WOOL.

Resolved by the House of Representatives (the Senate concurring), That there be printed a new edition of the special report of the Chief of the Bureau of Statistics of the Treasury Department relating to wool and the manufactures of wool, published by order of Congress in 1888, with the matter contained therein brought down to date, 3,000 copies for the use of the Senate, 6,000 for the use of the House of Representatives, and 2,000 for distribution by the Bureau of Statistics of the Treasury Department. (H. Mis. Doc. 94, Fifty-second Congress, second session.)

Passed House February 28, 1893; Senate, March 3, 1893.

TABLE OF CONTENTS.

	Page.
Letter of transmittal	3
Introductory report	5
Increased production of wool	5
Internal movements, sheep industry, Victoria	7
Increased consumption of wool	8
Scope of this report	9
Woolen industry	11
Wool production of the world	11
Sources of supply of wool	13
Depression of sheep interests	15
Domestic clip of wool	16
Distribution of sheep	18
Weight of fleeces	19
Commerce in wool	20
European imports of wool	22
Imports into the United States	23
Import prices of wool	24
Conclusion	25
Acknowledgments	26

APPENDIX.

SHEEP, WOOL CLIP, AND MANUFACTURES OF THE UNITED STATES.

Number of sheep by States, 1840 to 1890	32
Production of wool, 1840–1890	33
Number of sheep, by States, 1875–1894	36
Wool clip of the United States, 1866–1887	42
increased per cent, periods of five years	43
1886	44
1887	45
1889	46
1890	47
1891	48
1892	49
1893	50
Price of imported wools, 1867–1893	51
Wool manufactures, establishments, and capital invested	52
Hands employed and wages paid	53
Cost of materials used	54
Value of product	55
Woolen manufactures, 1880 and 1890	56
Price of wools in New York, 1824 to 1893	59
Philadelphia, 1865 to 1894	61
Exports of domestic wools, sheep, and manufactures, 1821–1893	85
Tariffs on wool and manufactures of, 1789–1890	87

LETTER OF TRANSMITTAL.

TREASURY DEPARTMENT,
BUREAU OF STATISTICS,
Washington, D. C., February 12, 1894.

SIR: In accordance with a joint resolution of Congress I have the honor to submit a report upon the production, commerce, and consumption of wools and manufactures of wools in the leading nations of the world. Naturally, the commercial features received the greater share of attention, and I have sought to obtain the latest returns having the weight of official authority. The tariff decisions alone constitute a valuable and necessary guide to understanding recent tariff legislation on wools and woolens, and its practical working; while the elaborate tables of imports and exports, of domestic and foreign prices, covering a period of nearly thirty years, give as complete a representation of the world's experience in wool as may be drawn from purely statistical sources. In collecting and publishing such facts I believe the Government performs one of the highest of its legitimate functions, for it thus brings home to its citizens the importance of the industry, whether measured by its direct or its indirect results; the wide extension and influence of its many branches; and the relative importance, commercially and industrially, of the great nations of supply and consumption. In tracing the great changes in the course of production and trade of raw wools from one continent to another, from one country to another, and even from county to county, the pressure and limitations of competition, foreign and domestic, may be described, and proper measures taken to grant every advantage to the domestic sheep-raiser that can be given consistently with the claims and rights of the other interests of the community.

It rests with the sheep farmers themselves rather than with the Government to assert and maintain a preeminence in the local or foreign wool market. The improvement in breed, looking either to increasing the average yield of wool, or to the meat qualities of the animal, a question that must be decided by each locality and according to the profits to be obtained, has been very marked among the sheep-raisers of the United States. American wool of the finer grades deservedly has held and holds a high reputation, and this has resulted from the

intelligent and judicious methods of our sheep-raisers. It is only by continuing such methods that they can hope to maintain this preeminence in quality, and no effort of Government can stave off or modify the effects of internal competition,—that is, the competition of one section of the country with other sections,—which is growing in intensity from year to year, and leading to a notable transfer of the wool-raising center, and to distinct changes in the general methods of sheep-raising. The best interests of the industry are not to be decided by confining the attention to domestic conditions. The same progress needed to sustain and advance the condition of the domestic sheep and wool interests, will react upon the conditions in foreign markets, and in favor of the United States, whenever it sees fit to enter into a free competition. It is in the experience of the world that the best lessons are to be found, and from them are to be drawn the policy and measures that in the long run will best subserve the continued advancement and prosperity of the wool industries of the United States.

Yours, respectfully,

WORTHINGTON C. FORD,
Chief of Bureau.

Hon. J. G. CARLISLE,
Secretary of the Treasury.

INTRODUCTION.

If there is any one fact demonstrated by the experience of the United States in the sheep industry it is the independence, in the long run, of this interest of artificial encouragement. It has survived the restrictions and prohibitions of the mother country in colonial times, the penalties and discouragements of hostile and interested legislation, as well as the progressive settlement of the country. It has followed economic law in spite of restrictions, bounties, and financial error, and is to-day still pursuing its natural course regardless of the complaints of low prices, destructive foreign competition, and unprofitable returns. From the middle of the seventeenth century, when the general court of Massachusetts requested "those having friends in England desiring to come, would write them to bring as many sheep as convenient with them, which being carefully endeavoured, we leave the successe to God," to the last decade of the nineteenth century, the rise, development, and internal movement of sheep-raising and wool-manufacturing industries have been logical in the great lines.

Opinions may differ on the cause of an increase in a certain direction; temporary advantage, as an embargo or war; the special favor of a tariff for protection or exclusion of competition, may have been more active at a certain period than an uninterrupted development on a normal basis; a locality naturally favored by geographical position or transportation facilities may have accentuated a prominence gained through invention or extensive employment of skilled labor and specialties of make; yet it may be asserted that the general trend of both industries would have been the same in the long run. The gradual removal of wool-raising as an industry to the west of the Mississippi, and still moving from the East to the West; and the establishment of manufactories in localities favored by natural and acquired advantages—water power, labor, and accessibility—have been controlled by no legislative enactment, however much the movements may seem to have been influenced in any particular year or by an accidental juncture of circumstance.

The increase in the production of wool has been enormous. In support of this may be cited a paragraph from Messrs. George William Bond & Co.'s annual wool circular, dated January 26, 1894:

> We shall find that the woolen industries of the world, and of this country in particular, have been marching forward and upward. In 1893 they are upon a plane so much higher than in 1860 that the products of the two periods cannot be considered

together. Therefore tariff legislation based on the conditions of that period are no longer applicable. On the other hand, the conditions of the wool supply have changed even more radically. Europe has yielded to the southern hemisphere the growth of fine wools. Russia alone shows an increase, whose product, like that of the countries east of her, is mostly of the carpet grade of wools, practically none of which are raised in this country. The European countries carry about the same number of mutton sheep as in 1860, notwithstanding the value of this wool product has been reduced one-half. In the United States the more recent increase in the sheep industry has been in the older Middle and Western States, and with mutton sheep. Careful husbandry is supplanting nomadic territory conditions, while the total American clip has increased three-fold in thirty years, the clip of Australia, under management most intelligent and scientific, has increased ten-fold. The ranch or estancia sheep husbandry of South America has increased nine fold in the same period, and that of the British possessions in South Africa five-fold. From without, this immense increase of clip in these purely agricultural countries has forced fine Ohio wool down to the prices of the last decade. No tariff duty has stayed or can stay this cause and effect. From within, the same influence has been exerted by the clips of the nomadic flocks west of the Mississippi, whose owners pay little or no rental upon the lands they occupy. California has not been able to hold her own against this competition, and her clip has gradually fallen from 56,550,000 pounds in 1876 to 33,000,000 to-day, about where it has stood for the last seven years.

Although Australia is cited as the marked example of an overwhelming increase in wool production—an increase so marked, as it is asserted, to have swamped the wool markets of the world and depressed wool prices in all woolgrowing countries—it is forgotten that there is continually acting in Australia the same influences leading to special and local decline and transfer of woolgrowing centers as in any other country. Australia no more shows a general or uniform advance than does any European country. The difference lies in this: That the elements contributing to an increased production have a wider field for play in Australia, or in any new country similarly situated, than in the older countries; that is to say, the capacity for growth is greater than factors of decline or decay. Taken as a whole, the wool product of Australia has increased; taken in detail, we find the same periods of ebb and flow, the same rapid rise and often equally rapid decline in the sheep industry of a town, shire, or borough. With all its wonderful capacity for sheep growing, the opening of new districts, and the utilizing of possibilities in new counties, affect often disastrously the actual sheep industries of the settlements older in point of time. The transfer of the sheep-growing industry from the Atlantic States to the States of the Mississippi Valley and from the Mississippi Valley into the Territories and newer States, finds its exact counterpart in similar transfer and movement in Australia.

In proof of this I call attention to the statement printed in the Appendix showing the number of sheep in the shires of Victoria on the 31st of March, 1883, by the census of April 5, 1891. I selected such shires as in 1891 contain more than 100,000 sheep. The total number of sheep in cities, towns, and boroughs of Victoria in 1883 was 43,486;

in 1891, 64,817, an increase of 49 per cent. The number of sheep in the shires was, in 1883, 10,113,521; in 1891, 12,628,026; an increase of 24.8 per cent. When the figures of each shire are compared, some notable decline is found in spite of the increase in the aggregate. Kolac decreased from 414,046 to 258,481, Kowree from 412,177 to 348,286, Lexton from 125,647 to 120,115, Marong from 117,962 to 99,107, Swan Hill from 338,752 to 309,290, Wannon from 445,116 to 423,385, and Wimmera from 252,534 to 171,693. The presumption is that in all the districts showing decline there was some element actively at work incapable of meeting the competition of newer districts—districts like Dunmunkle, which increased from 93,632 to 218,334; Korong, from 124,654 to 239,330; Mount Rouse, from 265,565 to 361,236, and Rosedale, from 11,018 to 157,948.

In order to emphasize this natural adaptation of a sheep-growing industry in Victoria to the conditions or economy most favorable to its development, I give in this place some of the more notable differences shown by the census of 1891 over the census of 1881.

Counties.	1881	1891
Anglesey	255,387	414,494
Bendigo	295,159	414,501
Borung	593,262	847,206
Bourke	353,543	360,547
Delatite	275,141	383,004
Dundas	978,515	997,725
Evelyn	24,671	22,867
Gladstone	256,851	415,474
Grant	497,905	512,538
Grenville	648,836	570,850
Gunbower	171,830	152,220
Hampden	874,619	953,079
Kara Kara	318,358	505,105
Lowan	714,268	637,294
Moira	247,750	362,620
Normanby	604,318	650,884
Polwarth	194,824	177,745
Ripon	663,771	706,952
Talbot	281,950	291,205
Tanjil	90,462	280,746
Tatchera	135,049	253,612
Villiers	786,392	912,920
Wonnangatta	5,315	59,136

Such comparisons speak for themselves and require no comment.

The same internal movement can be established for New South Wales, at present *the* sheep growing country of the world. If we look at the number of sheep in New South Wales by geographical divisions, we find the largest numbers of sheep in the western plains and on the western slopes of the east central and southern divisions. In 1892 these figures stood as follows: Western Plains, which include Balranald,

Wentworth, Wilcannia, Bourke, and Sturt, 15,379,178; the western slope of the southern division, which includes Hume, Albury, Murray, and Murrumbidgee, contained 10,593,813 sheep; the western slope of the east central division, which includes the Bogan, Forbes, and Grenfell, contained 10,039,701 sheep. As compared with the returns of 1886, these figures represented an increase for the Western Plains of 48·3; for the western slope of the southern division of 46·2, and for the western slope of the east central division of 106·3 per cent. In the few districts included in these geographical subdivisions is to be found nearly 66 per cent of the entire increase of sheep in the colony.*

Yet marvellous as has been the rapid rise of the sheep industry of New South Wales, there was experienced a severe set back in 1892.

INCREASE OF CONSUMPTION.

Articles of food and cotton excepted, wool deserves to rank first among the articles of "prime necessity" and of commercial interest. Not only is there an almost infinite number of conditions favorable to woolgrowing, resulting in a great variety of products,—each "fleece" even containing many differing qualities, each quality specially adapted for a single use,—but the commercial and industrial aspects are quite as noticeable by their variety and importance. Take the returns of imports into the United States of raw wools, and it is seen the quantity has increased since 1884 from 78,350,651 pounds to 175,636,041 pounds in 1893, an increase of 124.1 per cent. This increase is all the more notable as occurring in the face of legislation designedly hostile to imports of foreign wools, legislation which increased the average customs duties on these wools from 33.27 per cent in 1884, to 44.72 per cent in 1893. It occurred also when, whatever decrease in domestic production had been noted in intervening years, has been nearly made good in the last year for which returns are available—1892. In 1884 the wool clip from domestic animals was estimated by Mr. James Lynch to have been 337,500,000 pounds; in 1892, another authority using the methods placed it at 364,152,666 pounds. In 1884 the population of the country was 54,911,000; and in 1892, 65,403,000—estimates based upon actuarial averages. An increase of nearly 20 per cent in population has been accompanied by an increase of nearly 30 per cent in wool consumption—a comparison that speaks for itself.

*See appendix for details.

The relation of production to wool consumption in the United States since 1860 may be further illustrated by the following comparisons:

QUANTITIES OF WOOL PRODUCED AND CONSUMED, BY DECADES, FROM 1860 TO 1890, AND FROM 1890 TO 1892—PER CENT OF INCREASE.

Years.	Production.	Consumption.
	Pounds.	*Pounds.*
1860	60,264,913	85,334,876
1870	162,000,000	209,367,254
Increase	101,735,087	124,032,378
Per cent	**168·81**	**145·35**
1880	232,500,000	356,791,676

If the commercial statistics of other countries be examined, even more striking evidences of the progress of this industry are to be found. In 1892, as in 1884, the United Kingdom occupied a dominant position in the commercial activity in wool. In 1884 the quantity of wool (sheep, lamb, alpaca and the llama tribe) imported was 526,526,661 pounds, of which 249,607,588 pounds were exported; in 1892 the imports were 743,046,104 pounds and the exports 430,105,121 pounds. There has been no decrease in late years in the English wool clip to account for such figures; in fact, there has been an increased clip coupled with a decrease in the number of sheep. In 1891 the number of sheep and lambs in Great Britain was returned at 28,732,558; and in 1893 at 27,280,334. The wool clip in 1890 was placed at 138,000,000 pounds, and in 1892 at 153,000,000 pounds. This points to a profitable attempt to improve the breed of animals, and the weight and quality of the fleece—profitable, because it has been accomplished in the face of competition with the wool-raisers of the world, and under conditions that are accepted and urged by many of the woolgrowers of the United States as distinctly and fatally disadvantageous.

SCOPE OF THIS REPORT.

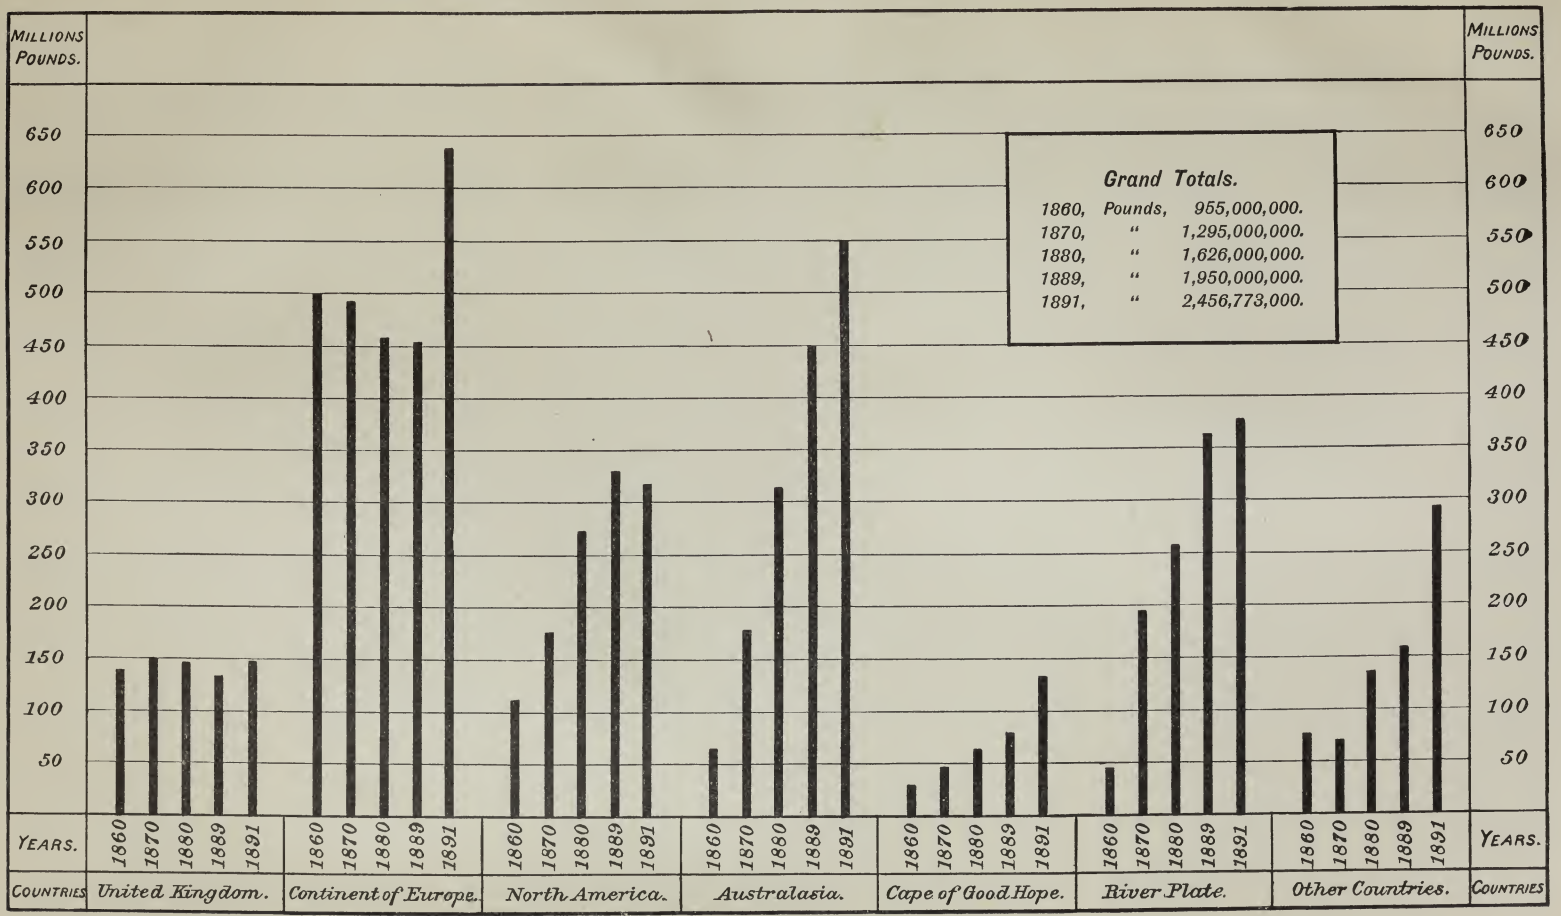
There are so many points of interest arising out of such an industry—from the sheep farm to the marketing of the manufactured product—that I intend to restrict the extent of this report to the commercial features. Nearly the entire wool product of commercial and industrial coun-

tries may be said to come into the markets first or last. It is not consumed on the farm in any appreciable quantities; its use in household industries is confined to a few countries where the development of a woolen industry is in an embryonic condition, and where statistics of production are still so imperfect as to make even an estimate next to impossible. It is a merchantable commodity the world over, and in spite of an enormous increase in production and facilities for marketing, the demand has kept pace with the supply, and for no long period has there been a congested condition of the general markets when stocks have proved unsalable and steadily increased to swamp the sale. I repeat, first or last, the great bulk of wool grown enters the markets, either in a raw or manufactured condition, and is thus made a matter of record and statistical inquiry. It is, therefore, the commercial aspects I shall examine most critically, the imports and exports of wool and its manufactures, and the sources of supply and direction of commerce.

To show as fully as may be the tendency of this increasingly important commerce, the inquiry is made to extend over a period of ten or more years, by which the rise or fall of sources of supply and demand may be better understood and a change from an indirect to a direct trade noted. This inquiry must touch upon the sheep-raising industry in each of the leading woolgrowing countries, but it is not pretended that the conditions applying to sheep-raising are treated exhaustively or that a definite comparison of advantages or disadvantages is instituted. Such a comparison is out of the question. In one country sheep-raising may be a secondary occupation, merely subsidiary to other agricultural employment. The question of profit may be balanced between meat and wool, or it may not enter into the operations of the year in any immediate form. In another, sheep-raising may be a dominant industry and wool the only product sought. To undertake a comparison between such extremes would be like comparing the product of a pair of knitting needles with that of a power loom or knitting frame. At the other extreme, I shall not undertake to pass upon the woolen industry. Each country engaged in manufacturing woolens has its special product, the result (it may be) of local conditions, a particular sort of wool fiber, an inherited skill in handling, a trained sense of color and combination of colors, and a hundred other such matters on which there can be no general conclusions. A natural advantage, like climate, is as powerful a factor in determining the situs of the industry as an artificial or acquired advantage, like reputation, good will, or trained skill. So, also, each market demands its specialities, and fashion and taste dictate what shall be the product and whence it shall be obtained.

The question of relative wages earned in the different countries offers insuperable difficulties. Hardly two mills in the same country are situated in precisely the same conditions or circumstances, and in different

THE WORLD'S WOOL SUPPLY SINCE 1860. (WOOL BOOK, 1892.)



countries so many other varying distinctions escaping exact measurement enter into the problem, as to defy scientific analysis and comparison. Even when gauged by results—the product in yards for each worker—many exceptions or modifying statements must be made. Such are the difficulties in gauging the wages received by the output or capacity of the worker, in gauging the industrial activity and reward of the wage receiver, as to render a general comparison between a laborer in Italy, for example, with what purports to be a laborer in the same relative employment in England or the United States, outside of economic possibility. Such a comparison would be mere guesswork. The problem is further complicated by the question of real wages and nominal or money wages. The cost of living must be decided before the actual compensation of the workingman can be known, and in this there is quite as wide a field for differing conditions as in the earning of the wages. After a most exhaustive examination, Mr. Carroll D. Wright, U. S. Commissioner of Labor, could show that the difference (averaged) in earnings and expenditure between a family in Europe and one in the United States was barely 3·2 per cent. The American can save 11·6 per cent and the foreigner 8·4 per cent of his income. I quote the conclusion of Mr. Wright in full:

Table XXIV, with subtables from A to H, inclusive, gives a recapitulation of cost of living by states, both American and European, for the woolen industry, in the same way that has just been recited for the cotton industry. The general conclusive features only will be stated. The income per family from all sources in the woolen industry, 911 families in America being considered, was $663.13, while in Europe, for 334 families, it was $449.58. The total expenditures for all purposes for the American families was $594.09, and for the European families $414.73. Five hundred and eighty-three American families had saved during the year, on an average, $136.16, while 268 families experienced a deficit of $61.49 each on the average. Two hundred and nineteen of the European families saved $67.67 each, and 72 showed a deficit of $44.16.

WOOL PRODUCTION.

If we examine the official returns of the number of sheep and lambs in European countries, the fact is developed that in no instance has there been an increase since 1875. Such a general decrease occurring under so many different conditions, points to a general cause, working as well in spite of legislative attempts to foster the industry of wool-growing as in the face of a perfect freedom from any such attempts. This cause is one that is readily recognized as economic, and in consequence not to be stayed by artificial conditions save at such a cost as to imperil the existence in these countries of the important wool manufacturing interests, and in many instances a valuable export trade dependent upon a full and free market for the raw materials used in this manufacture. The question of sheep raising is decided as any other agricultural operation is determined—by the profit to be gained, and under modern conditions the farmer who has a small flock of sheep and regards them as a subsidiary contribution to his farming operations,

can not compete with the man who has large flocks, practically unlimited grazing ground, and no other interests to interfere with his attention to his sheep. Woolgrowing, as a great industry is of very ancient date; but it is an industry suited to certain stages of economic development of a country, and is rendered unprofitable where land is in demand for intensive culture, where population is comparatively dense, and where, in short, the pastoral has not given place to the industrial stage.

In support of this proposition the statistics of individual countries are full and almost unanimous—the exceptions being due to some local advantage or artificial stimulus. I would also quote from a report made to the Department of State in February, 1892, by United States Consul-General Bourn, based upon a publication of the Italian Government prepared and printed under the direction of Luigi Bodio:

With an increased density of population in Europe there has been a gradual decrease in the number of sheep, as lands formerly used for pasturage were converted into tillage lands to meet the increased demand for food. From 1860 to 1890 the population of Europe increased from 286,000,000 to 356,000,000, an increase of 70,000,000, or about 25 per cent, necessitating a tillage of at least 25 per cent more land to supply food for this increase. During this period the number of sheep in Europe decreased from 229,600,000 in 1860 to 192,240,000 in 1890, a decrease of 37,000,000, or about 16 per cent, while the number in the chief extra-European wool producing and exporting countries increased from 63,200,000 in 1860 to 264,500,000 at the date of the latest estimates. But Europe in 1890 consumed fully 66 per cent more wool than in 1860, while there were 16 per cent less sheep to supply the requirement. .It is easy, therefore, to see why new fields have been sought in other continents for the deficiencies both in food and clothing.

In 1860 there were not to exceed 40,200,000 sheep in the La Plata country, Australia, and South Africa, or scarcely 18 per cent of the number in Europe. In 1890 this amount had increased to 221,500,000, or about the number in Europe in 1860. There were 8,806,500 sheep in Italy in 1860, but in 1875 there were only 6,977,000. The number then grew again to 8,596,000 in 1881, to be again reduced to 6,900,000 in 1890, a decrease of 21 per cent since 1860, as compared with 16 per cent decrease for all Europe. In the United States the process has been substantially the same. The increasing density of population in the East has gradually driven the flocks westward into newer territory, where they have largely increased, though not so rapidly as in the La Plata country, Australia, and South Africa. From 23,000,000 in 1860 they increased to 41,000,000 in 1870. At this time the market for wool was so depressed that the farmers found it profitable to kill upwards of 9,000,000, thus reducing the amount to 31,000,000. Since then the gradual increase brought the number to above 50,000,000 in 1884, to be again reduced by the competition of Australian wool to about 43,000,000 on January 1, 1891. This variation in the number of sheep has, however, its compensation in the greatly increased production per head. The yield in 1871 was about 5 pounds for each sheep, while in 1884 and 1891 it was, respectively, about 6 and 7 pounds.*

The centers of wool production have, therefore, gradually shifted. Prior to 1818 Spain was the principal source of supply of merino wools, a position held by that country for centuries, the sheep being descended from the stock brought to the peninsula by the Romans. England

* In the appended tables will be found two estimates of the number of sheep in the leading nations of the world.

obtained the foreign raw material for her woolen manufactures from Spain. In 1802, of a total import of 8,600,000 pounds, 6,000,000 pounds were obtained from Spain. In 1800 the domestic wool clip of England was estimated at 96,000,000 pounds. Early in the nineteenth century the Spanish influence began to decline, supplanted by the Saxony and Silesian wool, also a product of the merino stock. Later, about 1840, the merinos of Australasia began to supersede the German wools in the European market; and to-day it is the Australasian continent that raises the largest quantity of wools.

This shifting of the principal source of the supply for raw wool may be seen by an examination of the returns of wool imported into the United Kingdom since 1844, as given in a table in the appendix. It becomes clearer when the per cent of these total imports contributed by different countries at different periods are compared. The decline of Germany and South America in the English wool imports is notable when placed side by side to the increase of Australasia and the British possessions in South Africa.

	1844	1850	1860	1870	1880	1890
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*	*Per cent.*	*Per cent.*

In 1887 the Statistical Institute of Amsterdam* prepared an estimate of the world's production of wool. This estimate, reduced to pounds, gave a total of 2,060,493,800 pounds, distributed as follows:

	Pounds.
Australasia (1889)	535,436,000
Russia (1878)	390,548,800
Argentine Republic (1882)	244,666,040
United States (1882)	233,073,000
United Kingdom (1882)	127,942,200
France (1879)	90,319,920
Spain (1878)	66,120,000
Germany (1881)	54,879,600
Cape Colony (1881)	42,427,000
Uruguay (1880)	41,369,080
Hungary (1880)	35,682,760
British India (1881–'82)	21,400,840
Italy (1874)	21,378,800
Asiatic Turkey and Persia	13,224,000
Natal (1881)	12,496,680
Austria (1881)	10,909,800
Portugal	10,358,800
Belgium (1865)	4,408,000
British North America (1881)	3,570,480
Sweden (1870)	3,306,000
Other countries	96,976,000
Total	2,060,493,800

In the same year (1887) was published another estimate by the eminent statistician, Dr. F. X. von Neumann-Spallart, which did not differ greatly in the aggregate from the result obtained by the Amsterdam Statistical Institute, though the details in many cases show radical and irreconcilable discrepancies.

Countries of production.	Quantities produced.
Europe:	*Pounds.*
Russia (1884)	262,966,000
Great Britain and Ireland (*a*) (1885)	135,936,000

All other Europe	8,818,000
Total Europe	702,654,000

a Estimate by the "Bradford Observer."

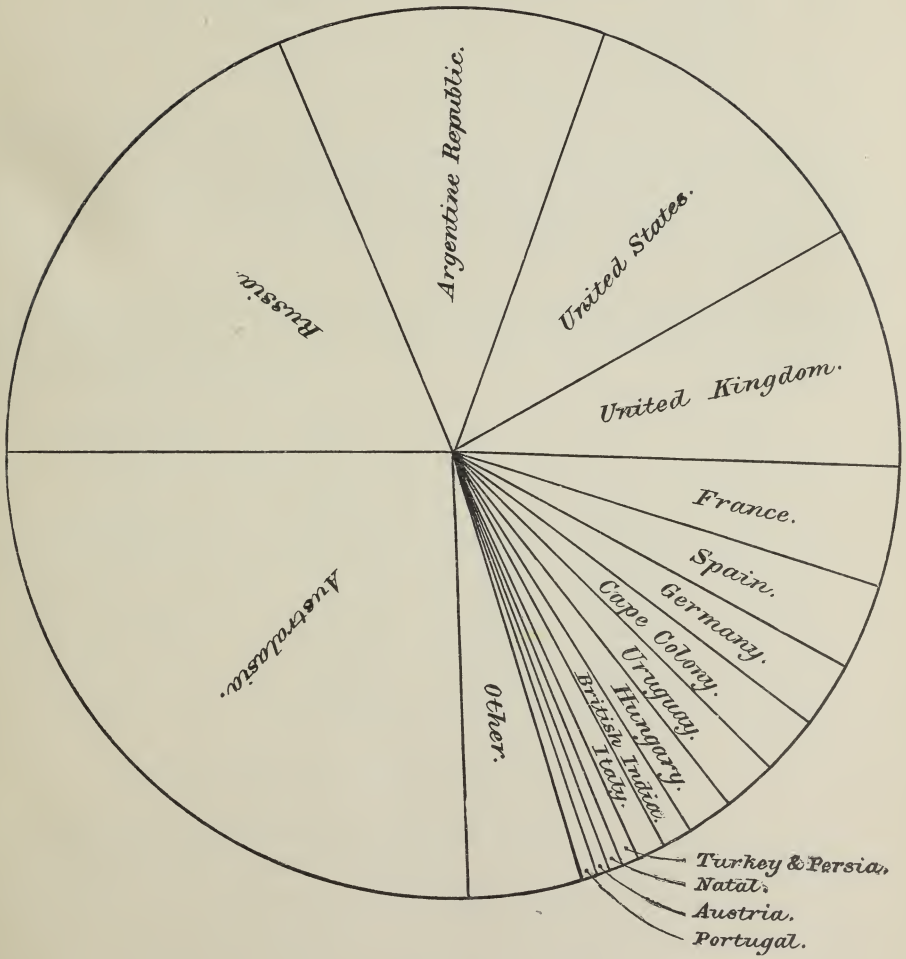
b An estimate of 3·9 pounds of wool per head of 17,000,000 sheep.

c Estimated from the export accounts.

d Estimate of 3·9 pounds of wool per head on the whole number of sheep in Hungary, Croatia, and Slavonia.

*See Bijdragen van het Statistich Instituut, Amsterdam, 1887, p. 19, there given in kilograms, and reduced to pounds in Hayter's Victorian Handbook, 1890–'91.

WORLD'S PRODUCTION OF WOOL.



Countries of production.	Quantities produced.
North America:	*Pounds.*
United States (1884)	307,588,000
British North American provinces (1884)	4,409,000
South America:	
Argentine Republic (exports 1885)	283,047,000
Uruguay (exports 1884)	59,084,000
Asia and Australasia:	
Australasia (*a*) (exports 1885–'86)	455,470,000
British East Indies (exports 1885–'86)	23,126,000
Turkey, Asiatic, and Persia (estimated)	13,228,000
Africa:	
Cape Colony (exports 1885)	29,299,000
Natal (exports 1885)	17,306,000
All other countries (*b*)	88,185,000
Total production (*c*)	1,983,396,000

a From the estimates of "Export," 1886.

b Estimate by Jacoms, Son & Co. Includes wools from Brazil, Chile, Algiers, Egypt, Tunis, etc.

c Only a few countries have attempted to collect statistics of the actual production of raw (unwashed) wool. The usual method of arriving at the annual production is a valuation based on the average yield of wool per head of the whole number of sheep in the country. This table must, therefore, be regarded as a "general view" and does not claim to be accurate as to the several amounts of wool produced.

The following table, showing the estimated wool supply of the world since 1860, put forth by the London Board of Trade, is not without interest in this connection:

Sources of supply.	1860	1870	1880	1889
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
United Kingdom	140,000,000	150,000,000	149,000,000	134,000,000
Continent of Europe	500,000,000	485,000,000	450,000,000	450,000,000
North America	110,000,000	176,000,000	270,000,000	330,000,000
Australasia	60,000,000	175,000,000	308,000,000	450,000,000
Cape of Good Hope	26,000,000	43,000,000	60,000,000	70,000,000
River Plate	43,000,000	197,000,000	256,000,000	360,000,000
Other countries	76,000,000	69,000,000	133,000,000	156,000,000
Grand total	955,000,000	1,295,000,000	1,626,000,000	1,950,000,000

DEPRESSION OF SHEEP-RAISING INTERESTS.

That the sheep-raising interests of the world are passing through a period of depression is not to be denied. The low prices of wools have reacted upon the production by reducing profits derived from wools and diminishing the temptation to extend the production. Was this depression local, local remedies would apply; but it is general, and affects those countries where the advantages for sheep raising excel as well as those where woolgrowing is a secondary matter and a by-product rather than an industry. In 1880 the number of sheep in the United States was 35,192,094; in 1890 it was 35,935,364, an increase of only 2 per cent. These are census figures. The Department of

Agriculture estimated the number of sheep in 1890 at 44,336,072, and in 1893 at 47,273,553, an increase of 6·6 per cent. Compare these percentages with the increase of sheep in what is the great sheep country of the world—New South Wales. From 1880 to 1890 the number of head increased from 35,398,121 to 55,986,431, or 58·1 per cent.

Certainly the mere mention of such figures is sufficient to demonstrate the preeminent advantage in sheep raising possessed by such a country over all rivals; yet the record is not entirely one of progress. In 1891 the number of head of sheep had risen to 61,831,416, and in 1892 had fallen to 55,445,289, or lower than it was in 1890. Nor is this economic evidence of depression confined to New South Wales. In 1890 Victoria contained 12,692,843 sheep, and in 1891, 12,928,148, an increase of 1·7 per cent. From 1891 to 1892 the increase was merely nominal, only 37,158 head. South Australia returned 7,050,544 sheep in 1890; 7,745,541 in 1891; and 7,152,047 in 1892. In the two years the number of sheep has hardly increased. Western Australia has suffered even more heavily. In 1890 the highest number was reached, 2,524,913 head. In 1892 it had fallen to 1,685,500 head, a decrease of one-third.

Nor is the result different when the quantity of wool exported from these countries is taken as a basis for estimate, instead of the number of sheep. In 1891 the exports of wool from New South Wales reached its maximum, 340,691,382 pounds, a quantity 37,000,000 pounds larger than the total clip of the United States. In 1892 the exports fell to 323,052,014 pounds, or about 10,000,000 pounds less than the wool clip of the United States in that year. The exports of wool from Victoria slightly increased, from 164,805,907 pounds in 1891 to 165,590,377 pounds in 1892. South Australia sold in the markets of the world 66,977,214 pounds in 1891, and 63,868,922 pounds in 1892. Tasmania also gives its evidence on the point under discussion, exporting 9,378,173 pounds in 1891, and 8,437,931 pounds in 1892. New Zealand increased its exports by 12,000,000 pounds, Queensland by 15,000,000 pounds, and India by 1,400,000 pounds. Against these may be placed a decrease in the exports from the Cape of Good Hope, 5,200,000 pounds, and from Natal more than 6,000,000 pounds. No better proof could be adduced of the general depression affecting sheep raising as an industry the world over. It should further be considered that these figures are based upon the returns for 1892 and do not show the still greater narrowing of demand and markets that the progress of the depression developed in 1893. In the light of such comparison the returns of the sheep and wool product in the United States mark a relative prosperity.

DOMESTIC CLIP OF WOOL.

The production of wools in the United States for each year since 1872 has been estimated by methods which commend themselves to scientific criticism. The figures in the following table from 1872 to 1888 were compiled by Mr. James Lynch, of New York; those for 1889

and 1890 are by Mr. Joseph P. Truitt, of Philadelphia. The returns for 1891 and 1892 were prepared by Mr. S. N. D. North, while the figures of the last two years are compiled from official returns on the same bases as were employed in the estimates of the previous years. The table as it stands (the line of increase per cent excepted) was taken from the annual circular of George William Bond & Co., of Boston. In the appendix to this report will be found Mr. Lynch's figures more in detail and with different combinations, as submitted from time to time in tariff hearings before Congress. Mr. Truitt's and Mr. North's estimates will be found in full as far as can be supplied.

Years.	Fleece, tub, and pulled.	California, Oregon, etc.	Texas.	Territory.	Southern and South-western.	Total product.

1893	184,970,150	56,898,508	26,007,806	72,734,273	23,541,929	364,152,666
Increase, per cent	54·1	137	188·9	2,324·4	488·5	127·5

If we examine the diagram based upon this table we notice an unexpected difference in the development of the wool clip in different parts of the country. In 1872 what is described as "fleece, tub, and pulled wool," which answers to the division in Mr. Lynch's table, "Iowa, Missouri, Minnesota, and States east of the Mississippi, except lower southern," constituted 75 per cent of the total wool clip of the country. In 1893 it constituted only 50·8 per cent of the total clip. Yet the returns of that particular description of wool in 1893 was greater than in any previous year of record. In the twenty-two years covered by the estimates the fluctuations have been wide, reaching minimum limits in 1876 and in 1891, and maximum points in 1884 and 1893. The decline in 1876 was the effect of the commercial and financial depression which followed the crisis of 1873. The cause of the decline that followed

1884 was undoubtedly domestic competition from other sheep-growing regions of the country. No general conclusion, based upon the probable effect of tariff legislation, will apply with equal force to the production of wool geographically considered. The marked decline in "fleece, tub, and pulled wool" from 1884 to 1891 was nearly compensated by the increase in the clip from other regions. If, therefore, there was a generally adverse condition, applicable to the growth of wool in this country, it should have acted in as marked a manner upon all and every description of wool, and not have been confined as it were to locality or to special grades. The conclusion is inevitable that what depressed the wool clip in the fleece, tub, and pulled region was generally favorable to the wool grown in the Territories. The conclusion is emphasized by this apparent course of the clips since 1891: while fleece, tub, and pulled wool has taken a new start, Territory and Texas wool have declined.

This question of geographical distribution of sheep and product may be studied a little more in detail. From Dr. Salmon's History and Present Condition of the Sheep Industry of the United States I take a comparison which shows in parallel columns the sheep and wool industries of the States east and of those west of the Mississippi and the different course in each division:

Years.	East of Mississippi.		West of Mississippi.	
	Sheep.	Wool clip.	Sheep.	Wool clip.
	Number.	*Pounds.*	*Number.*	*Pounds.*
1840	18,807,779	35,102,584	503,595	699,530
1850	20,095,661	50,014,074	1,627,559	2,502,885
1860	18,052,224	51,791,194	4,419,051	8,473,719
1870	21,058,684	77,364,569	7,419,267	22,737,818
1880	20,375,894	95,977,649	14,816,180	59,704,102
1890	16,988,441	85,605,617	27,347,631	190,394,383

Thus, in 1840, the States east of the Mississippi held 97·4 per cent of the total number of sheep. In 1890 they contained only 38·3 per cent. In 1840 these States grew 98 per cent of the wool clip. In 1890 they grew only 31 per cent. The variations in the interim will be shown by the following table:

PERCENTAGE OF SHEEP AND OF WOOL CLIP, AND ALSO THE AVERAGE YIELD OF WOOL PER SHEEP, EAST AND WEST OF THE MISSISSIPPI, IN THE GIVEN YEARS.

Years.	East of Mississippi.			West of Mississippi.		
	Sheep.	Wool.	Yield per sheep.	Sheep.	Wool.	Yield per sheep.
	Per cent.	*Per cent.*	*Pounds.*	*Per cent.*	*Per cent.*	*Pounds.*
1840	97·39	98·01	1·866	2·61	1·99	1·389
1850	92·51	95·23	2·489	7·49	4·77	1·537
1860	80·33	85·94	2·869	19·67	14·06	1·918
1870	73·95	77·29	3·674	26·05	22·71	3·067
1880	57·90	61·65	4·710	42·10	38·35	4·030
1890	38·32	31·02	5·639	61·68	68·98	6·962

NUMBER OF SHEEP IN THE UNITED STATES, 1875–1894. BY GEOGRAPHICAL DIVISIONS.

This comparison is deceptive if we accept it as it stands. The large number of sheep in the East raised for mutton only reduces the average fleece per sheep. In summarizing the sheep industry east of the Mississippi, Mr. Ezra A. Carman wrote, in 1892:

Up to within a comparatively recent day the principal aim of sheep husbandry in the section considered was the growth of wool. Mutton was a secondary consideration, and, in general, was not considered at all. But the decreasing profits of woolgrowing and the increasing popularity of mutton as an article of food in the manufacturing centers and large cities effected a change in the east forty or fifty years since, and the mutton sheep received some attention; the old native breed and the fine-wooled merino and its grades were crossed by rams of improved breeds of English sheep. This substitution began in southern New England, eastern New York, eastern Pennsylvania, New Jersey, Delaware, Maryland, and Virginia, and in those sections is practically complete, mutton being the object of sheepraising and wool a secondary consideration. Up to 1880, in the country north of the Ohio and west of the Alleghanies, woolgrowing was stlll the principal object. Within the last ten years western Pennsylvania, Ohio, Indiana, Illinois, Michigan, and Wisconsin have been repeating what was done by the East many years before, making great changes by replacing the Merino and its grades with English sheep, so that, in 1890 over one-half of the sheep between the Alleghanies and the Mississippi River were estimated to be of native or English blood. The change in the two years past in the same direction has been very marked. In all the South Atlantic States, Kentucky, and Tennessee the English mutton sheep, represented by the old native stock and some improved breeds, is vastly predominant. Taken as a whole the entire country east of the Mississippi is practically abandoning to the far West and to foreign countries the growing of fine wool, and substituting therefor the raising of sheep for food, and, incidentally, combing wool. This change in the character of the industry has caused increased attention to English breeds of sheep and English methods of sheep husbandry.*

In the appendix will be found a table showing the number of sheep in each State as estimated by the Department of Agriculture in each year since 1875. It affords a ready means of measuring the progress or decline in each State and at the same time affords a crude indication of the stress and pressure of competition, with consequent internal movement in States and geographical divisions. The testimony is cumulative on this point, that local interests and conditions are stronger than any general condition or influence, and that the wool industry is controlled by the same natural economic laws in the United States as in other countries, and is subjected, if at all, to a very limited extent, to an artificial stimulus or disadvantage.

WEIGHT OF FLEECES.

Coupled with the decrease in the number of sheep, there has been a notable increase in the average weight of a fleece. The average weights of American fleeces have just been given.

In the English sheep, Prof. Low, in 1845, estimated the average weight of a fleece to be 4·5 pounds ; Mr. J. A. Clarke, in 1878, placed it

* "Special Report on the History and PresentCondition of the Sheep Industry of the United States," 1892, U. S. Department of Agriculture.

at 5·5 pounds; and the Bradford Observer, in 1882, at 5·75 pounds. The weight will differ from season to season by as much as a quarter of a pound; and much more widely according to sheep and pasture. In Wales the mountain fleece will yield from 1½ to 2½ pounds; and the lowland, from 5 to 7 pounds. The Irish mountain fleeces vary from 3 to 5 pounds, and the Roscommon from 10 to 12 pounds. The average for Ireland is from 6 to 6½ pounds. In 1869 the average weight of Australian fleeces was given at 3·75 pounds, and at 3·65 pounds for Cape fleeces.

COMMERCE IN WOOLS.

Such estimates of production must be more or less of a general nature, and can show only the barest outline of the subject. Nor is the degree of accuracy any greater when the commerce of the world in wool is considered. There is a liability of counting the same trade two or even three times. An export of Australian wools may pass through the trade returns of the United Kingdom, France, or Holland before it reaches the place of consumption. Then, wools are exported in so many conditions—unwashed, washed, scoured, or unscoured. One pound of washed wool may represent two pounds of unwashed; the difference in scoured and unwashed wools is even greater, and varies with the nature of the sheep farm, the manner of treating and marketing wools.

The confusion of commercial nomenclature is also an almost insuperable obstacle to a general table that shall be accurate. In taking the exports from eastern countries we have the results expressed in pounds, bales, bundles, and packages, and no common denominator. Mr. North, in the "Wool Book" of 1892, prints a table giving the average weights of bales of wool, and I insert it to show how wide the limits are:

DOMESTIC.

	Pounds.
Ohio, per bag	200
Michigan, per bag	220
Indiana, per bag	175
Texas, per bag	210
Utah greasy, per bag	325
Montana greasy, per bag	290
California scoured, per bale	400
California greasy, per bale	500
Eastern Oregon greasy, per bale	540
Valley Oregon greasy, per bale	520
Territory, per bale	300

FOREIGN.

Australian, per bale	350
New South Wales greasy wool, average per bale	400
New South Wales scoured, average per bale	260
Cape, per bale	400

	Pounds.
Cordova, per bale	1,000
Montevideo, per bale	1,000
Donskoi, per bale	500
Donskoi washed fleeces, per sack	200
Donskoi unwashed	300
English combing, per sheet	600
Scotch carpet, per sheet	600
Scotch carpet, per bag	250
Aleppo, per bale	
East India:	
Karadi, Bagdad, Turkish and Levant	350
River Plate	800

English wools vary from 500 to 600 pounds.

In the diagram prefixed to this report, prepared upon a carefully minute study by Mr. W. Burchard, of this bureau, an attempt is made to show the exports in 1891 from wool-producing countries and the special imports into wool-consuming countries—such imports representing the quantities that actually passed into consumption or manufactures. In this way the difficulty arising from a repetition of commercial figures was largely obviated, and the general accuracy may be substantiated by the reasonably close approximation of the aggregates of imports and exports, the difference being 0.78 per cent of exports. That diagram is based upon the following figures:*

WOOL, RAW, IMPORTED AND EXPORTED INTO AND FROM PRINCIPAL COUNTRIES DURING THE YEAR 1891.

Countries.	Imports.	Exports.
Europe:	*Pounds.*	*Pounds.*
Austria-Hungary	58,807,400	15,441,136
Belgium	92,757,746	----------
Denmark	4,147,226	2,896,579
France	429,197,395	92,026,370
Germany	364,513,160	64,462,640
Italy	19,782,400	----------
Netherlands	114,514,400	89,665,840
Portugal (1890)	19,582,620	3,054,040
Roumania	----------	7,513,757
Russia	16,389,400	64,665,352
Spain	5,453,800	10,461,000
Sweden and Norway	6,781,146	----------
Switzerland	9,367,620	2,519,880
United Kingdom	335,789,414	50,031,300
North America:		
Canada	----------	1,131,802
United States	119,390,280	291,922

* It should be stated that no attempt is made to assimilate wools in the various conditions of marketing. The totals include all wools, whether washed, in the grease, or scoured.

WOOL, RAW, IMPORTED AND EXPORTED INTO AND FROM PRINCIPAL COUNTRIES DURING THE YEAR 1891—Continued.

IMPORTS INTO THE UNITED STATES.

The earliest statistics of the imports of raw wools into this country are to be found in a report of the Secretary of the Treasury, in answer to a resolution of the House of Representatives, transmitted January 28, 1822. In the letter of transmittal he said:

It is my duty to state that at the time the forms were prescribed, under the act of 1820, it was not known that wool to any considerable extent was imported. That article will hereafter appear in the statements which will be annually rendered of the commerce and navigation of the United States.

As further showing the little commercial importance of wool in that time, an extract may be quoted from a letter of the Register of the Treasury Department, in whose office the crude statistics of trade were filed:

The statements are, however, necessarily imperfect, from the following circumstance communicated by the collector of New York: That it is considered impracticable to furnish the information required from that office. Wool being subject to an ad valorem duty the value is only required to ascertain the duty; the weight and price per pound is on the invoice, which is the property of the importer and not retained as a custom-house document. A similar difficulty occurs in relation to the weight of wool exported.

The following figures, therefore, represent the first attempts to collect wool statistics and are necessarily very imperfect, being confined to such facts as could be obtained from the collectors of customs under no general plan:

IMPORTS.

	1817		1818		1819		1820		To Sept. 30, 1821	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Pounds	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*
Angora goats, camels, vicuña, red, or other, free of duty	6,600	6,189	1,500	226	1,700	1,407	.....	.....	2,622	2,250
Sheep or lambs, merino or common, washed or unwashed; duty, 15 per cent	2,272	1,883	.....	.....	1,192	479	106,788	24,965	334,333	93,829

EXPORTS.

	1817		1818		1819		1820		To Sept. 30, 1821.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Angora goats, etc.,	*Pounds*	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*	*Pounds*	*Dollars*
to Smyrna	.....	.....	.....	.....	.....	.....	.....	.....	900	900
Sheep or lambs, etc.:										
To England	2,881	.....	18,542	.....	3,465	.....	.....	.....	.....	.....
To France	4,200	.....	318	.....	.....	.....	.....	.....	.....	.....
Total	7,081	3,540	18,860	11,242	3,465	1,386	.....	.....	900	900

The total imports of sheep's or lamb's wool, 384,333 pounds, in the first three quarters of 1821, shown in the above statement, were derived from the following countries:

Brazil	132,961
Spain	109,388
Sweden	53,000
Turkey	34,227
England	30,600
Denmark	9,041
Hanse Towns	7,917
Portugal	7,199
	384,333

The interest in these early figures lies in the predominance of imports from Brazil and Spain, a reminiscence of the great influence at one time exerted by Spanish wool in the leading wool markets of the world and of the importance at that early date of the South American possibilities of supply. Beginning with the year 1822, we have official statements of the imports of wool, and these have been collected in a table printed in the appendix.

IMPORT PRICES OF WOOLS.

A noteworthy fact is shown by a comparative study of the import prices of raw wools as declared upon entry into the United States and the United Kingdom—that the buyers of the United States do not seem to have benefited by the fall in price to the extent that English buyers have. Let us parallel the import prices per pound in the two countries since 1884:

Years.	United States.	United Kingdom.
	Cents.	*d.*
1884	16	12.09
1885	14	10.05
1886	13	9.08
1887	14	10.15
1888	15	9.77
1889	14	9.80
1890	15	10.30
1891	14	9.36
1892	33	8.74

The fall in the United States prices from 1884 to 1892 has been 18·7 per cent; in the English prices, 27·7 per cent. If a further analysis of the American prices be made it will be found that the import prices of wools of class 1 fell 17·4 per cent; of class 2, 4·1 per cent, and of class 3, 23 per cent. Of the imports in the two years the per cent of each class of wool was:

	1884	1892
Class 1	23·6	28·7
Class 2	5·1	4
Class 3	71·3	67·3

The heaviest falls in prices occurred in the wools most largely imported, but in neither instance was the fall as great as in the wools imported into the United Kingdom.

The English returns are for the calendar year 1892 and those of the United States for the fiscal year ending June 30, 1892. The English returns therefore included the fall in prices that occurred in the six months following the close of the (United States) fiscal year. The difference can not be given accurately, and the only comparison possible is to quote the import prices for imported wools in the (United States) fiscal year 1893 with the prices of 1892:

	1892	1893	Decrease since 1884.
	Cents.	*Cents.*	*Per cent.*
Wools of class 1.....pounds..	20	19	17·2
Wools of class 2.....do....	23	22	8·3
Wools of class 3.....do....	10	8	38·4
All.....do....	13	11	31·2

CONCLUSION.

A careful study of the tables contained in the appendix will lead to the following conclusions:

(1) That no commercial and industrial nation is self-sufficient in its supply of wool, or ever has been since machinery was first employed in the manufacture of woolens.

(2) That the sheep-growing industry is subject to the same fluctuations of prosperity and depression that affect every other industry.

(3) That neither woolgrowing nor wool manufacturing is a local industry, unless shut in by artificial restrictions on the free movement of exchange of the raw wool or manufactured products.

(4) That such restrictions are rarely placed upon the raw wool, but are generally upon the manufactured products. No other nation of

commercial and industrial importance imposes as high duties on wool and woolens as the United States.

(5) That no legislation, short of prohibition of foreign competition, has availed to maintain prices in the face of the rapid increase in the world's supply.

(6) That prices of domestic and of imported wools have ruled higher in the last ten years in the United States than elsewhere; but this has not proved of advantage to either woolgrower or manufacturer of woolens.

(7) That the present depression is as marked in Europe, Asia, and Australasia as in the United States, and can not, therefore, be due to any local factor or condition applying only to the United States.

(8) That foreign nations possessing wool-manufacturing industries gain by a free choice of wools in a free market.

(9) That the experience of European nations would show that the free entry of foreign wool has not destroyed their sheep-raising industries; that no outside competition has or can completely destroy it, or even injure it in the long run, where reasonable effort is made to maintain quality of clip.

(10) That the shifting of wool-producing centers—meaning by the center the country of wool production dominating the commercial markets—is inevitable, and can not be stayed or prevented by legislation.

(11) That wool raising is controlled by the same economic conditions as any other interest, agricultural, industrial, or commercial. It is extended when profitable and contracted when depressed. It is not conducted to suit manufactures, but manufactures conform to it, changing methods and machinery to follow the wool product.

ACKNOWLEDGMENTS.

In the preparation of this report I wish to acknowledge special courtesies freely extended by Messrs. Coates Bros. and Justice & Bateman & Co., of Philadelphia; Messrs. Mauger & Avery and Macnaughton Company, of New York City; Mr. S. N. D. North, Mr. Curtis Guild, jr., and Messrs. George William Bond & Co., of Boston, and the officials of the Department of Agriculture. I have freely drawn upon the official publications by the statistical bureaus of foreign governments, and especially the statistical abstracts compiled in Great Britain and France. Drawn from so many sources, it is not possible in many cases to obtain returns apparently for the same year and covering the same subject that shall be exactly alike. The confusion is greater in that the number of sheep and the wool clip is everywhere a matter of estimate, and hardly two estimates will agree, although they may have been prepared by the same methods. As to the great wool market of the world I have given the summaries of Messrs. Helmuth Schwartze & Co. in full since

1887. The matter of domestic prices I think is sufficiently covered by the publication of the quotations made by Messrs. Coates Bros., of Philadelphia, believed to be "the oldest wool circular issued in this country," the first annual having been issued in 1851. Through the courtesy of Mr. Joseph P. Truitt, of Philadelphia, I am enabled to give his valuable and scientific estimates of the wool clips for a number of years. It is a pleasure to find the skilled knowledge and experience of private individuals so well applied to a special phase of an intricate subject of statistical inquiry.

WORTHINGTON C. FORD,
Chief of Bureau.

APPENDIX.

SHEEP, WOOL CLIP, AND WOOLEN MANUFACTURES OF THE UNITED STATES.

NUMBER OF SHEEP ON FARMS AND CROP OF WOOL IN EACH STATE [From the Official Reports of

a During the years 1884 to 1890, and in 1891, to include October 5, 1890, inclusive, the classification, according to value of classes 1 and 2, was 30 cents or less, and over 30 cents, per pound, respectively; in 1891, from October 6, 1890, there is, for classes 1 and 2, no subdivision of classes of wool according to value, but for class 3 the classification was 13 cents or less, and over 13 cents, per pound, respectively.

NOTES.—Washed and scoured wools not included in the above table.

The rates of duty on imports of raw wool during the above period were as follows:

On wools of classes 1 and 2, if valued at 32 cents or less per pound 10 cents por pound and 11 per cent to include 1883, and 10 cents per pound after 1883; if valued over 32 cents per pound, 12 cents per pound and ten per cent to include 1883, and 12 cents per pound after 1883.

On wools of class 3, if valued at 12 cents or less per pound, 3 cents per pound to include 1883, and 2½ cents per pound after 1883; if valued over 12 cents per pound, 6 cents per pound to include 1883, and 5 cents per pound after 1883.

The only exception from the above rates was in 1867 on combing wools, being on wools valued at 32 cents or less per pound, 10 cents per pound and 10 per cent; and on wools valued over 32 cents per pound, 12 cents and 22 per cent.

A reduction of 10 per cent was provided for from the regular rates of duty in all classes of wool from August 1, 1872, to March 3, 1875.

	valued 12 cents or less per pound	2½ cents per pound.
	over 12 cents	5 cents per pound.
	scoured	treble duty.
1890	Class I:	
	376. Class one, that is to say, Merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three	11 cents per pound.
	Washed	double duty.
	Scoured	treble duty.

a See note on page 90.

RAW WOOLS—Continued.

Act of—	Description.	Duty.
1890.....	Class II:	
	377. Class two, that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel, goat, alpaca, and other like animals.	12 cents per pound.
	Scoured.....	treble duty.
	Class III:	
	378. Class three, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for, value 13 cents or less per pound.....	32 per cent.
	Over 13 cents.....	50 per cent.
	382. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.	
	383. The duty upon wool of the sheep or hair of the camel, goat, alpaca, and other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

SYNOPSIS OF DECISIONS OF THE TREASURY DEPARTMENT UNDER THE TARIFF LAWS OF 1883 AND 1890.

WOOL AND WOOLENS.

TARIFF ACT OF MARCH 3, 1883.

SCHEDULE K.—WOOL AND WOOLENS.

352. All wools, hair of the alpaca, goat, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

353. CLASS ONE, CLOTHING WOOLS.—That is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote, down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

354. CLASS TWO, COMBING WOOLS.—That is to say, Leicester, Cotswold, Lincolnshire, down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also all hair of the alpaca, goat, and other like animals.

355. CLASS THREE, CARPET WOOLS AND OTHER SIMILAR WOOLS.—Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

356*a*. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

356*b*. The duty upon wool of the sheep or hair of the alpaca, goat, and other like animals which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject.

357*a*. Wools of the first class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty cents or less per pound, ten cents per pound.

357*b*. Wools of the same class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty cents per pound, twelve cents per pound.

358*a*. Wools of the second class and all hair of the alpaca, goat, and other like animals, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be thirty cents or less per pound, ten cents per pound.

358*b*. Wools of the same class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed thirty cents per pound, twelve cents per pound.

359*a*. Wools of the third class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be twelve cents or less per pound, two and a half cents per pound.

359*b*. Wools of the same class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed twelve cents per pound, five cents per pound.

360. Wools on the skin, the same rates as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

361. Woolen rags, shoddy, mungo, waste, and flocks, ten cents per pound.

362. Woolen cloths, woolen shawls, and all manufactures of wool of every description made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding eighty cents per pound, thirty-five cents per pound and thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

363*a*. Flannels, blankets, hats of wool, knit goods, and all goods made on knitting-frames, balmorals, woolen and worsted yarns, and all manufactures of every description composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals, (except such as are composed in part of wool), not specially enumerated or provided for in this act.

363*b*. Valued at not exceeding thirty cents per pound, ten cents per pound.

363*c*. Valued at above thirty cents per pound and not exceeding forty cents per pound, twelve cents per pound.

363*d*. Valued at above forty cents per pound and not exceeding sixty cents per pound, eighteen cents per pound.

363*e*. Valued at above sixty cents per pound and not exceeding eighty cents per pound, twenty-four cents per pound.

363*f*. And in addition thereto, upon all the above-named articles, thirty-five per centum ad valorem.

363*g*. Valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

364. Bunting, ten cents per square yard, and in addition thereto thirty-five per centum ad valorem.

365*a*. Women's and children's dress goods, coat linings, Italian cloths, and goods of like description composed in part of wool, worsted, the hair of the alpaca, goat, or other animals.

365*b*. Valued at not exceeding twenty cents per square yard, five cents per square yard, and in addition thereto thirty-five per centum ad valorem.

365*c*. Valued at above twenty cents per square yard, seven cents per square yard and forty per centum ad valorem.

365*d*. If composed wholly of wool, worsted, the hair of the alpaca, goat, or other animals, or of a mixture of them, nine cents per square yard and forty per centum ad valorem.

365*e*. But all such goods with selvedges, made wholly or in part of other materials, or with threads of other materials introduced for the purpose of changing the classification, shall be dutiable at nine cents per square yard and forty per centum ad valorem:

365*f*. *Provided*, That all such goods weighing over four ounces per square yard shall pay a duty of thirty-five cents per pound and forty per centum ad valorem.

366. Clothing, ready-made, and wearing apparel of every description not specifically enumerated or provided for in this act, and balmoral skirts, and skirting, and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, except knit goods, forty cents per pound, and in addition thereto, thirty-five per centum ad valorem.

367. Cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and childrens' apparel and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other

animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer (except knit goods), forty-five cents per pound, and in addition thereto forty per centum ad valorem.

368. Webbings, gorings, suspenders, braces, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, head nets, buttons, or barrel buttons, or buttons of other forms for tassels or ornaments, wrought by hand, or braided by machinery, made of wool, worsted, the hair of the alpaca, goat, or other animals, or of which wool, worsted, the hair of the alpaca, goat, or other animals is a component material, thirty cents per pound, and in addition thereto, fifty per centum ad valorem.

369. Aubusson, Axminster, and chenille carpets, and carpets woven whole for rooms, forty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

370. Saxony, Wilton, and Tournay velvet carpets, forty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

371. Brussels carpets, thirty cents per square yard, and in addition thereto, thirty per centum ad valorem.

372. Patent velvet and tapestry velvet carpets, printed on the warp or otherwise, twenty-five cents per square yard, and in addition thereto, thirty per centum ad valorem.

373. Tapestry Brussels carpets, printed on the warp or otherwise, twenty cents per square yard, and in addition thereto, thirty per centum ad valorem.

374. Treble ingrain, three-ply, and worsted-chain Venetian carpets, twelve cents per square yard, and in addition thereto, thirty per centum ad valorem.

375. Yarn Venetian, and two-ply ingrain carpets, eight cents per square yard, and in addition thereto, thirty per centum ad valorem.

376. Druggets and bockings, printed, colored, or otherwise, fifteen cents per square yard, and in addition thereto, thirty per centum ad valorem.

377. Hemp or jute carpeting, six cents per square yard.

378a. Carpets and carpetings of wool, flax, or cotton, or parts of either or other material, not otherwise herein specified, forty per centum ad valorem.

378b. And mats, rugs, screens, covers, hassocks, bedsides, and other portions of carpets or carpetings, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

378c. And the duty on all other mats not exclusively of vegetable material, screens, hassocks, and rugs, shall be forty per centum ad valorem.

379. Endless belts or felts for paper or printing machines, twenty cents per pound and thirty per centum ad valorem.

ACT OF OCTOBER 1, 1890.

SCHEDULE K.—WOOL AND MANUFACTURES OF WOOL.

375. All wools, hair of the *camel*, goat, alpaca, and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes:

376. Class one, that is to say, Merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes two and three.

377. Class two, that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually

known by the terms herein used, and also hair of the camel, goat, alpaca, and other like animals.

378. Class three, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camels hair, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for.

379. The standard samples of all wools which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

380. Whenever wools of class three shall have been improved by the admixture of Merino or English blood from their present character as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class one or as class two, as the case may be.

381. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

382. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.

383. The duty upon wool of the sheep or hair of the camel, goat, alpaca, and other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt, or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the orginal fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

384. The duty upon all wools and hair of the first class shall be eleven cents per pound, and upon all wools or hair of the second class twelve cents per pound.

385. On wools of the third class and on camel's hair of the third class the value whereof shall be thirteen cents or less per pound, including charges, the duty shall be thirty-two per centum ad valorem.

386. On wools of the third class, and on camel's hair of the third class, the value whereof shall exceed thirteen cents per pound, including charges, the duty shall be fifty per centum ad valorem.

387. Wools on the skin shall pay the same rate as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

388. On noils, shoddy, top waste, slubbing waste, roving waste, ring waste, yarn waste, garnetted waste, and all other wastes composed wholly or in part of wool, the duty shall be thirty cents per pound.

389. On woolen rags, mungo, and flocks, the duty shall be ten cents per pound.

390. Wools and hair of the camel, goat, alpaca, or other like animals, in the form of roping, roving, or tops, and all wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this act, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this act.

391. On woolen and worsted yarns made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, valued at not more than thirty cents per pound, the duty per pound shall be two and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto, thirty-five per centum ad valorem; valued at more than thirty cents and not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem; valued at more than forty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem.

392. On woolen or worsted cloths, shawls, knit fabrics, and all fabrics made on knitting machines or frames, and all manufactures of every description made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, not specially provided for in this act, valued at not more than thirty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem; valued at more than thirty and not more than forty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem; valued at above forty cents per pound, the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

393. On blankets, hats of wool, and flannels for underwear composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animals, valued at not more than thirty cents per pound, the duty per pound shall be the same as the duty imposed by this act on one pound and one-half of unwashed wool of the first class, and in addition thereto thirty per centum ad valorem; valued at more than thirty and not more than forty cents per pound, the duty per pound shall be twice the duty imposed by this act on a pound of unwashed wool of the first class; valued at more than forty cents and not more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this act on a pound of unwashed wool of the first class; and in addition thereto upon all the above-named articles thirty-five per centum ad valorem. On blankets and hats of wool composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animal, valued at more than fifty cents per pound, the duty per pound shall be three and a half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem. Flannels composed wholly or in part of wool, the hair of the camel, goat, alpaca, or other animals, valued at above fifty cents per pound shall be classified and pay the same duty as women's and children's dress goods, coat lining, Italian cloths, and goods of similar character and description provided by this act.

394 On women's and children's dress goods, coat linings, Italian cloths, and goods of similar character or description of which the warp consists wholly of cotton or

other vegetable material, with the remainder of the fabric composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals valued at not exceeding fifteen cents per square yard, seven cents per square yard, and in addition thereto forty per centum ad valorem; valued at above fifteen cents per square yard, eight cents per square yard, and in addition thereto fifty per centum ad valorem: *Provided*, That on all such goods weighing over four ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

395. On women's and children's dress goods, coat linings, Italian cloth, bunting, and goods of similar description or character composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other amimals, and not specially provided for in this act, the duty shall be twelve cents per square yard, and in addition thereto fifty per centum ad valorem: *Provided*, That on all such goods weighing over four ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto fifty per centum ad valorem.

396. On clothing, ready made, and articles of wearing apparel of every description, made up or manufactured wholly or in part, not specially provided for in this act, felts not woven, and not specially provided for in this act, plushes and other pile fabrics, all of the foregoing, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals the duty per pound shall be four and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

397. On cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies and children's apparel and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, made up or manufactured wholly or in part, the duty per pound shall be four and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

398. On webbings, gorings, suspenders, braces, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, laces and embroideries, head nets, buttons, or barrel buttons, or buttons of other forms, for tassels or ornaments, wrought by hand or braided by machinery any of the foregoing which are elastic or non-elastic, made of wool, worsted, the hair of the camel, goat, alpaca, or other animals, or of which wool, worsted, the hair of the camel, goat, alpaca, or other animals is a component material, the duty shall be sixty cents per pound, and in addition thereto sixty per centum ad valorem.

399. Aubusson, Axminster, Moquette, and Chenille carpets, figured or plain, carpets woven whole for rooms, and all carpets or carpeting of like character or description, and oriental, Berlin, and other similar rugs, sixty cents per square yard, and in addition thereto forty per centum ad valorem.

400. Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard, and in addition thereto forty per centum ad valorem.

401. Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, forty-four cents per square yard, and in addition thereto forty per centum ad valorem.

402. Velvet and tapestry velvet carpets, figured or plain, printed on the wrap or otherwise, and all carpets or carpeting of like character or description, forty cents per square yard, and in addition thereto forty per centum ad valorem.

403. Tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise, twenty-eight cents per square yard, and in addition thereto forty per centum ad valorem.

404. Treble ingrain, three-ply and all chain Venetian carpets, nineteen cents per square yard, and in addition thereto forty per centum ad valorem.

405. Wool Dutch and two-ply ingrain carpets, fourteen cents per square yard, and in addition thereto forty per centum ad valorem.

406. Druggets and bockings, printed, colored, or otherwise, twenty-two cents per square yard, and in addition thereto forty per centum ad valorem. Felt carpeting, figured or plain, eleven cents per square yard, and in addition thereto forty per centum ad valorem.

407. Carpets and carpeting of wool, flax or cotton, or composed in part of either, not specially provided for in this act, fifty per centum ad valorem.

408. Mats, rugs, screens, covers, hassocks, bed sides, art squares, and other portions of carpets or carpeting made wholly or in part of wool, and not specially provided for in this act, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

DECISIONS IN REGARD TO WOOL AND WOOLENS.

TREASURY DEPARTMENT, *August 31, 1883.*

SKINS WITH THE WOOL ON.—It appears from your monthly report of importations for July, that in the case of certain sheepskins imported with the wool on, duties were assessed on the wool at the rate of 2½ cents per pound, and on the skins at the rate of 10 per cent ad valorem.

The tariff formerly in force imposed duty on such skins at the rate of 30 per cent ad valorem, but the provision was not reproduced in the new tariff. The existing free list includes (T. I., new, 719) "hides, raw or uncured, whether dry, salted, or pickled, and skins, except sheepkins with the wool on, angora-goat skins, raw, without the wool, unmanufactured, asses' skins, raw or unmanufactured," and also (T. I., new, 788,) "skins, dried, salted, or pickled."

In view of this legislation, and of the provision of section 2499, that "non-enumerated articles similar in material, quality, texture, and the use to which they may be applied to articles on the free list, and in the manufacture of which no dutiable materials are used, shall be free," the Department holds that the skins mentioned in your report were entitled to admission free of duties, and if the requirements of section 2931, Revised Statutes, have been complied with, measures may be taken in the usual manner for a refund of the amount levied in excess.

Of course the duties on the wool will be retained. **(5883.)**

TREASURY DEPARTMENT, *September 17, 1883.*

WORSTED SHAWLS—The Department duly received your letter of the 21st ultimo, submitting the appeal (7852 *h*) of Jno. V. Farwell & Co. from your assessment of duty at the rate of 45 cents per pound and 40 per cent ad valorem on certain worsted shawls entered at your port July 27, 1883.

The goods are dutiable under Schedule K of the tariff of March 3, 1883, which provides for woollen and worsted goods. Woollen shawls are enumerated therein, but worsted shawls are not, and the question presented is, whether worsted shawls shall be classified under paragraph 366 (T. I., new), which provides for "clothing ready-made, and wearing-apparel of every description, not specially enumerated or provided for in this act, * * * composed wholly or in part of wool or worsted," or under paragraph 367, which provides for "cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel, and goods of similar description or used for like purposes, composed wholly or in part of wool, worsted," etc.

Shawls are unquestionably wearing-apparel, but it is not so clear that they come within a proper definition of the word "garment," which Webster defines to mean any article of clothing, as a coat, a gown, etc. The term clothing, as commonly understood, would not embrace articles like shawls.

The articles enumerated in paragraph 367 are made up by the seamstress or manufacturer from cloth or other fabric, which of itself is a finished article, while shawls are made by a continuous process from the yarn by machinery. Shawls do not belong to the class of goods enumerated in paragraph 367, and, in the opinion of the Department, it is not applicable by the usual rule of law adopted in construing tariff statutes (*noscitur a sociis*) to worsted shawls, and hence they remain dutiable, under paragraph 366, as wearing-apparel.

Upon the view thus taken, the provision in section 2499, that "if two or more rates of duty should be applicable to any imported article, it shall be classified for duty under the highest of such rates," does not reach this case. You will adjust the entry accordingly. **(5903.)**

TREASURY DEPARTMENT, *September 22, 1883.*

YARN MADE OF WOOL AND RABBIT'S HAIR.—The Department is in receipt of your letter of the 15th instant, transmitting the appeal (9618*h*) of George Müller from your decision assessing duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain yarn imported, per *Westphalia*, August 2, 1883, which the appellant claims to be dutiable at the rate of 30 per cent ad valorem, as "rabbit's fur yarn," under the provision in Schedule N of the Tariff of 1883 (T. I., new, 435) for articles made of fur, &c.

The merchandise consists of yarn made from wool and rabbit's hair, in the proportion of 65 per cent of wool to 35 per cent of hair, and the appraiser reports that its proper classification is under the provision for woollen and worsted yarns found in Schedule K (T. I., new, 363). In this opinion the Department concurs, and as the yarn was valued at over 80 cents a pound, the correct rate of duty was that assessed by you. Your assessment of duty at the rate specified is hereby affirmed. **(5913.)**

TREASURY DEPARTMENT, *October 20, 1883.*

MERINO FICHUS.—The Department is in receipt of your letter of the 23d of August last, transmitting the appeal (7926*h*) of Carson, Pirie, Scott & Co. from your decision assessing duty at the rate of 50 per cent ad valorem on certan merino fichus imported July 18, 1883, which the appellants claim to be duitable at the rate of 40 cents per pound and 35 per cent ad valorem.

The articles are ready-made clothing or wearing-apparel, composed in part of silk and in part of wool, and the question involved is whether they are dutiable as manufactures of silk or of which silk is the component of chief value (T. I., new, 383), or under the provision for "clothing, ready-made, and wearing-apparel of every description, not specially enumerated or provided for in this act, * * * composed wholly or in part of wool," &c. (T. I., new, 366.)

In the opinion of the Department, the articles are provided for in the clause last mentioned, as they are therein enumerated as ready-made clothing, in part of wool, and as such provision takes precedence of the general provision (T. I., new, 383) for "all goods, wares, and merchandise not specially enumerated or provided for in this act, made of silk, or of which silk is the component material of chief value."

The Department decides that the appeal is well taken, and that the appellants are entitled to a reliquidation of the entry. You will take action accordingly. **(5964.)**

TREASURY DEPARTMENT, *November 12, 1883.*

WHITE HIGHLAND WOOL.—I have the honor to acknowledge the receipt of a letter from the Acting Secretary, dated the 6th instant, transmitting a copy of a dispatch from Mr. Bret Harte, United States consul at Glasgow, relating to the price of white Highland wool.

In reply to your request for the views of this Department, on the inquiry of the consul, as to the definition to be given to the phrase "at the last port or place whence exported to the United States," I have to state that it is generally the place where the goods are put on shipboard for exportation to the United States. Thus, in the case of an importation of "Highland laid wool," shipped from Glasgow to Liverpool for shipment to the United States, this Department held, February 5, 1878, that Liverpool was the last place of shipment within the meaning of the tariff, and in another case, of certain wool from Dewsbury, England, shipped to the United States from Liverpool, it was decided, July 30, 1879, as follows:

"In the present case, Liverpool was the last port whence the wool was exported to the United States; consequently it is the duty of the appraiser to determine its actual market value there, and that fixes the value by which the rate of duty shall be determined." "The charges from Dewsbury to Liverpool do not enter into the question unless the appraiser should find that the market value at Liverpool is less than the invoice price at Dewsbury, with the freight from Dewsbury to Liverpool added."

It will be seen, therefore, that, as regards the Highland wool, referred to by the consul as being gathered up at places in the interior, brought to Glasgow and put on board the exporting vessel at the latter place for shipment to the United States, it should be valued for the purpose of ascertaining the rate of duty at Glasgow, and not at the interior ports; and, further, that the transportation charges to Glasgow are not to be added *as such* to ascertain the value, for the reason that the law requires the ascertainment of the value at the last port or place whence exported to the United States, excluding charges in such port.

If the market value at Glasgow for the wool is greater than the market value at the interior places, the merchandise should be invoiced accordingly, but without any express addition for transportation charges to Glasgow. When the actual market value of such wool, at the last place of shipment to the United States, exclusive of charges in such port, shall have been ascertained, no further inquiry is necessary to ascertain the value for the purpose of determining the rate of duty to which the merchandise is liable. **(6008.)** *a.*

TREASURY DEPARTMENT, *November 19, 1883.*

WOOL NOILS.—The Department duly received your letter of the 4th instant, requesting that imported wool noils from the long wool of the Cotswold and Leicester sheep may be classified for duty as wools of the third class, or carpet wools, upon the ground that they are only fit for use as carpet stock.

The theory upon which the wool tariff of 1867 was adopted was a division of the wools into various classes according to race and blood, and their classification was not to be determined according to their use. This distinction has been maintained from the time of the enactment of the law until the present. The Department has heretofore decided that wool noils should be classified as wool, and, consequently, noils from wool of the Cotswold and Leicester sheep belong to class two, as combing wools, without regard to the uses to which they are put. Whether the principle adopted in the Department's decision of June 2, 1883, to which you refer, which determines the classification of mohair noils according to the uses for which they are fit, is a correct one or not, the Department does not propose to extend that principle to wool. **(6028.)**

---

a See No. 6129.

TREASURY DEPARTMENT, *December 7, 1883.*

TAPESTRY CARPETS.—The Department is in receipt of your letter of the 9th of October, submitting the appeal (176 *i*) of J. Kennard & Sons from your assessment of duties at the rate of 45 cents per square yard and 30 per cent ad valorem on certain tapestry velvet and tapestry Brussels carpets imported by them. The carpets were woven whole, some of the pieces being 10 feet square, and others of less dimensions.

The importers claim that they are dutiable at 40 per cent ad valorem, under the following provision in Schedule K (T. I., new, 378):

Carpets and carpeting of wool, flax, or cotton, or parts of either or other material, not otherwise herein specified, forty per centum ad valorem; and mats, rugs, screens, covers, hassocks, bedsides, and other portions of carpets or carpetings, shall be subjected to the rate of duty herein imposed on carpets or carpetings of like character or description; and the duty on all other mats not exclusively of vegetable material, screens, hassocks, and rugs, shall be forty per centum ad valorem.

The ground upon which they base this claim is that the carpets are "of insufficient size to cover an ordinary room, and are not portions of carpets and carpetings."

You assessed the duty under Schedule K, paragraph 369, which imposes a duty of 45 cents per square yard and 30 per cent ad valorem on "Aubusson, Axminster, and chenille carpets, and carpets woven whole for rooms." Conceding the claim made by the appellants, that the carpets are of insufficient size to cover a room of ordinary size, they are not dutiable under paragraph 378, because tapestry Brussels and tapestry velvet carpets are specially provided for in paragraphs 372 and 373. The claim of the appellants is therefore rejected. **(6060.)**

TREASURY DEPARTMENT, *December 11, 1883.*

WOOLEN KNIT GOODS.—The Department is in receipt of your letter of the 24th of October last, transmitting the appeals (543 *i* and 544 *i*) of the John Shillito Co., from your decision assessing duty at the rate of 45 cents per pound and 40 per cent ad valorem on certain ladies' jackets and cloaks imported into your port on the 22d and 24th of September last (entries Nos. 1332 and 1343), which the appellants claim to be dutiable according to value per pound weight, under the provision in Schedule K (T. I., new, 363) for "knit goods."

Upon an inspection of samples, it appears that the articles are made of a knitted fabric of wool, and that they come within the general category of "knit goods," which are specially excepted from the provision (T. I., new, 366 and 367) for "clothing, ready-made," etc., and "cloaks, dolmans," etc.

The samples were also submitted to the appraiser at New York, who reports that it is the practice at that port to classify such articles as "knit goods," at a duty of 35 cents per pound and 40 per cent ad valorem, when they cost over 80 cents per pound.

The Department, therefore, decides that the appeals are well taken, and authorizes you to reliquidate the entries accordingly. **(6065.)**

TREASURY DEPARTMENT, *December 26, 1883.*

WOOLS—LAST PORT OF EXPORTATION TO UNITED STATES.—The Department is in receipt of your letter of the 10th instant, in which you review the opinion expressed in its letter to the Secretary of State of November 12, 1883 (Synopsis, 6008), as to the proper definition to be given to the term used in the tariff imposing duties on wools "at the last port or place whence exported to the United States," where the value is to be determined by which the rate of duty is governed.

The question you discuss is, whether the place where the wool is placed on board the exporting vessel, and from which she sails to the United States, is necessarily

the place where the dutiable value is to be determined, or whether the law does not, in using the term "port or place," admit of the value being taken at the interior place of purchase or production, and where its journey to the United States might in some cases be said to commence. You favor the latter view.

I reply that the act of March 2, 1867, which is the foundation of the present system of tariff on wools, declares that, to determine the rate of duty on the various classes of wools, the value shall be taken at the *last* port or place whence exported to the United States, excluding charges in such port. This phrase is six times repeated in section 1 of said act.

The alternative form of expression, "*last* port or place," was used so as to distinguish the last port or place of shipment from any prior port or place from which it might be shipped. The words port or place were used because shipments might be made in some instances from places which were not ports—for example, from countries adjacent to the United States.

The same form of expression was used in Schedule L of the Revised Statutes, which reproduced the wool act of 1867, and is also maintained unimpaired in Schedule K of the tariff of March 3, 1883.

It was all the while the value at the *last* port or place whence exported to the United States, excluding charges in such port, that was to control.

The phrase "excluding charges in such port," as used in the tariff of March 3, 1883, is surplusage, because the duty on all charges as such, above the value of the goods, was repealed by the same act.

With other merchandise, however, the rule by which the rate of duty dependent on value was determined was different.

The seventh section of the act of March 3, 1865, prescribed that in all cases where the rate of duty was regulated by or directed to be estimated on the value of the square yard, or of any specified quantity or parcel of such merchandise, the value should be determined according to the actual market value or wholesale price at the period of exportation to the United States, in the *principal markets* of the country from which the same should have been imported. To this was added, by section 9 of the act of July 28, 1866, the cost of packing and transportation to the exporting vessel, including other charges therein mentioned. This line of distinction has been uniformly maintained by the Department.

Now, the question of packing and shipping charges no longer enters into the case. The duty on such charges has been removed, and the duty on wool is wholly specific.

The sole question for the appraiser to determine is, what is the market value of the wool *per se* at the *last* port or place whence exported to the United States.

Wools produced in the highlands of Scotland and transported to Glasgow, and exported thence to the United States, must be valued at Glasgow, because that is the last place of exportation. **(6084.)**

TREASURY DEPARTMENT, *January 23, 1884.*

WOOL NOILS—CLASSIFICATION OF.—Referring to your letter of the 17th ultimo, inclosing one from Mr. George William Bond, in regard to the classification of wool noils, and their place in the standard cabinets of wool which he is now preparing, under directions from this Department, I have to state that by decision No. 1404, of February 8, 1873, it was provided that noils which are nothing but wool, automatically sorted, were to be classed as washed wools, and not as scoured wools. This was owing to the fact that in the process of arranging them for the combers they had necessarily to be oiled to a certain extent, which unfitted them to be classed as scoured wool. The extracts which Mr. Bond furnishes from his report on the classification of noils in 1873 advised that noils of the first and second classes should be rated as scoured wools. This view was not sustained by the decision referred to. I agree with him

that the long practice under this decision must be assumed to have been known to the Tariff Commission and the lawmakers when enacting the new tariff, and that it should be followed as a rule of action. As to noils from wools of the third class, it makes no difference whether they are classed as washed or unwashed. The reasons of the rule in regard to noils from first and second-class wools, not being classed as scoured wools, apply equally to noils from wools of the third class. **(6133.)**

TREASURY DEPARTMENT, *January 23, 1884.*

MIXED GOODS—SILK AND WOOL CLOTH.—The Department duly received your letter of the 29th of October last, submitting the appeal (672*i*) of Messrs. Meyer & Dickinson from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain matelassé cloth imported in the vessels therein named.

It appears that the goods are composed of silk and wool, and that silk is the chief component of value thereof.

There are two paragraphs in the tariff which embrace these goods, viz, paragraph 362, in Schedule H, for "all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for," and that in paragraph 383, in Schedule L, for "all goods * * * not specially enumerated or provided for, * * * made of silk, or of which silk is a component material of chief value." Section 2499 of the Revised Statutes, as amended by the act of March 3, 1883, provides that "on all articles manufactured from two or more materials the duty shall be assessed at the highest rates at which the component material of chief value * * * may be chargeable."

This principle would make the article under consideration dutiable, under Schedule L, at 50 per cent ad valorem, as a manufacture of which silk is the component material of chief value. Where this provision is applicable the further provision that "if two or more rates of duty should be applicable to any imported article it shall be classified for duty under the highest of such rates," can not be applied, because two or more rates of duty are not applicable to the article.

You will therefore readjust the entry at the rate of 50 per cent ad valorem. **(6134.)**

TREASURY DEPARTMENT, *January 24, 1884.*

MERINO TROWSERS, SHIRTS, HOSE, ETC.—The Department is in receipt of your letters of the 14th instant, transmitting the appeals (2565*i* and 2566*i*) of Lindaner Bros. & Co. from your decision assessing duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain merino trowsers, shirts, hose, etc., imported into your port on the 30th of August last, which the appellants claim to be dutiable at the rate of 40 per cent ad valorem, under the provision in Schedule I (T. I., new, 323) for "stockings, etc., composed wholly of cotton," etc.

The appraiser reports that all of the goods in question consist of "knit goods," of which wool forms an important feature, costing over 80 cents per pound.

Referring to Schedule K (T. I., new, 362), the Department affirms your decision. **(6135.)**

TREASURY DEPARTMENT, *January 24, 1884.*

LASTINGS.—Under date of May 25, 1883, a petition was forwarded to this Department, signed by Messrs. H. B. Claflin & Co. and a large number of other parties connected with manufacturing interests in the United States, in regard to the classification of fabrics known as lastings, which are generally used in the manufacture of shoes. It was contended by these parties that lastings were dutiable under par-

agraph 365 of Schedule K, which provides for "women's and children's dress-goods, coat-linings, Italian cloths, and goods of like description, composed in part of wool, worsted, the hair of the alpaca, goat, or other animals."

If not dutiable under this provision, they fall into paragraph 363. The question is then narrowed down to whether lastings are goods of like description to Italian cloths. It is shown by the papers that lastings are made of heavy two fold worsted warps and coarse cotton weft, while Italian cloths are made of fine cotton warps and fine single worsted wefts, Italians being much lighter fabrics than lastings. Their uses are not similar, Italian cloths being used mainly for coat-linings, while lastings are for shoe purposes, and their quality is not similar.

To determine whether the goods are of like description to those enumerated in the tariff, reference must be had to some standard. In Butterfield against Merritt, the test whether certain goods were of "like description" was chiefly the uses to which they were applied. It was also held that the term "goods of like description" and that "or for similar use" were to be construed as practically convertible. In Stewart *v.* Maxwell, 16 Howard, 160, cited with approbation in Arthur, collector, *v.* Fox, Supreme Court, October term, 1882, the court applied the same test to the similitude clause, section 2499, Revised Statutes.

Upon these views the Secretary has directed the classification of lastings under paragraph 363 of Schedule K, which makes the duty dependent upon the value of the goods per pound.

Action will be taken accordingly. **(6137.)**

TREASURY DEPARTMENT, *February 13, 1884.*

TOILET MATS OF SILK, COTTON, AND WORSTED.—The Department is in receipt of your letter of the 1st instant, submitting the appeal (3242*i*) of Messrs. Mandel Brothers from your assessment of duty at the rate of 50 per cent ad valorem on certain embroidered mats imported by them (entry No. 6178), November 21, 1883.

The appellants claim that the mats in question are entitled to entry at the rate of 40 per cent ad valorem, as "cotton embroideries," under the Department's decision of February 10, 1883 (not published).

The appraiser reports that the mats are toilet or table mats or squares, made of silk-faced velvet or plush, with a lining or back of cotton, and a narrow worsted fringe, of trifling value, around the edge, and embroidered to a small extent on the surface, and that, in his opinion, silk is the component of chief value.

From this description of the mats, the Department is of opinion that they are not entitled to entry as "cotton embroideries," and that they were properly classified as manufactures of which silk is the component of chief value. Your decision is hereby affirmed.

The decision to which the appellants refer is not applicable to goods imported under the act of March 3, 1883. **(6169.)**

TREASURY DEPARTMENT, *March 15, 1884.*

MOURNING-BANDS FOR HATS.—The Department is in receipt of your letter of the 15th of November last, transmitting the appeal (1099*i*) of H. Tilge & Co. from your decision assessing duty at the rate of 50 cents per pound and 35 per cent ad valorem on certain woollen bands imported, per *Lord Gough*, May 29, 1883, which the appellants claim to be dutiable at the rate of 30 per cent ad valorem, as "trimmings for hats" (T. I., old, 380).

An inspection of samples shows that the articles are woollen bands, which are intended for use as badges of mourning on men's hats.

Mourning-bands of this character are not commercially known as "trimmings" for hats, and neither are they materials which are used in the manufacture of hats. They are articles which are bought and sold separately from completed parts, and which do not constitute a portion of the materials necessary for the manufacture of hats.

In the opinion of the Department, the claim of the appellants can not be allowed. Your decision is affirmed. **(6243.)**

TREASURY DEPARTMENT, *April 15, 1884.*

TWEED HATS.—The Department is in receipt of your letter of the 22d ultimo, transmitting the appeal (5380*i*) of D. P. Ilsley & Co., from your decision assessing duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain tweed hats imported per *Samaria*, October 19, 1883, which the appellants claim to be dutiable at the rate of 30 per cent ad valorem.

These hats, as the appraiser states, are not the "hats of wool" or felt hats (see Department's ruling of September 1, 1860) which are specified in Schedule K (T. I., new, 363), but consist of hats made of a tweed cloth. Hats of this character and hats of all kinds, except those commercially known as "hats of wool," are dutiable at the rate of 30 per cent ad valorem, under the special provision in Schedule N (T. I., new, 400) for "hats * * * for men, women, and children," etc., and Department's ruling of February 27, 1884 (Synopsis, 6197).

You will reliquidate the entry accordingly. **(6299.)**

TREASURY DEPARTMENT, *April 22, 1884.*

COTTON EMBROIDERED WITH WORSTED.—The Department duly received your letter of the 26th ultimo, submitting the appeal (5533*i*) of T. Schulemann from your decision assessing duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain so-called "cotton embroideries" imported, per *Bohemia*, December 20, 1883.

The goods consisted of cotton embroidered with worsted, intended for the manufacture of shoes, cushions, foot rests, and other like articles.

The appellants claim the proper rate of duty to be 40 per cent ad valorem, under paragraph 325, which includes cotton embroideries.

In the tariff found in the Revised Statutes, the provision for embroideries was "manufactures of cotton, linen, or silk, if embroidered or tamboured in the loom, or otherwise, by machinery or with the needle or other process, not otherwise provided for, 35 per cent ad valorem."

This provided for manufactures of cotton embroidered, whether the embroidery was done with cotton or other materials.

In the act of March 3, 1883, the provision is for cotton embroideries.

The goods in question are not commercially known as cotton embroideries, and are not wholly of cotton, neither is the embroidery composed of cotton.

It is held that they are not within the provision for embroideries, but are dutiable under paragraph 363, as manufactures in part of worsted.

Your decision is hereby affirmed. **(6309.)**

TREASURY DEPARTMENT, *April 24, 1884.*

WORSTED LACES FOR DRESS TRIMMINGS.—This Department is in receipt of your letter, dated the 18th instant, transmitting the appeal (6216*i*) of Messrs. Meyerheim, Martin & Co., from your assessment of duty at the rate of 30 cents per pound and

50 per cent ad valorem on certain so-called worsted laces imported by them, per *Amerique*, August 13, 1883.

Duties were assessed under paragraph 368 (T. I., new), relating to "dress trimmings * * * made of * * * worsted."

The Department understands that the goods resemble worsted yak lace, and are used for similar purposes.

In the case of Duden *v.* Arthur (Synopsis 4360), tried in the circuit court for the southern district of New York, the testimony showed that yak laces were not considered by importers and dealers generally in this country as covered by the term "dress trimmings." The verdict to that effect was acquiesced in by the Department, and the principle should govern in the present case.

The laces in question are included in the provision of paragraph 362 (T. I., new), for "all manufactures of every description composed wholly or in part of worsted," and as they are understood "to be valued at above 80 cents per pound," the claim of the appellants, that they are dutiable at 35 cents per pound and 40 per cent ad valorem, is correct.

You will, therefore, take measures for a refund of the duties levied in excess. **(6311.)**

TREASURY DEPARTMENT, *May 6, 1884.*

WORSTED AND COTTON COAT LININGS.—The Department duly received your letter of the 26th of March, transmitting the appeals (5434 *i*, 5435 *i*, 5436 *i*, 5437 *i*, and 5438 *i*) of H. Herrman Sternbach & Co. from your assessment of duty on certain coat liningsimported by them per the vessels therein named.

The goods were made of worsted and cotton, and were classified under paragraph 365 of Schedule K, at a duty of 35 cents per pound and 40 per cent ad valorem, the concluding proviso of said schedule being held to control the rate of duty on the goods. The appellants claim, however, that the proviso relates only to goods manufactured *wholly* of wool, worsted, the hair of the alpaca, goat, or other animals, and hence does not affect the classification of those goods.

The first part of the paragraph relates to women's and children's dress goods, coat linings, Italian cloths, and goods of like description, composed in part of wool, worsted, the hair of the alpaca, goat, or other animals.

After fixing duties on this description of *mixed* goods, the paragraph takes up similar goods composed *wholly* of wool, worsted, etc., or of a mixture of them, and declares that all *such* goods with selvages made wholly or in part of other materials, or with threads of other materials introduced for the purpose of changing the classification, shall be dutiable at 9 cents per square yard and 40 per cent ad valorem.

In that connection the words "such goods" evidently refer to goods which are assumed to be wholly manufactured of wool, worsted, etc., and not to those named in the first part of the paragraph, which are confessedly made in part of wool, worsted, etc. The paragraph concludes with a proviso that all *such* goods weighing over 4 ounces to the square yard shall pay a duty of 35 cents per pound and 40 per cent ad valorem.

It is the opinion of the Department that the words "such goods" in this connection are confined to the class of goods assumed to be made wholly of wool, worsted, etc., or of a mixture of them, and paying duty as such, whether with selvage or without, or whether with or without threads or other materials introduced for the purpose of changing the classification; although, therefore, the goods in this case weigh over four ounces to the square yard, they are dutiable only at the rate provided in the first part of the paragraph, according to value per square yard. The entry will be readjusted accordingly. * * * **(6331.)***a*

---

a Modified by No. 6429.

TREASURY DEPARTMENT, *June 28, 1884.*

COTTON AND WOOL GLOVES.—The Department is in receipt of your letter of the 17th instant, transmitting the appeal (8701 *i*) of Parker, McDonald & Bliss from your decision assessing duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain cotton and wool gloves imported May 20, 1884, which the appellants claim to be dutiable at the rate of 35 per cent ad valorem, as manufactures of cotton.

The appraiser reports that the gloves in question are composed of a cotton exterior and wool lining, the wool portion being quite an important feature.

Articles of this character, manufactured in part of wool, and where the wool portion is a substantial feature, are covered by the provision in Schedule K (T. I., new, 366) for "wearing-apparel, of every description * * * composed wholly *or in part* of wool," * * * and are dutiable at the rate of 40 cents per pound and 35 per cent ad valorem.

The claim of the appellants is rejected. (**6428.***a*)

TREASURY DEPARTMENT, *June 28, 1884.*

WOMEN'S AND CHILDREN'S DRESS-GOODS.—In Decision No. 6331, of May 6, 1884, the question was discussed whether the concluding proviso of paragraph 365 of the Treasury edition of the tariff of March 3, 1883, which requires dress-goods weighing over four ounces to the square yard to pay a duty of 35 cents per pound and 40 per cent ad valorem, applies only to the goods made wholly of wool, worsted, etc., or of a mixture of them, or to all the dress-goods and other fabrics named in said paragraph 365.

The conclusion arrived at was that the proviso qualified only the goods made wholly of wool, worsted, etc.

As important interests were, however, involved, the Department decided to refer the question to the Attorney-General, and the following is his reply to the request of this Department for his opinion on the subject.

In reply to yours of the 18th instant, I submit the opinion that the expression "all such goods," in the *proviso* to a paragraph beginning 'women's and children's dress-goods' (act of 1883, ch. 121, Schedule K, 22 Stats., page 509, 3d paragraph from top), means what the same expression had meant immediately before—that is, 'all goods' described *throughout that paragraph*, and 'weighing over four ounces,' etc.

The Department yields to this opinion, and Decision No. 6331 is modified accordingly. (**6429.***b*)

TREASURY DEPARTMENT, *August 6, 1884.*

GLOVES AND HOSIERY—KNITTED WOOLEN.—This Department is in receipt of the letter of your special deputy, dated the 31st ultimo, stating that it has been the practice at your port to assess duty at the rates of 35 cents per pound and 40 per cent ad valorem on woolen gloves and hosiery made on knitting-frames, and inquiring whether the Department's decision of June 28, 1884, (synopsis 6428), fixing the rate on such gloves at 40 cents per pound and 35 per cent ad valorem, was intended to apply to all hosiery as well as gloves.

The inquiry is answered in the negative.

The "knit goods and all goods made on knitting-frames," mentioned in Schedule K (T. I., new, 363), will be classified as heretofore. The decision in question related only to articles of the character therein mentioned, viz: To such as "are composed of a cotton exterior and wool lining, the wool portion being quite an important feature."

---

a See No. 6513. *b* Revoked by No. 6924.

As bearing upon the question, please refer to the Department's decision of September 11, 1879 (synopsis 4194). **(6513.*a*)**

TREASURY DEPARTMENT, *August 20, 1884.*

BYZANTINE CARPETS.—The Department is in receipt of your letter of the 15th instant transmitting the appeal (105 *k*) of the John Shillito Company from your decision assessing duty at the rate of 30 cents per square yard and 30 per cent ad valorem on certain so-called byzantine carpets imported into your port on the 21st ultimo which the appellants claim to be dutiable at the rate of 40 per cent ad valorem (T. I., new, 378).

It appears from the special report of the appraiser that the carpets in question are woolen carpets, which are woven in precisely the same manner and of the same materials as Brussels carpets, with the exception that here and there, at irregular intervals, a metal thread is introduced, which, however, is not of sufficient importance or character to take them out of the category of Brussels carpets.

Brussels carpets are specially provided for at a duty of 30 cents per square yard and 30 per cent ad valorem (T. I., new, 371), and in the opinion of the Department the said carpets were properly classified as such.

The claim of the appellant is rejected. **(6538.)**

TREASURY DEPARTMENT, *November 20, 1884.*

WOOLEN YARNS.—The Department is in receipt of your letter of the 7th instant transmitting appeals (1941 *k* and 1942 *k*) of Messrs. H. Taylor & Co. from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem, under T. I., new, 362, on certain woolen yarns imported by them, per *Illinois*, *British Princess*, and *British Prince*, March 21 and 25, and April 21, 1884, and returned by the appraiser as manufactures of wool not otherwise provided for.

The importers claim that the goods should be classified as "woolen or worsted yarns," under T. I., new, 363, and subjected to the rate of duty specified therein, according to their value per pound.

It appears from the appraiser's report in this case that the merchandise in question "consists of different-colored yarns, cut in lengths for the purpose of knitting into mats," and was not considered by him as "woolen yarn of commerce."

The distinction does not seem to be well established, as the woolen yarn of commerce is of different colors, and is cut in lengths or hanks, and intended for knitting or other manufacturing purposes. An inspection of the samples verifies this view. The mere cutting of the yarn to such lengths as the samples show does not operate to change its character. It remains "woolen yarn," and as such is specially provided for in T. I., new, 363.

This case is closely analogous to appeal 7219 *h* from your office (synopsis, 6109), in which spun-silk warps are held by the Department to be dutiable as spun silk, and, in accordance with the principles enunciated in that case, the appeals in this case are sustained.

The entries will be readjusted under the provisions of T. I., new, 363, and the necessary steps taken to refund the excess of duty exacted. **(6649.)**

---

a The Department is of opinion that the gloves lined with flannel should be classified for duty under the provision in Schedule L for "wearing apparel of every description, * * * and composed wholly or in part of wool, * * * made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer," at the rate of 50 cents per pound and 40 per cent ad valorem."

The cotton gloves lined with leather are not leather gloves within the terms of the law above quoted, but are entitled to entry at the rate of 35 per cent ad valorem, under the provision in Schedule M, for "articles worn by men, women, or children, of whatever material composed, except silk and linen, made up or made wholly or in part by hand, not otherwise provided for." (4194—September 11, 1879.)

TREASURY DEPARTMENT, *November 21, 1884.*

CLOAKS PARTLY COMPOSED OF WOOL.—The Department is in receipt of your letter of the 12th instant, transmitting the appeal (2011 *k*) of Benjamin & Caspary from your decision assessing duty at the rate of 45 cents per pound and 40 per cent ad valorem on certain so-called silk and worsted cloaks imported, per *Elbe*, August 27, 1883, which the appellants claim to be dutiable at the rate of 50 per cent ad valorem.

It is understood from the report of the appraiser that the cloaks are made of matelassé cloth, which is a fabric composed of silk, wool, or worsted and cotton, and that they were returned by him as "wool cloaks."

"Cloaks * * * composed wholly or in part of wool, worsted," etc., are specially provided for (T. I., new, 367) at the rate of duty assessed by you, and, in the opinion of the Department, this provision governs without regard to the quantity of wool or worsted which may be contained in the fabric from which the cloaks are manufactured, provided, of course, it is an appreciable quantity.

Your decision is therefore affirmed.

The appraiser's attention should be directed to the fact that there is no special provision in the existing tariff for "silk wearing-apparel." **(6653.)**

TREASURY DEPARTMENT, *January 3, 1885.*

MOHAIR NOILS.—The Department duly received your letter of the 15th ultimo, submitting the appeal (3152 *k*) of Messrs. Chadwick & Chadwick from your assessment of duty at the rate of 10 cents per pound on certain mohair noils imported by them from Liverpool, per steamer *Virginia*, November 3, 1884.

The appellants claim that the merchandise should be classed as third-class wool or carpet stock, presumably under decision 5743, of June 2, 1883, while the appraiser returned it as second-class wool, dutiable under Schedule K, at the rate assessed. *a*

The decision referred to mohair noils, consisting of short hairs combed from the long hairs of the Angora goat, said not to have been fit for combing purposes, and to be scarcely suitable for anything but carpet stock, and it was held that, "considering the uses to which the article covered by this appeal is available, and to which it is undoubtedly intended to be put, its proper place in the tariff is with

a From the report of the appraiser it appears that the merchandise in question consisted of short hairs, combed from the long hairs of the Angora goat.

It is not fit for combing purposes, and is said to be scarcely suitable for anything but "carpet stock." The appellant claims that the proper rate of duty is 3 cents per pound, under that clause in Schedule L which imposes that rate of duty on carpet wool and other similar wools, when of the value of 12 cents per pound or less. Schedule L places all hair of the alpaca, goat, or other like animals with combing wools, upon which duties accrue at the rate assessed by you. The opinion of those most conversant with the ideas upon which the tariff found in Schedule L rests, and its practical operation since the passage of the wool tariff in 1867, is, that the paragraph specifying class 2 was intended to apply only to such hair of the alpaca, goat, or other like animals as is fit for combing purposes.

That that provision was not intended to cover all hair of the goat, etc., is shown by decision No. 4108, of July 23, 1879, which holds that certain hair cut from the beard of the ordinary white goat, and intended for the manufacture of brushes, was not dutiable under Schedule L.

The characteristics of some descriptions of goats' hair are so nearly like those of wool that customs officers have, at times, found it difficult to decide whether it was goats' hair or came from the sheep; and in such cases it has been generally classed with the class of wool which it most nearly resembles, especially as regards its uses.

Considering the uses to which the article covered by this appeal is available, and to which it is undoubtedly intended to be put, its proper place in the tariff is with carpet wools, and not being otherwise provided for in Schedule L, it should pay the duty therein imposed on carpet wools.

It can not be classed under the provision in Schedule M, which imposes a duty of 10 per cent ad valorem on hair of all kinds, cleaned, but unmanufactured, not otherwise provided for, because Schedule L in its first clause expressly provided that "all wools, hair of the alpaca, goat, and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes," and this must be held to include all such products as are fit for combing or weaving. (5743—June 2, 1883.)

carpet-wools, and, not being otherwise provided for in Schedule L, it should pay the duty therein imposed on carpet wools."

This ruling was made on the evidence presented as to the uses for which the article was fit, notwithstanding the fact that class 2, Schedule K, comprises all hair of the alpaca, goat, and other like animals, which was held, however, by said decision to embrace the hair of such animals only when fit for combing purposes.

As to the merchandise covered by the present appeal, the appraiser reports as follows: "The article in question is used by the importers in the manufacture of plush, imitations of seal-skins, astracan, and other similar goods, for ladies' cloakings and trimmings. It is not the mohair noils, short, and fit only for carpets, subject of Department's decision 5743. As shown by the above, it is fit for combing purposes, and, being produced from mohair, is, in my opinion, dutiable under T. I., 354, which provides for all hair of the alpaca, goat, and other like animals."

Your assessment of duty as stated is hereby affirmed.

It is deemed proper to add that the report of the commission which examined the wool samples prepared by Mr. Geo. Wm. Bond recommended that all mohair noils should be placed with class 2, and the samples were arranged in the cabinets accordingly.

Upon due consideration, however, I decide not to disturb decision 5743, which places mohair noils under class 3 when fit only for use as carpet stock. When such noils are fit for other purposes, they will be placed under class 2.

The assignment of the samples in the cabinets will be understood accordingly. **(6707.)**

TREASURY DEPARTMENT, *January 13, 1885.*

WOOLLEN BONNETS.—The Department is in receipt of the appeals hereinafter mentioned from your decision assessing duty at the per pound and ad valorem rates according to value per pound weight on certain so-called Scotch bonnets, which the appellants claim to be dutiable at the rate of 30 per cent ad valorem, under the provision in Schedule N (T. I., new, 400) for "bonnets, hats, and hoods for men, women, and children, and composed of * * * other material not specially enumerated or provided for in this act."

It appears that the goods consist of woollen caps, which are partly woven and partly knitted, of the same character as those which by Department's rulings of July 25 and October 31 last (not published) were held to be neither the "bonnets," "hats," nor "hoods" which are covered by the paragraph before cited.

The goods were dutiable under Schedule K, and the claim of the appellants is therefore rejected. **(6718.)**

TREASURY DEPARTMENT, *February 14, 1885.*

SHAWLS.—The Department is in receipt of your letter of the 25th of November last, submitting the appeal (2196*k*) of James P. Farrell from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem, on certain shawls imported, per *Britannic*, February 4, 1884.

A portion of the shawls in question were worsted shawls, which were dutiable, under decision 5903, of September 17, 1883, and paragraph 366 of Schedule K, at 40 cents per pound and 35 per cent ad valorem. The entry will be readjusted at that rate. The remainder of the goods are silk and worsted shawls, having silk as a component of chief value. If they be considered worsted shawls, they are dutiable under paragraph 366, but if they be considered as manufactures of silk, or of which silk is a component of chief value, they would be dutiable at 50 per cent ad valorem, under paragraph 383 of Schedule L.

Section 2499 of the Revised Statutes, as found in the act of March 3, 1883, declares that if two or more rates of duty shall be applicable to any imported article, it shall be classified for duty under the highest of such rates. That provision controls in

this case, and as the duty of 50 per cent ad valorem is understood to be higher than that imposed by the wool tariff, it follows that the articles are dutiable at 50 per cent ad valorem. The entry will be readjusted accordingly. **(6766.)**

TREASURY DEPARTMENT, *February 19, 1885.*

WOOLEN TURBANS.—The Department is in receipt of your letter of the 14th instant, submitting the appeal (7883*k*) of Mr. Daniel D. Youmans from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain turbans imported by him, per *America*, September 27, 1884, and claimed to be entitled to entry at the rate of 30 per cent ad valorem under the provision in the act of March 3, 1883 (T. I., new, 400), for "hats for men, women, and children, composed of chip, grass, * * * or other material."

The appraiser reports that the articles are worsted caps of a peculiar shape, known as turbans, and that they were classified under the provision in said act (T. I, new, 363) for "hats of wool."

The Department is of opinion that such classification is correct, and your decision is hereby affirmed. **(6770.)**

TREASURY DEPARTMENT, *April 24, 1885.*

ARTICLES ASSIGNABLE TO EITHER OF TWO CLASSES DUTIABLE UNDER THAT IMPOSING THE HIGHEST RATE OF DUTY.—The Department is in receipt of your letter of the 3d instant, submitting the appeal (9324*k*) of Messrs H. Herrman, Sternbach & Co. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain merchandise imported by them, per *Arizona*, July 21, 1884.

The appraiser reports that the goods in question are composed of goat's hair, cotton, and silk, silk being the component material of chief value, and that under the Department's decision of January 23, 1884 (Synopsis, 6134), they are entitled to entry at the rate of 50 per cent ad valorem, as claimed by the appellants.

Paragraph 365, Schedule K, imposes duties at the rate of 35 cents per pound and 40 per cent ad valorem on all manufactures composed in part of the hair of the alpaca, goat, or other animals, when weighing over 4 ounces per square yard. These goods fulfill those conditions. They are also goods of which silk is the component of chief value, and so meet the requirements of Schedule L.

The appellants claim that the goods are dutiable, under Schedule L, at 50 per cent ad valorem, which rate is therefore understood to be less than that assessed by you under Schedule K. Under the principle laid down in decision 6766, these goods are dutiable under the schedule yielding the highest rate of duty, as prescribed by section 2499, which was the rate assessed by you.

Your decision is affirmed.

Your assessment of duty on the appraised value of Italian cloths and cotton velvets contained in said importation, which included the cost of making up tillots, cartons, etc., which were necessary to place them in the condition in which they are usually held for sale in the foreign markets, being in accordance with the Department's decisions of February 20, 1884 (Synopsis, 6185), and August 6, 1884 (Synopsis, 6514), is also affirmed. **(6875.)**

TREASURY DEPARTMENT, *April 18, 1885.*

CLOAKS OF WOOL AND FUR—The Department is in receipt of your letter of the 1st instant, transmitting the appeal (9285*k*) of Mr. M. Stern from your assessment of duty at the rate of 45 cents per pound and 40 per cent ad valorem on certain so-called "fur cloaks" imported, per *Germanic*, November 16, 1883, returned by the appraiser at your port as "wool cloaks" (T. I., new, 367), and claimed by the appellant to be dutiable as "manufactures of fur," at 30 per cent ad valorem (T. I., new, 435).

The appraiser reports that the goods in question are worsted cloaks, lined with fur, and that fur is, without doubt, the component material of chief value.

The appellant claims that the value of the wool in these articles is only about one-tenth of the value of the entire cloak.

Under Department's decision of November 21, 1884 (Synopsis, 6653), paragraph 367, T. I., new, which provides for "cloaks * * * composed wholly or in part of wool," etc., governs in such cases *without regard to the quantity of wool contained*, provided it is an appreciable quantity.

The question of the comparative value of the wool and other component materials is equally immaterial.

The entire outside of the garments is wool. It is certainly an appreciable quantity.

They are, therefore, dutiable under the paragraph cited, and your assessment thereunder, in accordance with the above decision, is hereby affirmed. **(6862.)**

TREASURY DEPARTMENT, *April 29, 1885.*

"WOOL WASTE" CLASSIFIED AS SCOURED WOOL.—The Department is in receipt of your letter of the 17th instant, transmitting the appeal (9693*k*) of the Hockanum Company, by George Maxwell, treasurer, from your assessment of duty at the rate of 30 per cent ad valorem on certain so-called wool waste imported, per *Roman*, January 28, 1885, and returned by the appraiser as scoured wool, dutiable under T. I., new, 356 and 357, and Department's decision of July 13, 1883 (Synopsis, 5820). (*a*)

It appears from the appraiser's report that the merchandise in question is composed of about 50 per cent of broken tops, laps, and slubbings, the balance being fine rovings, with a very small percentage of spinner's waste in it; that the noil has all been combed out, leaving this the "cream" of the wool, and that the best part of it can be recombed to a "top" without 2 per cent waste; also, that it has been thoroughly scoured.

---

a The article appears to be produced in the following manner, viz: In drawing the wool for spinning, on passing the last drawing machine the wool is wound on a spool or ball and thence onto the spindles. That portion remaining on the spool or ball which will not unwind is torn off, and is called "slubbings," and is the article covered by this appeal.

It came from wool which had been scoured, and duty was assessed upon it at the rate imposed by law on scoured wools of class 1, valued at less than 32 cents per pound when uncleaned, under Schedule L of the tariff of 1874. (T. I., old, 233 and 234.)

The appellants claim that the article is wool waste, dutiable under the following clause in Schedule L: "Woolen rags, shoddy, mungo, waste, and flocks, 12 cents a pound." (T. I., old, 241.)

The first inquiry is what description or condition of wool is meant by the "woolen waste" used in the tariff. One of the definitions given by Worcester to the term waste is "something of little or no account or value, as the refuse of cotton or silk."

There is an article known in the trade as wool waste which is the product of the first combing, noils being the product of the last combing. It is worth from 12 to 15 cents a pound less than the wool from which it comes. The waste from wool resulting from the various processes of manufacture is known by the various names of card waste, spinning waste, thread waste, etc. This description of waste is sometimes sold as it comes from the mill, and sometimes after it has undergone the so-called "opening" process, and it appears to have been imported for the past twenty-five years.

The article covered by this appeal is much more valuable than that before described, and can be used as wool, either with other wool or by itself, requiring only to be put through the preparers, etc. It is more valuable than noils from the same wool, which, by Decision 1404, are subject to duty as wool.

Upon these facts, the Department is of opinion that the article under consideration is not "woolen waste" within the meaning of the tariff law, and hence the claim of the appellants is rejected and your decision affirmed.

For your guidance in other like cases, the Department has to state that, following the principle laid down in the decision above cited, this article must pay the same duty as the wool from which it came. The only other question is whether it shall be classed as washed or scoured wool. The sample submitted appears to have been partially scoured, but not at all thoroughly. Upon boiling a sample it was found that the grease was about 8 per cent of the material. The Department is inclined to the opinion that its true classification is as washed wool of the first class, dutiable at 20 cents a pound and 22 per cent ad valorem. A definite decision, however, will only be made on that point when a case shall be presented in which the rate of duty shall be claimed in the protest. (5820—July 13, 1883.)

It is understood that in importations of wool waste there are always small quantities of laps and rovings mixed in, which manufacturers do not take the trouble to remove; but from an inspection of the samples submitted, of the present and other importations by the appellants, it is apparent that in this instance the percentage of tops, laps, and rovings is largely in excess of that found in the other cases, and that it composes the greater portion of the importation in question.

The presence of a small percentage of spinners' waste can not be allowed to change the rate of duty otherwise applicable to merchandise of this character, which, under the decision cited (synopsis 5820), must pay the same duty as the wool from which it came.

The appraiser reports that unwashed Australian wool of the quality of this stock would cost in England 14 pence, or about 28 cents per pound. This, under paragraph 357, T. I., new, would be dutiable at 10 cents per pound; but having been scoured, as already stated, it becomes liable, under T. I., new, 356, to three times that rate, or 30 cents per pound, and your assessment of duty in accordance therewith is hereby affirmed. **(6884.)**

TREASURY DEPARTMENT, *May 19, 1885.*

WORSTED DRESS GOODS.—In the case of Ellison *et al. v.* Hartranft, recently decided in the U. S. circuit court for the eastern district of Pennsylvania, which involved the question of duties upon dress goods made in part of worsted and weighing over 4 ounces to the square yard, a verdict was rendered in favor of the plaintiffs.

The question involved in the case was whether the proviso in paragraph 365, act of March 3, 1883, which specifies that "all such goods weighing over 4 ounces per square yard shall pay a duty of 35 cents per pound and 40 per cent ad valorem," "relates to the women's and children's dress goods, coat linings, Italian cloths, and goods of like description, composed *in part* of wool, worsted, the hair of the alpaca, goat, or other animals," mentioned in the beginning of said paragraph.

This question was decided in the negative and judgment rendered for the plaintiffs.

The Attorney-General having certified that no writ of error will be sued out the Department acquiesces in the finding of the court.

You are therefore authorized to take the necessary steps for the settlement of the judgment in the suit, and for the discontinuance of all other similar suits now pending at your port covering goods of this character, where the provisions of section 2931, Revised Statutes, have been fully complied with, by reclassifying the goods and forwarding certified statements for a refund of the excessive duties, with legal interest and costs.

This decision will be accepted as a rule of action in such cases, and revokes the ruling of June 28, 1884. (Synopsis, 6429.) **(6924.)**

TREASURY DEPARTMENT, *May 21, 1885.*

WOOLEN GOODS—REAPPRAISEMENT BASIS FOR DUTIES.—The Department is in receipt of your letter of the 18th instant, reporting on the appeal (9896 *k*) of Fred. Victor & Achelis from your decision assessing duty on the reappraised value of certain woolen goods imported, per *Rhynland*, March 14, 1885.

It appears that duty was assessed on the value, which was found by you on reappraisement under article 470 of the Regulations, the merchant and general appraiser having made separate reports of value, and that the appellants now claim that the reappraisement should be reopened because the merchant appraiser has, since filing his return, requested the recall of the invoice for reconsideration.

You state that the request of the merchant appraiser was not received by you until long after you had acted on the case and had rendered your decision under the

requirements of the said article 470 of the Regulations; that the proceedings on the appraisement and reappraisement were regular and in due form, and that in determining the question of dutiable value as between the general appraiser and the merchant appraiser you concurred with the views of the latter.

In this case the reappraisement was rendered complete by the filing of your decision, and in the opinion of the Department the same can not be reopened except upon it being made to appear that irregularities occurred in the proceedings or that clerical errors are manifest in the returns. After completion of a reappraisement it can not be reopened at the mere request of the merchant who acted as appraiser, for his functions as such appraiser ceased upon the rendering and acceptance of his report of value.

No irregularities or clerical errors having occurred, the Department decides that the reappraisement in this case is final and conclusive, under the provisions of section 2930, Revised Statutes.

The claim of the appellants is therefore rejected. **(6930.)**

TREASURY DEPARTMENT, *June 1, 1885.*

PAINTINGS ON WORSTED.—The Department is in receipt of your letter of the 18th ultimo, transmitting the appeal (555 *l*) of Messrs. Ferdinand Bing & Co. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain so-called "paintings on worsted" imported, per *Normandie,* October 7, 1884, and returned by the appraiser at your port as manufactures of wool and worsted, valued at over 80 cents a pound, and dutiable under T. I., new, 362.

The appellants claim that the articles are dutiable at the rate of 30 per cent ad valorem, as paintings, under T. I., new, 470.

The appraiser reports that the merchandise consists of manufactures of wool and worsted in the form of panels or screens, with paintings thereon.

The Department is of the opinion that such articles are not paintings within the meaning of the paragraph, but are manufactures of wool and worsted, and do not lose their character as such by being painted upon for purposes of ornamentation.

Your assessment of duty is accordingly affirmed. **(6947.)**

TREASURY DEPARTMENT, *June 3, 1885.*

WOOLEN AND COTTON UMBRELLA CLOTHS.—The Department is in receipt of your letters of the 6th and 11th ultimo, submitting the appeals (9977 *k* and 71 *l*) of Matthew Binney's Sons from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain umbrella cloths, composed of worsted and cotton, imported by them, per *Cephalonia,* April 23, and *Pavonia,* March 4, 1885.

The appellants claim that the goods in question are Italian cloths, and entitled to entry at the rate of 7 cents per square yard and 40 per cent ad valorem.

Upon investigation it is found that the goods are composed of the same materials (worsted and cotton) as Italian cloths, but that they differ from such cloths in having stripes or borders woven at the sides, which render them fit exclusively for the manufacture of umbrellas.

The provision of law (T. I., new, 365) imposing duty on Italian cloths embraces also "goods of like description," but the Department concurs with the appraiser in the opinion that the merchandise in question, being commercially known as "umbrella cloth," does not come within the scope of that provision, the more especially so as it differs in an essential point from Italian cloths, viz, in having a border which is woven in the fabric, by reason of which it is unfit for the uses to which Italian cloths are put. **(6951.)**

TREASURY DEPARTMENT, *June 27, 1885.*

MOHAIR NOILS.—The Department's attention has been called to an importation into your port of 20 bales of mohair noils, per *British Crown*, June 9, 1885, which was made by George H. Patton & Co., and subjected to a duty of 2½ cents per pound as third-class wool.

It is represented that the mohair noils in question are similar to those which were the subject of decision 6707, and that they are composed of long staples, and are capable of being used in the manufacture of various fabrics other than carpets. An inspection of samples affirms the correctness of these representations.

The merchandise, however, is not third-class wool, but *hair* of *the goat*, which is specially provided for in Schedule K. (T. I., new, 358.)

Referring, therefore, to Department's instructions to you of this date, on the appeals (1531 *l* and 1532 *l*) of John and James Dobson, you are directed to reliquidate the entry of the said mohair noils, by classifying them under the provision of the tariff above mentioned, specially applicable thereto, and to take the necessary steps for collecting the duties still due the Government. **(6998.)**

TREASURY DEPARTMENT, *June 27, 1885.*

CASHMERE-GOAT HAIR.—The Department duly received your letter of the 6th instant, transmitting the appeals (1531 *l* and 1532 *l*) of Messrs. John and James Dobson from your assessment of duty at the rate of 10 cents per pound on two importations of so-called "gray China wool," per *British Prince* and *British Crown*, April 15 and 30, 1885.

The merchandise was returned by the appraiser as "China Cashmere-goat hair," and was classified under the provisions (T. I., new, 358) of Schedule K, act of March 3, 1883, for wools of the second class, of value under 30 cents per pound.

The appellants claim that the merchandise is wool of the third class, valued at over 12 cents per pound, entitled to entry at the rate of 5 cents per pound under the provisions (T. I., new, 359) of Schedule K, and they contend that, if the classification as "China Cashmere-goat hair" was technically correct, the proper rate of duty would be 5 cents per pound, for the reason that the article is not suitable for combing purposes, and can only be used as carpet wool, therefore should be admitted under the Department's decision (Synopsis, 5743) of June 2, 1883, wherein it was held that certain mohair noils, consisting of short hairs, combed from the long hairs of the Angora goat, were entitled to entry under the provisions for wool of class 3 as unfit for combing purposes, and intended and available only for use in making carpets.

From the appraiser's special report accompanying your letter it appears that the merchandise was sold at the London wool sales in January, 1885, as "Cashmere-goat hair," from which fact, and from the opinion of the best judges of wools at Philadelphia, to whom samples were submitted, there can be no doubt but that the merchandise is what is known to commerce as "Cashmere-goat hair," and is not the article known commercially as China wool. It has apparently been taken from the skins of slain kids, and is a short and very fine staple, but filled with coarse hairs, which detract largely from its value.

The appraiser at Boston, and the wool expert in his office, report that the merchandise "is unquestionably China Cashmere-goat hair, known commercially as such;" that Cashmere-goat hair can be and is combed in England and America; that it is not used by carpet manufacturers, but by manufacturers of ladies' dress-goods, etc., in which use the presence of the long, coarser hairs in the cloth adds to its value by showing from what materials it is made. It also appears that the sample of the merchandise submitted corresponds with sample (No. 53) of Cashmere-goat hair, class 2, in the cabinet of standard samples, prepared by Mr. George

William Bond, and accepted by the Department, and is markedly different from the samples of "China wool," class 3, in that cabinet of standard samples.

It is plain, from all the evidence before the Department, that the merchandise is Cashmere-goat hair, commercially known, and not China wool.

The appellants rely upon the Department's decision (Synopsis, 5743) of June 2, 1883, which accords with an unpublished letter of this Department, addressed to you under date of September 14, 1883, in which it was decided that certain 56 bales of "Cashmere-goat hair" entered by them as "East India carpet wool," class 3, which you classified as wool of class 2, was entitled to admission as wool of class 3, on the ground that the article was not fit for combing purposes, and was used as "a substitute for cattle hair to mix with wool or shoddy for the manufacture of the lowest class of carpets and woolen goods"—the view being adopted that it was the intention of Congress to include in class 2 only such hair of the alpaca, goat, and other like animals as is fit for combing purposes.

The doctrine laid down in these decisions seems to be clearly at variance with the law.

The tariff act of March 3, 1883 (par. 354, T. I., new), after describing certain wools to be included in class 2 as combing wools, adds "and also all hair of the alpaca, goat, and other like animals;" and paragraph 358 (T. I., new) provides that "wools of the second class, and all hair of the alpaca, goat, and other like animals," shall pay duty at 10 or 12 cents per pound, according to value.

This language is explicit and admits of no other interpretation than that *all* goat hair is dutiable at the same rates as wools of the second class. The quality of such hair, or the use for which it may be available or intended, is immaterial and can not affect its classification under the law. The Department, therefore, holds that the merchandise is properly dutiable at the rate assesed by you, under the said special provision (T. I., new, 358) for "all hair of the * * * goat, and other like animals," and affirms your decision in the premises.

Decision 5743 and any other rulings to the contrary will be considered as revoked. **(6999.)**

TREASURY DEPARTMENT, *July 22, 1885.*

WOOL—CLASSIFICATION OF.—The Department has received your letter of the 23d ultimo, with accompanying report from the appraiser at your port, in relation to the classification for duty of certain Scotch wool, known as "cheviot britch," to which your attention was called by Department's letter of April 27 last, transmitting sample of the article, with copy of a dispatch from the United States consul at Liverpool respecting the same, and reports on the subject from Mr. George William Bond and the appraiser at Boston.

The consul represents that the wool in question is of a kind included in Schedule K (T. I., new, 354) of the tariff act of March 3, 1883, as class 2, or combing wool, it being "other like combing wools of English blood," finer in quality than a large proportion of the "britch" from Leicester, Lincolnshire, Cotswold, etc., and of value in the markets of England and Scotland about the same (9*d.* to 10*d.* per pound) as Lincolnshire fleeces; nevertheless, that large quantities had been shipped from Scotland to Philadelphia fictitiously invoiced as "white carpet britch" or "carpet britch," and had been admitted to entry as class 3, or carpet wool (T. I., new, 355).

Mr. Bond pronounces the article "cheviot britch," and of good quality for that grade, consequently subject to duty as "second-class wool." It is from the Cheviot sheep of Scotland, kindred by race with Leicester, Lincolnshire, Cotswold, etc., and though not specially named in Schedule K of the tariff act of March 3, 1883, falls under the designation therein (T. I., new, 354) as "like combing wools of English blood," having been so classed and recognized since the passage of the tariff act of 1867, from which the present law was copied. He maintains, therefore, that it is

immaterial to the question whether "cheviot britch" is or can be used for carpets, as the classification of the tariff places it in the second class.

The appraiser at Boston reports that "cheviot wool" is used quite extensively in the manufacture of Scotch cloths of a coarse fabric, and, when mixed with merino wool, of cloths of a finer texture; also in the manufacture of ladies' dress goods, and, to a limited extent, the coarser portion for carpet purposes. It is not known commercially as carpet wool, neither is its general or characteristic use for carpet purposes. It is known commercially, bought and sold, as combing wool, and being of English blood, like Leicester, Cotswold, Lincolnshire, &c., in character, it is specially designated and provided for by race or blood, as "like combing wools of English blood."

Although you say you have no hesitation in expressing "entire concurrence with the interpretation placed upon the law governing this class of merchandise by Mr. Bond," it is found that the practice at your port in the classification of such merchandise has not been in accordance therewith.

It appears from the report of the appraiser at your port that it is clear to him that the wool produced from the Cheviot sheep belongs to the class known as "combing wools," and dealers in your city have expressed the opinion that the sample furnished by the consul at Liverpool was taken from Cheviot sheep, nevertheless he has heretofore returned such wool, imported at your port, as wool of class 3. In explanation of his action, he refers specially to an unpublished decision of this Department, dated September 4, 1883, in which it was held that certain Cashmere goat hair, imported by Messrs. John and James Dobson, represented as unfit for combing purposes, and intended as carpet stock, was entitled to admission as wool of class 3, and he says that, since the issuance of that decision, he has applied the principle therein laid down to the "britch" wool in question received at your port, which he states has been almost exclusively purchased by certain carpet manufacturers, and therefore used for no other purpose than making yarns for the manufacture of carpets.

From official reports on file in this Department it appears that as early as August, 1882, an importation of so-called "cheviot britch" wool, invoiced at 10*d.* per pound and described as "white carpet britch" or "carpet britch," was admitted to entry at your port as wool of class 3, and that since that date, up to recently, numerous large importations, of like description and value, have been admitted to entry by you at the same rate of duty, notwithstanding the appraiser's attention had been called to the fact that the wool was from Cheviot sheep, and samples of it have been so classed by experts at your port and at New York and Boston. Furthermore, it appears that during the time he was passing this "cheviot britch" the appraiser frequently had before him importations of regular fleece wool, of good quality, from the "black-faced" sheep of Scotland, the only wool grown in Great Britain authoritatively recognized as belonging to class 3, invoiced, as a rule, more than 50 per cent below such "britch" wool.

The so-called "britch" from Cheviot fleeces is known commercially in Scotland as "cheviot britch" (*white* or *laid*) and not as "white carpet britch" or "carpet britch;" hence it was improperly invoiced and entered under the latter descriptions, and it is assumed that the importers had knowledge of its true character and commercial designation when they imported it.

Assuming that all the so-called "white carpet britch" or "carpet britch" imported at your port was Cheviot wool, the Department can see no justification for its classification as wool of class 3. It appears to have been so returned by the appraiser for more than a year prior to the issuance of the decision of September 14, 1883, quoted by the appraiser, as well as since the publication of the Department's decision (Synopsis, 6028) of November 19, 1883, relating to noils from the wools of Cotswold and Leicester sheep, and which is plainly applicable to the merchandise in question.

The Department adheres to the doctrine laid down in this latter decision as to classification according to race or blood, not only of all wools, but also of "all hair of the alpaca, goat, and other like animals," without regard to quality, condition, or intended use of the article imported.

You are directed to cause your practice to conform to the views herein expressed, and to classify the said "cheviot britch" as class 2, combing wools, at the appropriate rate of duty according to value per pound. (**7034.**)

TREASURY DEPARTMENT, *July 23, 1885.*

MIXED GOODS—SILK AND WOOL.—Referring to your letter of the 21st instant, making inquiry as to the rate of duty applicable to certain dress goods composed of silk and wool, silk chief value, you are informed that the provisions of paragraph 383, T. I., new, for "all goods, wares, and merchandise, *not specially enumerated*, or provided for in this act, made of silk, or of which silk is the component material of chief value," are not applicable in cases where the merchandise in question falls within the list of specially designated articles embraced in the wool tariff (Schedule K). (**7037.**)

TREASURY DEPARTMENT, *August 6, 1885.*

CARPET WOOL.—The Department is in receipt of your letter of the 21st ultimo, transmitting the appeals (8678 *l* and 8679 *l*) of James Lees & Sons from your decision assessing duty at the rate of 5 cents per pound on certain carpet wool imported by them, per *British Princess*, August 31, 1884, and *Pennsylvania*, September 8, 1884, which the appellants claim to be dutiable at the rate of 2½ cents per pound.

It appears that the wool in question is third-class carpet wool, and that it costs under 12 cents per pound, without adding to the price thereof the cost of the bags in which it was contained. The cost of the bags, however, was added by you to its value, thereby making the apparent value of the wool 12 cents per pound, and hence you assessed duty at the rate of 5 cents per pound.

Upon due investigation of the matter, it is ascertained that wool of this character is classified at both New York and Boston at a duty of 2½ cents per pound, it not being the practice at those ports to add to its value the cost of the bags.

The practice thus prevailing at those ports, of excluding the cost of bags, is, in the opinion of the Department, correct and proper under the statute, and therefore it is held that, as the wool is valued at less than 12 cents per pound, the appeal is well taken.

You will reliquidate the entries accordingly, and take the necessary steps for refunding the excessive duties. (**7065.**)

TREASURY DEPARTMENT, *August 7, 1885.*

WOOL TAKEN FROM SHEEP IN BARBADOS.—The Department is in receipt of your letter of the 3d instant, transmitting the appeal (23 *m*) of A. D. Straus & Co. from your decision assessing duty on certain wool imported, per *Portia*, from Barbados on the 13th of April last.

The appellants claim that the wool is entitled to free entry, because it is the product of sheep and lambs of domestic origin which were exported alive to Barbados.

The appraiser reports that the wool is not the product of American sheep, but of sheep of Canadian or English blood.

It is immaterial, however, where the sheep originated, inasmuch as the question to be decided is one relating entirely to the wool.

The wool, whether taken from American or foreign sheep in Barbados, is, as such, of foreign production, and when imported is not entitled to free entry as claimed by the appellants or otherwise.

Your decision is affirmed. **(7067.)**

TREASURY DEPARTMENT, *August 24, 1885,*

CARDED GOAT'S HAIR. The Department is in receipt of your letter of the 3d instant, transmitting the appeal (9019 *l*) of Messrs. Dingelstedt & Co. from your assessment of duty at the rate of 20 cents per pound on certain so-called wool waste imported, per *Alaska*, February 10, 1885, and returned by the appraiser at your port as "carded goat's hair, class 2, valued under 30 cents in the unwashed condition, dutiable under T. I., new, 358," and that, having been selected and then manipulated in the carding machine, it becomes liable under T. I., new, 356, to twice the duty to which it would be otherwise subject.

The merchandise consists of China Cashmere goat's hair, from which the long hairs have been combed, and which has apparently been carded.

Reports from the appraisers at your port and at Boston, agree that the article is not wool waste, but the claim that it has been manipulated for the purpose of evading duty does not seem to be substantiated by the report from the latter officer, who states that similar merchandise has been imported at that port and is commercially known as Cashmere noils, and has been passed for duty at the rate of 10 or 12 cents per pound, according to cost.

The Department is of the opinion, therefore, that while the article is not wool waste, but is hair of the Cashmere goat, dutiable under T. I., new, 358, according to cost, yet the evidence of its having been imported in other than ordinary condition or of its having been manipulated for the purpose of evading duty, is not sufficient to warrant the imposition of double duty, under T. I., new, 356.

You are authorized to reliquidate the entry accordingly. **(7081.)**

TREASURY DEPARTMENT, *August 29, 1885.*

HAIR YARN.—The Department is in receipt of your letter of the 12th instant, submitting the appeal (670 *m*) of Schofield, Mason & Co., from your assessment of duty at the rate of 10 cents per pound and 35 per cent ad valorem on certain black cattle-hair yarn imported by them, per *Lord Gough*, July 16, 1885, and classified as "worsted yarn under 30 cents," or "manufactures of hair of 'other animals,'" under the provision therefor in the act of March 3, 1883 (T. I., new 363.)

The appraiser reports that the yarn is a manufacture of hair, whether of the goat or other animal he is unable to determine, but in either case dutiable at the rate assessed.

The appellants claim that it is manufactured wholly from cattle hair, and is entitled to entry at the rate of 30 per cent ad valorem, under the provision in the act above cited (T. I., new, 445), for "hair-cloth, known as 'crinoline-cloth,' and all other manufactures of hair not specially enumerated or provided for."

Under date of September 5, 1874 (synopsis, 1940), the Department decided that the provision of law then in force, which is reproduced in paragraph 445 of the act of March 3, 1883, related wholly to manufactures associated with the terms given in said paragraph, viz, crinoline cloth or manufactures of the same material.

The yarn in question, not being associated with, or similar to, crinoline cloth, the claim of the appellants is rejected. **(7093.)**

TREASURY DEPARTMENT, *August 29, 1885.*

WOOLEN GOODS—MOQUETTE.—The Department is in receipt of your letter of the 12th instant, submitting the appeal (667 *m*) of D. & J. C. Noblit & Co. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain moquette imported by them, per *British Princess*, June 24, 1885.

The appellants claim that the goods in question, which are manufactured of worsted and cotton, are made of the same materials, and by the same process as patent velvet carpets, and by assimilation are entited to entry at same rate of duty, on the ground that they are similar in quality, texture, and use as such carpets.

The article in question, although similar in appearance to velvet carpet, is not carpet, and is never used for the same purposes, but is used for covering seats in railroad cars, barber chairs, etc.

The Department decides that the goods are properly dutiable at the rate assessed, under the provision in the act of March 3, 1883 (T. I., new, 363), for "all manufactures of every description composed wholly or in part of worsted," and your assessment of duty thereon is hereby affirmed. (**7094.**)

TREASURY DEPARTMENT, *September 29, 1885.*

GOATSKINS WITH HAIR OR WOOL ON.—I transmit herewith a letter, dated the 17th instant, with two inclosures, from Mr. G. Amsinck, president, in which, in behalf of the importers of goatskins at your port and at Philadelphia, complaint is made of your action in assessing duty on the hair of common goatskins, imported for manufacture into morocco, it being alleged that the hair is unfit for commercial purposes, the same having to be removed from the skin by the use of lime, which renders it almost valueless.

From the statements contained in such communication, and also from those made to me personally by the committee there mentioned, it seems that it has been the practice heretofore to admit such skins free of duty, under the special provision in the free list (T. I., new, 709), for "goatskins, raw," and that it is only recently that they have been subjected to duty.

The question as to the classification of raw goatskins was the subject of Department's ruling of February 14, 1877 (synopsis, 3112), and it was thereby held that while *Angora* goatskins were liable to duty for the wool contained thereon, the skins of goats containing but a small "degree of Angora blood," and of the common Cape goats, were entitled to free entry, under such special provision in the law.

No good reason is perceived at this time for making any change in the practice which followed such decision, and if the skins now imported, and which are the subject of the inclosed communication, are of the character mentioned in such ruling, you are directed to continue such practice and to be governed by the decision. (**7147.**)

TREASURY DEPARTMENT, *October 27, 1885.*

WOOL AND RUBBER WATERPROOF CLOAKS.—The Department is in receipt of your letter of the 22d instant, transmitting the appeal (4996 *m*) of John Wanamaker from your decision assessing duty at the rate of 45 cents per pound and 40 per cent ad valorem on certain wool and rubber waterproof cloaks imported into your port, per *Lord Clive*, March 31, 1885, which the appellant claims to be dutiable at the rate of 30 per cent ad valorem, as manufactures of India rubber.

The cloaks in question being, as the appraiser reports, manufactured in part of wool, are dutiable at the rate assessed by you, under the special provision in Schedule K, T. I., new, 367, for "cloaks" "composed wholly or in part of wool."

Your decision is affirmed. (**7184.**)

TREASURY DEPARTMENT, *October 31, 1885.*

HAIR ON RAW GOATSKINS.—The Department is in receipt of your letter of the 19th inst, transmitting an appeal (4672 *m*) of Wight & Harper from your decision assessing duty at the rate of 10 cents per pound on certain so-called "hair on raw goatskins" imported by them, per *Persian Monarch*, on the 24th ultimo, which the appellants claim to be exempt from duty under the provision in the free list (T. I., new, 709) for "goatskins, raw."

It appears from the report of the appraiser that the skins in question from which the hair or wool in question was taken are Angora goatskins, which are only exempt from duty when imported without the wool (free list, T. I., new, 719), and that the hair or wool in question, which was taken therefrom is a fine quality of combing wool, and of the same if not a better class than the wool or hair of the Angora goat, which is usually imported, and which is combed by the largest combers in the United States for use, in connection with other wools, in the manufacture of ladies' dress goods.

An inspection of a sample of the importation in question, when compared with samples of the ordinary Angora goat wool of hair, satisfies the Department that it is a very fine article of combing wool, containing a large percentage of Angora blood.

The merchandise is dutiable, under Schedule K. T. I., new, 358, being valued at 30 cents or less per pound, at 10 cents per pound, and your decision is affirmed. **(7194.)**

TREASURY DEPARTMENT, *November 11, 1885.*

"ANGORA GOATSKINS."—Referring to Department's letter to you of the 4th instant and previous correspondence, in relation to Angora goatskins with the wool on, imported from the Cape of Good Hope, you are informed that the matter has been carefully investigated and considered, and that the Department has arrived at the following conclusions:

That these Angora skins, the product of the Cape of Good Hope, are not the real Angora goatskins of commerce, but skins of a bastard or cross-blood goat of partial Angora blood, and that while some of the skins show such blood in but a small degree, others are of superior quality and show strong traces thereof.

That the wool or hair on these last-mentioned skins, as has been lately ascertained upon an actual importation at Philadelphia, consists of a very fine quality of combing wool of the same, if not superior class to the wool or hair of the Angora goat as usually imported, which latter is combed by the largest combers in the United States, for use in connection with other wools in the manufacture of ladies' dress goods.

That the hair or wool on skins of this superior character is liable to duty, as has been heretofore held by the Department, as well as by its ruling of February 14, 1877 (Synopsis, 3112 *a*), as several times since, and that the Department is consequently unable under the law to grant your request for passing them free of duty under the provision for goat-skins, raw. To admit such Angora skins of superior quality free of duty would open the door to fraud on the revenue.

A sufficient examination of the bales can be made to determine the number of superior skins without destroying their identity, and without causing delay or embarrassment to the importer. **(7206*a*.)**

TREASURY DEPARTMENT, *November 13, 1885.*

INK BLOTTERS IN PART OF WOOL.—The Department is in receipt of your letter of the 10th instant, submitting the appeal (6255 *m*) of Mr. C. F. Rumpp from your

---

a See No. 7147.

assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain shell blotters imported by him, per *Rugia*, September 11, 1885.

The articles in question, it appears, are ink blotters, made of paper and woolen cloth, surmounted by a shell, which serves as a handle for the blotters, and the appellant claims that duty should be assessed thereon either at the rate of 15 per cent ad valorem, as "manufactures of paper," or 25 per cent ad valorem, as "manufactures of shell," or that the appropriate duty should be levied on the several parts.

The several parts of the blotters being securely glued together, the Department's decision of July 25, 1877 (synopsis 3319), which applies only to *machinery*, or similar articles composed of different materials, which are easily separable for purposes of classification, is not applicable.

The woolen cloth, it appears, forms a material and appreciable element in the formation of the blotters, so as to be taken into account in their classification, and the Department is of opinion that they were properly classified under the provisions of section 2499, act of March 3, 1883, and its decision of November 21, 1884 (synopsis, 6653), on cloaks composed in part of wool.

Your assessment of duty is therefore affirmed. (**7208.**)

TREASURY DEPARTMENT, *November 20, 1885.*

TWEED CAPS.—The Department is in receipt of your letter of the 22d ultimo, submitting the appeal (5014 *m*) of D. P. Ilsley & Co. from your assessment of duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain tweed caps imported by them, per *Missouri*, September 26, 1885.

The appellants claim that the caps in question are dutiable at the rate of 30 per cent ad valorem, under the provision in paragraph 400, act of March 3, 1883, for "hats * * * for men, women, and children."

From an examination of the samples submitted, it is found that the articles in question are caps made of tweed cloth, some being without visors, others having a single visor in front, and still others two visors, one in front and one behind.

Under date of November 26, 1883 (synopsis, 6044), the Department decided that caps are not hats within the meaning of the law, and as the articles in question are caps in fact, and known commercially by that name, the claim of the appellants is rejected.

The Department is of opinion that they were properly classified under the provision in paragraph 366 of said act for "wearing apparel of every description * * * composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animal," and your assessment of duty thereon is hereby affirmed. (**7214.**)

TREASURY DEPARTMENT, *November 21, 1885.*

WOOL TOPS.—The Department is in receipt of your letter of the 18th instant, transmitting the appeal (6914 *m*) of Messrs. Stoddard, Lovering & Co. from your decision assessing duty at the rate of 60 cents per pound on certain "wool tops" imported by them, per *Iberian*, on the 4th instant, which the appellants claim to be dutiable at the rate of 18 cents per pound and 35 per cent ad valorem, under the provision in Schedule K (T. I., new, 363) for manufactures of worsted, valued at above 4 cents and not exceeding 60 cents per pound.

These wool tops, as appears from the special report of the appraiser and an inspection of samples, are the combings or cardings of fine Australian (clothing) wool, and are produced by scouring the wool and then passing it, in the usual manner, through the combing or carding machine.

The claim of the appellants that wool tops are dutiable under the provision for manufactures of worsted was disposed of by Department's ruling of February 17,

1881 (synopsis, 4777), wherein it was held that wool tops were in no sense manufactures of wool or worsted, but come within the category of unmanufactured wools, subject to the duties prescribed therefor, according to condition, class, etc.

In this case the wool tops come from clothing wools, which, the appraiser states, are valued in the unwashed condition under 30 cents per pound, and, if imported in that condition, would have been dutiable at the rate of 10 cents per pound; but, having been scoured, they become dutiable, under the provision of said schedule (T. I., new, 356) at three times the rate prescribed for wool in the unwashed condition, making 30 cents per pound; and, furthermore, inasmuch as wool tops constitute a condition of wool other than the ordinary one in which wool is imported, this importation becomes liable to double the last rate, or twice the duty to which it would be otherwise subject.

The wool, therefore, being scoured, and also being imported in an extraordinary condition, is dutiable at the rate of 60 cents per pound, and your decision is hereby affirmed.

(7217).

TREASURY DEPARTMENT, *November 23, 1885.*

FELT SHOES.—Referring to your letter of the 26th ultimo, concerning the classification for duty of imported felt shoes, I have to state that upon due consideration the Department is of the opinion that the classification as "wearing apparel," at the rate of 40 cents per pound and 35 per cent ad valorem, under T. I., new, 366, as followed at the port of New York, should be adopted as the correct classification under the tariff acts.

The provisions of T. I., new, 367, for cloaks, etc., and other "outside garments," can hardly be considered applicable, as shoes do not assimilate to cloaks or any of the articles therein specifically mentioned, nor would they be considered as "outside garments" in the ordinary acceptation of the term.

This view does not conflict with that expressed in Department's decision of November 23, 1876 (synopsis, 3023), on woolen overboots, inasmuch as the articles covered by T. I., new, 366 and 367, were all included in one paragraph (247) under the old tariff.

You will be governed accordingly. (**7218.**)

TREASURY DEPARTMENT, *December 3, 1885.*

REPACKING OF WOOL IN WAREHOUSE.—The Department is in receipt of your letter of the 23d ultimo, relative to the application of Mr. D. A. Hollister for permission to repack in bonded warehouse certain 6,082 pounds of wool intended to be withdrawn for exportation in bond by way of San Francisco.

It appears that the wool is packed in nineteen bales, not pressed, but merely filled by hand, and that it is desired to repack it into a smaller number of pressed bales, for convenience in transportation, the original bales being unwieldy.

In the absence of any provision of law or regulations to authorize repacking of merchandise in bond, other than drugs and chemicals, except when repacking is necessary for preservation of the goods, the application must be denied. (*See* article 679 of the General Regulations.) (**7232.**)

TREASURY DEPARTMENT, *December 16, 1885.*

WOOL IMPORTED.—The Department duly received your letter of the 21st ultimo, in which you submitted a question as to whether imported wool (which under the statute pays duty according to its value per pound), when advanced in value on

appraisement over 10 per cent above the entered value, but not sufficient to render it liable to a higher rate of duty, is liable to the additional (penal) duty of 20 per cent ad valorem which is prescribed by section 2900 of the Revised Statutes.

The question was duly referred to the Solicitor of the Treasury, who on the 9th instant submitted an opinion, a copy of which is herewith inclosed, from which it will be seen that he advises that in such cases where an appraisement is made by the appraiser for the purpose of determining the values of imported merchandise, the advance in value of 10 per cent renders the exaction of the said additional duty imperative by the collector, who has no discretion in the matter, because the law fixes his duty.

This opinion seems to accord with article 564 of the Regulations, which prescribes that if the specific duty is all dependent upon value, the additional duty attaches, if the value is advanced 10 per cent or more; and it is apprehended that in the case of all importations where it is essential, under the statute, that the goods should be appraised, the additional duty attaches whenever the appraised value exceeds the entered value by 10 per cent or more. (**7260.**)

The following is the Solicitor's opinion referred to above:

DEPARTMENT OF JUSTICE,
OFFICE OF THE SOLICITOR OF THE TREASURY,
Washington, D. C., December 9, 1885.

SIR: The question is asked me whether the additional duty of 20 per cent ad valorem is incurred under section 2900, Revised Statutes, when the appraised value of wool exceeds by 10 per cent the value declared in the entry, though such appraised value is not sufficient in amount to subject the wool to the higher rate of duty.

The law imposes duties on wool at specific rates regulated by value. For example: wools valued at 30 cents or less a pound are subject to a duty of 10 cents a pound; exceeding 30 cents, 12 cents a pound.

Section 2900 is one of several statutes enacted to require importers to make entry of their goods at their true value.*

In the present case the duty imposed is not an ad valorem one; it is a specific duty of so much a pound, dependent on the appraised value of the pound.

The main object of section 2900 is not, it seems to me, to collect duties. Its purpose is to compel importers to enter their goods at their proper value. For this purpose, when the invoice is produced and the entry is made, the importer is allowed to make such additions in the entry to the cost or value given in the invoice as he may see fit. But if, after entry, the appraised value of the goods exceeds by 10 per cent the entered value, the exaction of 20 per cent duty is made imperative on the collector. He is given no discretion in the matter, because the law fixes his duties. (5 Blatch., 38.)

If I am right, it is immaterial to the question presented whether an advance by appraisement over the entered value increases the duty placed on the goods or not, so long as the appraisement increases the value 10 per cent or more over the entered value.

Such increase being made, the collector is, under the law, to impose the 25 per cent additional duty.

Very respectfully,

A. MCCUE,
Solicitor.

The Hon. SECRETARY OF THE TREASURY.

TREASURY DEPARTMENT, *January 2, 1886.*

MATELASSÉ, WOOL.—The Department duly received your letter of the 16th ultimo, transmitting the appeal (8584 *m*) of Meyer & Dickinson from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain so-called matelassé cloths imported, per *Waesland* and Pennsylvania Railroad, October 30, 1885, and returned by the appraiser at your port as silk, wool, and cotton clothing, or manufactures of wool, dutiable under T. I., new, 365.

* It applies to all goods procured by purchase or otherwise, the duty on which depends on their value.

Reference being made in your letter to Department's decision of April 24, 1885, (synopsis, 6875), in support of your assessment of duty as aforesaid, it is deemed proper to call your attention to a clerical error in said decision in the designation of the paragraph in Schedule K under which duties should be assessed.

In cases where the merchandise is composed in part of wool, the hair of the alpaca, goat, or other animal, and does not fall within the specific provisions for women's and children's dress-goods, coat-linings, Italian cloths, and goods of like description, found in paragraph 365, T. I., new, it should be classified for duty under the provisions therefor in paragraph 362 or 363 of the tariff, and not under paragraph 365, as aforesaid.

The decision referred to will therefore be considered as corrected in the above particular, the principle therein set forth being in nowise modified.

In the present case, it being understood that the merchandise is composed in part of wool and does not fall within the specific provisions of paragraph 365, it is dutiable at the rate assessed under T. I., new, 362, and your assessment of duty is accordingly affirmed. **(7295.)**

TREASURY DEPARTMENT, *January 4, 1886.*

CARRIAGE-ROBES AND TRAVELING RUGS AND BLANKETS.—The Department is in receipt of your letter of the 29th ultimo reporting further on the appeal (6682 *m*) of Messrs. H. H. Schwietering, Stursberg & Co. from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain wool and hair blankets imported by them, per *Neckar*, July 7, 1885.

The appellants claim that the blankets in question are properly dutiable at the rate of 24 cents per pound and 35 per cent ad valorem, under paragraph 363, act of March 3, 1883.

The appraiser reports that the articles in question are carriage robes or traveling rugs, which are not known commercially as blankets, and that they were classified as manufactures of wool and hair under paragraph 362, act of March 3, 1883.

In view of the Department's decision of September 21, 1859 (not published), which held that articles of this character are not blankets within the meaning of the law, your assessment of duty thereon is hereby affirmed. **(7298.)**

TREASURY DEPARTMENT, *January 15, 1886.*

LEATHER JACKETS LINED WITH WOOL.—The Department is in receipt of your letter of the 12th ultimo. transmitting the appeal (8295 *m*) of A. Knudsen from your assessment of duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain skin jackets imported, per *Thingvalla*, November 30, 1885, and returned by the appraiser at your port as wearing-apparel in part of wool, dutiable under the provisions of T. I., new, 366.

It appears from the report of the appraiser that the articles in question are leather jackets or short coats, for men, lined throughout with wool flannel, and that, as there was no provision in the law for leather wearing-apparel, the merchandise was classified as above.

This classification is in accordance with the principle laid down in Department's decisions of April 18 (synopsis, 6862), May 2 (synopsis, 6897), and October 27, 1885 (synopsis, 7184), and your assessment of duty accordingly is hereby affirmed. **(7317.)**

TREASURY DEPARTMENT, *January 27, 1886.*

MOUSSELINE-DE-LAINE DRESS GOODS.—The Department is in receipt of your letter of the 22d instant, transmitting the appeal (1330 *o*) of Messrs. Kaskel & Kaskel from

your decision assessing duty at the rate of 9 cents per square yard and 40 per cent ad valorem upon certain so-called flannels imported, per *Amerique*, October 1, 1885, which the appellants claim to be dutiable at the rate of 35 cents per pound and 40 per cent ad valorem.

It appears, from the report of the appraiser and an inspection of a sample, that the merchandise in question is not flannel, but women's and children's dress goods, consisting of fabrics known as "mousseline-de-laine," manufactured of worsted.

Being women's and children's dress goods, and being composed wholly of worsted, they are dutiable under the provisions of Schedule K (T. I., new, 365) for goods of that description, which is the rate assessed by you.

Your decision is affirmed. **(7331.)**

TREASURY DEPARTMENT, *February 27, 1886.*

MEXICAN WOOLS.—The Department duly received your letter of the 25th ultimo, with inclosures, reporting in the matter of the appeal (1708 *o*) of Mr. James J. Haynes from your assessment of duty at the rate of 10 cents per pound on certain wool imported by him at Laredo on the 4th ultimo, and which was classified by your deputy at that port as wool of class 1, costing under 30 cents per pound, and dutiable under T. I., new, 357.

The appellant claims that the wool in question is carpet wool, or wool of the third class, valued at less than 12 cents per pound, and dutiable, under T. I., new, 359, at the rate of 2½ cents per pound.

The sample referred to by the appellant and forwarded by you has been duly submitted to the appraiser, examiner of wools, and Mr. George William Bond, wool expert, at Boston, all of whom agree that the sample in composed of a very poor quality of Mexican wool mixed with first class or merino wool (the proportion of merino wool on sorting the sample being found to be 24 per cent), and that while the presence of wool of the first class renders the importation liable to the duty assessed, yet it would be manifestly unjust to assess that rate upon such poor material.

This agrees in substance with the reports heretofore received by you from Baltimore and New York, based on other samples of the importation in question.

The Department, therefore, decides that the wool in the present mixed condition is liable to duty at the rate assessed; but in view of the opinions expressed by the customs officials at Boston, as above stated, you are authorized to have importations of mixed wools of this character sorted for purposes of correct classification and to assess duty on the respective quantities of wool of the several classes in accordance with the rates provided therefor in the tariff.

This course may be followed in the present case, and the entry adjusted accordingly, provided the merchandise still remains within your custody and control; otherwise, your assessment of duty will stand affirmed.

The entry received with your letter is herewith returned. Sample returned under another cover. **(7384.)**

TREASURY DEPARTMENT, *March 10, 1886.*

WORSTED COATINGS, COMPOSED IN PART OF WOOL.—The Department is in receipt of your letter of the 4th instant, submitting the appeal (4109 *o*) of Messrs. Sulzbacher, Gitterman & Wedeles from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem, on certain worsted coatings (so called) imported by them, per *Rialto*, August 26, 1885.

The appraiser reports that the goods in question were composed of wool, worsted, and cotton, and that the claim of the appellants that they contained no wool is incorrect.

Goods composed in part of wool are expressly excluded from classification under paragraph 363, act of March 3, 1883, and your assessment of duty on the goods in question, under paragraph 362 of said act, as manufactures * * * made wholly or in part of wool," was correct, and is hereby affirmed. (**7402.**)

TREASURY DEPARTMENT, *March 29, 1886.*

DONSKOI WOOL—The Department duly received your letters of the 28th of November and 2d of December last, respectively, concerning the appeal (7513 *m*) of Wood & Payson, from your decision assessing duty at the rate of 7½ cents per pound on certain wool of the third class imported into your port, per *European*, September 7, 1885, which the appellants claim to be dutiable at the rate of 2½ cents per pound.

The said wool consists of Russian wool known as Donskoi, a coarse carpet wool, which is valued at less than 12 cents per pound in an unwashed condition, and the question involved in this appeal is whether the wool is *scoured*, and liable to "three times the duty to which it would be subjected if imported unwashed" (T. I., new, 356), as classified by you, or whether it is simply washed, and as such liable to the single rate prescribed for third class (carpet-wools) in a washed or unwashed condition (T. I., new, 359), as claimed by the appellants.

This wool, as an inspection of the samples shows, is in the condition in which similar wools have been imported for many years—that is, it has been washed after shearing, and contains about 10 per cent of dirt and impurities.

These Russian Donskoi wools, as a large mass of testimony on file at the Department conclusively indicates, have for the past twenty years and more been imported into the United States in substantially the same condition as the wool in question, and until this instance have invariably been classified by the customs officers as washed; that they have been and are now commercially recognized in Russia as washed, having only undergone the usual process of washing wools practiced in that country, and that manufacturers in the United States who purchase said wools subject them to the process of scouring before using. On the other hand, it is represented that because the wool is washed after it has been sheared from the sheep, and is in a comparatively clean condition, it is *scoured*, but the proofs to sustain such representations are conflicting, unsatisfactory, and inconclusive.

After careful consideration, the Department concludes that as the said wool is of the same character and in substantially the same condition as the Donskoi wools which have been for such a long period of time commercially known and classified as unscoured wools, there is no good reason at this time (the more especially in the absence of any new legislation on the subject) to change the practice by classifying and subjecting it to the greatly increased duty now proposed.

It is, therefore, held that the appeal is well taken, and that the appellants are entitled to a reliquidation of their entry in accordance with their claim.

The views herein expressed will also apply to the entries of all importations of such wools in like condition which await liquidation at your port. (**7438.**)

TREASURY DEPARTMENT, *April 20, 1886.*

WOOL AND MOHAIR NOILS.—I am in receipt of your letter of the 15th instant, transmitting a report from the appraiser at your port concerning the practice in classifying for duty imported wool and mohair noils.

Under the existing rulings of the Department, noils are to be classified as the wools from which they are made, so that if the noils come from class 1 wool, and are either washed or scoured, they should, if washed, pay twice the rate, and, if scoured, three times the rate of duty to which the wool would have been liable if imported

in an unwashed condition. Noils made from class 2 wool and hair of the alpaca, goat, and other like animals (including mohair noils, cashmere noils, etc.), only pay increased duty if imported scoured; and when in that condition they are liable to three times the rate to which the wool or hair is liable in an unwashed condition. If these last-mentioned noils are simply washed and not scoured, they pay but a single rate of duty.

You are directed to cause the practice at your port to conform to these views, and to instruct the appraiser to consider decision, Synopsis, 1404, as modified to accord herewith. **(7470.)**

TREASURY DEPARTMENT, *April 21, 1886.*

WEARDALE CARPETS OR CRUMB CLOTHS.—The Department is in receipt of your letter of the 22d ultimo, submitting the appeals (4629 *o* and 4630 *o*) of The John Shillito Company from your assessment of duty on certain ecru-cotton cloths and weardale carpets imported by them, entries 343, March 3, and 329, March 2, 1886.

* * * * * * *

The claim of the appellants that the weardale carpets are crumb cloths intended to be placed over carpets for their protection, and are not "carpets woven whole for rooms," is also substantiated, and it is ascertained that they are properly dutiable at the rate of 8 cents per square yard and 30 per cent ad valorem, as two-ply ingrain carpets, under the provisions therefor in paragraph 375, act of March 3, 1883, as claimed by the importers.

You are hereby authorized to readjust the entries and to forward a certified statement for refund of the excess of duty. * * * **(7474.)**

TREASURY DEPARTMENT, *April 29, 1886.*

CAMEL'S-HAIR TOPS—The Department duly received your letter of the 9th instant, reporting in the matter of the appeal (4517 *o*) of Cass & Mote from your assessment of duty at the rate of 20 per cent ad valorem on certain so-called camel's-hair tops imported per *Adriatic*, December 21, 1885, and returned by the appraiser at your port as nonenumerated articles partially manufactured, dutiable under section 2513, act of March 3, 1883.

It appears that the merchandise in question consists of camel's-hair tops that have passed through an extensive process of cleaning but are not otherwise manufactured. Reports as to the dutiable character of these tops have been received from the collectors and appraisers at Boston and Philadelphia, and the Department concurs with them in the opinion that such merchandise can not be considered as manufactures within the meaning of the section above cited, but are more properly covered by the provisions of T. I., new, 717 of the free list, for "hair of all kinds, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially enumerated or provided for," and should therefore be admitted free of duty.

The camel's-hair tops in question are inferior to camel's-hair noils, which, by Department's decision of September 20, 1875 (Synopsis, 2447), were held to be included in the provision in the old tariff for "hair of all kinds, cleaned but *unmanufactured*, not otherwise provided for;" nor are the tops in question any further advanced in manufacture than wool tops, which, by Department's decision of February 17, 1881 (Synopsis 4777), were decided *not to be manufactured.*

You are therefore authorized to reliquidate the entry free of duty, in accordance with the views herein expressed, and to take the necessary steps for refunding the duty exacted. **(7488.)**

TREASURY DEPARTMENT, *June 5, 1886.*

WAX FIGURES DRESSED.—The Department duly received your letter of the 14th ultimo, transmitting the appeal (5434*o*) of Mr. Bernstein from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain dressed wax figures imported, per *Suevia*, February 23, 1886, and returned by the appraiser at your port as manufactures in part of wool, not exceeding 80 cents per pound in value, and dutiable under T. I., new, 362.

It appears that the importation in question consists of dressed figures, and that the wool clothing with which the figures are clad is "firmly fastened to them, and could not be removed without taking the whole to pieces; besides, that the legs and arms are stuffed with wool and cotton, and the feet covered with wool socks and shoes."

In the opinion of the Department the figures and clothing constitute one article, the components of which are not readily separable for purposes of classification, and that accordingly the rule laid down in the last paragraph of article 553, General Regulations, does not apply, the figures being dutiable as entireties.

Neither does the rate applicable to wool wearing apparel apply, as the articles of clothing have lost their identity as wearing apparel by being firmly fastened to the figures, so that they could not be removed without taking the whole to pieces.

The dressed figures, therefore, may be considered as composed of wax, cotton, wool, leather, and other materials, and being thus made in part of wool are liable to duty at the rate assessed in this case.

Your assessment is accordingly affirmed. (*See* synopses, 2607, 3005, 4811, and 6650.)*a* (**7566.**)

TREASURY DEPARTMENT, *June 19, 1886.*

WOOL ON "SHEARLINGS."—The Department duly received your letter of the 3d instant, relative to the application of Abram S. Smith & Co. for refund of duties alleged to have been illegally exacted on certain 70 bales of sheepskins imported by them at your port on May 4 last.

It appears from an inspection of the samples submitted, and from reports received thereon from the collector and appraiser at Boston, that the skins in question are what are known as shearlings, and are entitled to free entry under the provision in paragraph 719 of the free list, act of March 3, 1883, for "hides, raw or uncured, * * * and skins, except sheepskins with the wool on," and in accordance with Department's decision of June 30, 1879 (Synopsis, 4069).

The imposition by you, therefore, of duty on the small quantity (estimated at about 2½ ounces) of wool found on each skin, which the appraiser at Boston reports to be too short for commercial value, was not warranted under the circumstances, and you are accordingly authorized to reliquidate the entry free of duty and to take the necessary steps for refunding the duty exacted. * * * (**7588.**)

TREASURY DEPARTMENT, *June 19, 1886,*

WOOL, SNOW-WHITE CAPE—CLASSIFIED AS "SCOURED."—The Department is in receipt of your letter of the 21st ultimo, transmitting the appeal (5530*o*) of E. A. Adams & Co. from your decision assessing duty at the rate of 30 cents per pound on certain so-called "colonial wool" imported into your port, per *Pieter de Connick* (67 bales), *Stockholm City* (95 bales), and *Durham City* (124 bales), in March last, which the appellants claim to be dutiable at the rate of 20 cents per pound, as *washed* wool.

---

a The only decision referring to wax figures is that numbered 4811.

It appears that wool of this character, which is known as "snow-white cape," has for a long period, since the year 1873, been classified at your port as washed wool, but that, on receipt of Department's telegraphic instructions to you of the 1st of March last, such practice was changed, and that as the importations occurred after the last-named date, you classified the wool in question as "scoured," and assessed duty thereon accordingly.

The result of the investigation heretofore made by the Department in the matter showed conclusively that such wool is admitted on all hands, both at the ports of New York, Philadelphia, and elsewhere, to be *scoured*, and that it has always been classified at those ports as such, the same now paying a duty of 30 cents per pound under the provisions of Schedule K.

The Department must, therefore, hold that wool of this character can not be admitted at a less rate of duty than that prescribed for scoured wool.

In view, however, of the fact that the wool covered by the entries in question was ordered by the importers during the continuance of the practice at your port above mentioned, and was actually on the voyage bound to your port at the date of such telegraphic instructions aforesaid, viz, on the 1st of March last, the Department is of opinion that the appellants are entitled, in all equity, to have the wool classified as washed, in accordance with the practice then in force at your port, which was inaugurated by a communication addressed by the Department to the collector of customs at Boston on November 15, 1873 (not published).

The Department, therefore, excepts the entries in question from the operation of said instructions of the 1st of March last, and authorizes you to reliquidate the same by classifying the wool as washed.

It will be distinctly understood, however, that other importations of similar wools shall be classified as *scoured* under the said instructions. **(7589.)**

TREASURY DEPARTMENT, *July 2, 1886.*

GOAT'S HAIR.—I have your letter of the 9th ultimo and samples further relating to the classification under the tariff acts of imported goat's hair.

The sample you submit undoubtedly represents a poor quality of goat's hair. For the purpose of such classification, however, it is immaterial how poor in quality or for what use the goat's hair may be intended, inasmuch as it is clearly and expressly provided for in Schedule K by the clause to which your attention was directed by Department's communication of the 27th of May last, "all hair of the * * * goat," and is dutiable at 10 cents per pound. **(7614.)**

TREASURY DEPARTMENT, *July 8, 1886.*

LACE GOODS, WOOL.—The Department is in receipt of your letter of the 17th ultimo, submitting the appeal (6206*o*) of Messrs. Letson & Hashagen from your assessment of duty at the rate of 9 cents per square yard and 40 per cent ad valorem on certain "all-wool laces" imported by them, per *Labrador*, March 4, 1886.

The goods in question, it appears, are wool lace dress goo ds, 41 inches wide, used for women's and children's dresses, and similar to those covered by the Department's decisions of May 13 and 24, 1886 (not published), and held to be dutiable under the provision in paragraph 365, act of March 3, 1883, "for women's and children's dress goods."

The claim of the appellants that the goods are dutiable at the rate of 35 cents per pound and 40 per cent ad valorem is therefore rejected. **(7621.)**

TREASURY DEPARTMENT, *July 8, 1886.*

SHOES, CHINESE—WEARING APPAREL IN PART OF * * * HAIR.—The Department is in receipt of your letter of May 18 last, submitting the appeal (5449*o*) of Quong Wah Lung from your assessment of duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain Chinese shoes imported by him (entry No. 7459) December 30, 1885.

The appellant claims that the shoes in question, which are composed of cotton, leather, and pith, are dutiable at the rate of 35 per cent ad valorem, as "manufactures of cotton not specially enumerated or provided for."

The appraiser reports that the soles of the shoes, which are about 1 inch in thickness, are composed largely of hair, and that they were therefore classified for duty under the provision in paragraph 366, act of March 3, 1883, for "wearing apparel of every description * * * composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals."

An examination of the sample submitted confirms the report of the appraiser, and, as the hair forms a substantial component material in the shoes, the Department decides that they are properly dutiable as classified, and your decision is hereby affirmed. * * * (**7622.**)

TREASURY DEPARTMENT, *July 10, 1886.*

"CROISE."—The Department is in receipt of your letter of the 22d ultimo, submitting the following appeals from your assessment of duty at the rates of 24 cents per pound and 35 per cent ad valorem, and 35 cents per pound and 40 per cent ad valorem on certain so-called dress goods embraced therein, viz: 6258 *o*, G. W. Sheldon & Co., *Rhaetia*, April 1, 1886; 6259 *o*, Sullivan, Vail & Co., *Zeeland*, December 16, 1885; 6260*o*, Sullivan, Vail & Co., *Rhynland*, January 16, 1886.

From the report of the appraiser and the sample submitted, it appears that the goods in question are known as "croise," and consist of worsted and cotton goods of light weight, which are known commercially as worsted coatings, and not as women's and children's dress goods, and that they were classified for duty as "manufactures of worsted and cotton," under paragraph 363, act of March 3, 1883.

In a letter addressed to you under date of May 13, last (not published), the Department decided that these goods were not entitled to entry as women's and children's dress goods and the claim of the appellants is therefore rejected. (**7624.**)

TREASURY DEPARTMENT, *July 14, 1886.*

WORSTED DRESS GOODS, WOMEN'S AND CHILDREN'S—"FANCY ZEPHYR" CLOTH.—The Department is in receipt of your letter of the 10th instant, transmitting the appeal (6673 *o*) of Messrs. Shepard, Norwell & Co., from your assessment of duty at the rate of 7 cents per square yard and 40 per cent ad valorem on certain so-called cotton cloth, or "fancy zephyrs," imported by them, per *Carthaginian*, March 31, 1886, and claimed to be dutiable only at 40 per cent ad valorem.

From the report of the appraiser and an inspection of the sample submitted it appears that the merchandise in question consists of cloth the body of which is of cotton and which is ornamented by being partly covered with tufts of worsted, and that this worsted adds largely to the value of the goods.

This cloth is evidently manufactured for women's and children's dress goods, and is therefore specially provided for in T. I., new, 365, and when valued at above 20 cents per square yard is dutiable at the rate assessed in this case.

Your assessment is hereby affirmed. (**7630.**)

TREASURY DEPARTMENT, *September 20, 1886.*

HOSIERY SAXOLAINE.—The Department is in receipt of your letter of the 9th instant, submitting the appeal (7700 *o*) of Messrs. Claflin, Larrabee & Co., from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain saxolaine hosiery imported by them, per *Glaucus*, July 22, 1886.

The appellants claim that the quantity of wool contained in the stockings is too insignificant to govern the classification, and that they are dutiable at the rate of 40 per cent ad valorem.

The appraiser reports that the stockings are composed of cotton and wool, and that, although of comparatively small value, the merino sole gives to them their distinctive character, the word "saxolaine" being printed on the foot, and the label being marked "medicated merino."

The Department decides that the stockings, being knit goods, were properly classified as such, under paragraph 363, act of March 3, 1883, and your assessment of duty thereon is hereby affirmed. * * * (**7756.**)

TREASURY DEPARTMENT, *November 11, 1886.*

WOOL WASTE—SWEEPINGS, TAGS, ETC.—I am in receipt of your letter dated the 3d instant, transmitting a communication from Messrs. Bissinger & Co., dated the 2d instant, and requesting to be informed as to the proper classification of certain wool imported into your port, a sample of which you inclose.

The wool, it appears, consists of "sweepings" and "tags," so called, of clothing-wool, which have been picked up on the ranges after the winter is past, and from sheep which perished during snowstorms, etc. It is in a very rotten and dirty condition, and is evidently worthless for the purposes for which wool is used, it being fit only for use, after being cleaned, in stuffing carwheels over the axle to absorb the oil or tallow used in feeding the axles.

Although not, perhaps, the woolen waste of commerce, which is specified in Schedule K (T. I., new, 361) it would seem to assimilate to that article. The opinion is, therefore, expressed that it is dutiable at the rate of 10 cents per pound, either as woolen waste or first-class wool. If the importers are dissatisfied with such classification they have their remedy by protest and appeal, under section 2931 of the Revised Statutes. (**7860.**)

TREASURY DEPARTMENT. *November 12, 1886.*

MIXED WOOLS.—The Department is in receipt of your letter of the 9th instant, in regard to the classification of certain Mexican wool imported at Laredo, Tex., and transported thence in bond to your port consigned to Messrs. F. Probst & Co.

The appraiser at your port reports that upon the examination of the three bags ordered to the appraiser's store, it was found that they contained a percentage of medium clothing or class 1 wool, mixed with carpet or class 3 wool; that he examined the rest of the importation, with the same result, and that the whole importation was classified as class 1 wool, under the provisions of section 2912, Revised Statutes.

The deputy collector at Laredo, it appears, sorted the wool in question, and classified it partly as first and partly as third class wool, and his action in the premises, being in conformity with the Department's instructions of February 27, 1886 (synopsis, 7384), is approved.

Section 2912, Revised Statutes, referred to by you, does not appear to have any bearing on this case, inasmuch as it relates to different *qualities*, and *values* of the same *class* of wool, and not to different classes, when contained in the same package, and you are therefore instructed to liquidate the entry in accordance with the classification made at Laredo. * * * (**7863.**)

TREASURY DEPARTMENT, *December 3, 1886.*

BROCHÉ CARPETS.—The Department is in receipt of your letters of the 13th ultimo, submitting the appeals (9019 *o* and 9020 *o*) of Messrs. Mandel Bros. from your assessment of duty at the rate of 30 cents per square yard and 30 per cent ad valorem on certain Broché carpets imported by them at your port, entries Nos. 5787, September 20, and 5551, September 13, 1886.

The appellants claim that the carpets in question are entitled to entry at the rate of 40 per cent ad valorem, under the provision in paragraph 378, act of March 3, 1883, for "carpets and carpetings of wool * * * not otherwise herein specified."

The appraiser reports that the carpets are Brussels carpets, in which a portion of the threads have been cut to bring out certain figures in imitation of the figures in Wilton carpets, and that, as Brussels carpet was the chief feature, they were classified under the provision in paragraph 371, act of March 3, 1883, for "Brussels carpets."

The appraiser at New York reports that the cutting of the pile or thread on part of the figures in carpets of this description does not remove the carpets from the category of Brussels carpets, and that they are so classified at that port.

This classification is in harmony with the Department's decision of August 20, 1884 (synopsis, 6538), on Byzantine carpets, and your assessment of duty is hereby affirmed. **(7894.)**

TREASURY DEPARTMENT, *December 9, 1886.*

HAIR FELT.—The Department is in receipt of your letter of October 26 last, submitting the appeal (8747 *o*) of Messrs. G. W. Sheldon & Co., from your assessment of duty at the rate of 18 cents per pound and 35 per cent ad valorem on certain hair felt, so called, imported at your port, entry No. 4736, August 14, 1886, and claimed to be dutiable at the rate of 30 per cent ad valorem, under the provisions in paragraph 445, act of March 3, 1883, for "all other manufactures of hair not specially enumerated or provided for.

The sample of the felt has been submitted to the appraiser at New York, who reports, under date of the 30th ultimo, that upon chemical analysis it was found to be composed of wool and hair felted.

It is, therefore, dutiable at the rate of 35 cents per pound and 35 per cent ad valorem, under the provision in paragraph 362 of said act, for "all manufactures of wool of every description made wholly or in part of wool," and in accordance with Department's decision of April 26, 1886 (unprinted).

You will, therefore, readjust the entry at that rate and take measures for collecting the duties still due thereon. **(7912.)**

TREASURY DEPARTMENT, *December 10, 1886.*

RING WASTE.—I inclose herewith, for your guidance and information, copy of a decision rendered this day as to the dutiable character of so-called ring waste, an importation of which it appears recently arrived at St. Albans, in your district, and was forwarded to New York in bond, the entry being liquidated at the rate of 30 per cent ad valorem, as scoured wool.

The waste in question is not of the same character as the "slubbings," "tops," etc., which were the subject of Department's decision (Synopses, 5820 (*a*) and 6884), referred to in your letter of the 22d ultimo to the collector at New York, inasmuch as it consists of the refuse from the spindles, having been wound thereon, and so

---

a See note to No. 6884.

can not be utilized without being broken by machinery, thus destroying the fiber of the wool and the utility of the article for other purposes than that of waste.

* * * * * * *

You are requested to inform your deputies at St. Albans and elsewhere of the nature of the inclosed ruling, in order that this article may be properly classified hereafter. (**7915.**)

TREASURY DEPARTMENT, *January 8, 1887.*

SLIPPER PATTERNS—EMBROIDERED.—The Department is in receipt of your letter of the 31st ultimo, transmitting the appeal (9538 *o*) of Mr. H. E. Frankenberg from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain embroidery on cotton imported by him, per *Werra*, August 18, 1886.

It appears, from the report of the appraiser and an inspection of the sample submitted, that the goods in question are commercially known as "cotton slipper patterns," and that they are embroidered with worsted, and valued at over 80 cents per pound.

Your assessment of duty thereon, being in accordance with T. I., new, 363, and Department's decisions of April 22, 1884 (Synopsis, 6309), and April 16, 1885 (unpublished), is hereby affirmed. (**7965.**)

TREASURY DEPARTMENT, *January 13, 1887.*

REAPPRAISEMENTS OF WOOL.—The Department is in receipt of your letter of the 7th instant, in which, stating a case which comes before you under section 2930 of the Revised Statutes, where the general and merchant appraisers have disagreed as to the value of certain imported wool, you call attention to the fact that while the law imposing duty on wools prescribes that the value at the last port or place whence imported to the United States shall fix the classification, the oath taken by the merchant appraiser requires him to report "the actual market value or wholesale price thereof * * * in the principal markets of the country from which the same was imported into the United States." You state that the oath being at variance with the language of the statute, the same is, in your opinion, inoperative, and makes the whole action of the merchant appraiser a nullity, since the oath requires him to disregard the law.

As requested in your letter, the matter was submitted to the Solicitor of the Treasury for his opinion, and I now transmit herewith a copy of a letter from that officer, dated the 12th instant, which embodies his views on the question submitted.

You will notice that the Solicitor advises that the oath to be administered to the merchant appraiser, in the case of reappraisements of wool, should conform to the requirements of the statute making it obligatory upon him to report the values of the wools at the last port or place whence they are exported to the United States.

The Department concurs with the Solicitor in the opinion thus expressed, and you will be governed accordingly. (**7978.**)

TREASURY DEPARTMENT, *January 18, 1887.*

SADDLEBAGS.—The Department is in receipt of a letter, dated the 8th instant, from the U. S. general appraiser at Philadelphia, in which he reports that, according to a statement received from your port, saddlebags of which Brussels carpet forms the component material of chief value appear to have been classified at the rate of 30 cents per square yard and 30 per cent ad valorem, under the provision in Schedule K (T. I., new, 371) for "Brussels carpets."

Referring to Department's decisions of June 25, 1883 (Synopsis, 5776), and August 10, 1883 (Synopsis, 5853), you are informed that, in the opinion of the Department, saddlebags are dutiable at the rate provided in Schedule N. (T. I., new, 415) for "saddlery," viz, 35 per cent ad valorem. (**7990.**)

TREASURY DEPARTMENT, *January 21, 1887.*

GOAT HAIR OF THE COMMON GOAT UNFIT FOR COMBING PURPOSES.—The Department is in receipt of your letter of the 4th instant, further reporting on the appeal (8785 *o*) of Mr. Henry Schmidt from your decision assessing duty at the rate of 10 cents per pound on certain raw hair of the common goat imported, per *British King*, on the 2d of August last, which the appellant claims to be exempt from duty.

The appellant represents that the hair in question is refuse common goat hair, unfit for combing purposes, which can only be utilized in mixing mortar, stuffing saddlery, etc., and an inspection of samples verifies such representations.

It is urged by you that goat hair of this character which is totally unfit for combing purposes is not covered by the provisions of Schedule K (T. I., new, 354 and 358), which relate to "class two, *combing wools*, * * * and also all hair of the alpaca, goat, and other like animals," but is exempt from duty under the provision in the free list (T. I., new, 717) for "hair of all kinds * * * unmanufactured," etc.

This question was to a certain extent considered by the court in the case of the United States *v.* McNeely recently decided at Philadelphia, where it was held that goat hair unfit for combing purposes was exempt from duty as aforesaid. The U. S. Attorney-General also, to whom the matter was submitted, by a letter dated the 15th instant, advises that, in his opinion, the decision of the court was right, and that goat hair unfit for combing purposes is entitled to free entry, under the provision in the "free list," above referred to.

The Department concurs in such views, and holds that the said appeal is well taken, and that the common goat hair in question is exempt from duty.

You will reliquidate the entry accordingly, and, if necessary, take the usual steps for refunding the duties erroneously exacted.

The previous rulings of May 27 and July 2, 1886 (Synopses, 7544 and 7614), will be considered as modified to accord herewith. (**7999.**)

TREASURY DEPARTMENT, *February 1, 1887.*

CROISE.—The Department duly received your letter of the 18th of December last, transmitting the appeal (9765 *o*) of Messrs. Kahn Bros., Bine & Co. from your decision assessing duty at the rate of 9 cents per square yard and 40 per cent ad valorem on certain so-called "croise" imported into your port, per rail from New York, under immediate-transportation entry 1951, August 17 last, which was returned by the appraiser at your port as "worsted dress goods," weighing under 4 ounces per square yard.

The appellants, however, claim that the merchandise in question consists of manufactures of worsted, or "worsted coatings," dutiable at the rate of 24 cents per pound and 35 per cent ad valorem, under the provisions of paragraph 363, T. I., new, and Department's decision of July 10, 1886 (Synopsis, 7624).

It appears from a report received from the appraiser at New York, to whom samples of the merchandise were submitted, that they represent what are commercially known as "women's and children's dress goods," and are used entirely as such, being composed wholly of worsted, 40 inches wide and weighing about 3 ounces to the yard, whereas the merchandise covered by the decision above referred to is composed of cotton in the warp and worsted in the weft, 54 inches wide, weighing about 6½ ounces to the yard, and is used for *men's* wear.

The merchandise in question, therefore, being in fact women's and children's dress-goods, and being composed wholly of worsted, is dutiable under the special provision therefor in Schedule K (T. I., new, 365), of the act of March 3, 1883, at the rate assessed by you in this case.

Your decision is hereby affirmed. (**8020.**)

TREASURY DEPARTMENT, *February 11, 1887.*

"GLORIA CLOTH."—The Department is in receipt of your letter of the 27th ultimo, submitting the following appeals of Messrs. Bister & Schmidt from your assessment of duty at the rate of 7 cents per square yard and 40 per cent ad valorem on certain "gloria cloths" imported by them.

* * * * * * *

The appraiser reports that the goods in question, which vary in width from 46 to 120 centimeters, and are composed of silk in the warp and worsted in the weft, are similar to women's and children's dress-goods, and are dutiable at the rate assessed, under paragraph 365, act of March 3, 1883, and the Department's decision of April 15, 1885 (not published).

Your assessment of duty thereon is hereby affirmed. (**8050.**)

TREASURY DEPARTMENT, *February 25, 1887.*

NOILS.—On the 20th of April, 1886 (synopsis 7470), the Department instructed you as follows:

Under the existing rulings of the Department noils are to be classified as the wools from which they are made, so that if the noils come from class 1 wool, and are either washed or scoured, they should, if washed, pay twice the rate, and, if scoured, three times the rate of duty to which the wool would have been liable if imported in an unwashed condition. Noils made from class 2 wool and hair of the alpaca, goat, and other like animals (including mohair noils, cashmere noils, etc.), only pay increased duty if imported scoured, and when in that condition they are liable to three times the rate to which the wool or hair is liable in an unwashed condition.

If these last-mentioned noils are simply washed and not scoured, they pay but a single rate of duty.

It is understood that under these instructions imported noils are now habitually classified as scoured wools, it being held that *all* noils come from scoured wools, and that the fact of their original production makes them liable under such instructions to the rate of duty prescribed by the statute for scoured wools.

It was not the intention, however, by such instructions to cause such a practice to prevail, but simply to have all imported noils classified in accordance with the condition in which they may be when imported—that is to say, if in a scoured condition, to pay duty as scoured wool; if washed, as washed wool, etc.

Noils are the product of combing scoured and washed wools, and consist of tufts of short hair which contain all the impurities of such wools, with the addition of the oil and grease which may adhere to the noils in the process of combing.

The appraisers should therefore be instructed upon the importation of any noils to make a careful examination thereof, and if it is found that the noils are in such a condition as to be commercially known as washed, to return them as such, in order that the triple rate of duty shall only be imposed when such examination clearly demonstrates that the noils are in a scoured condition. (**8070.**)

TREASURY DEPARTMENT, *March 9, 1887.*

ELASTIC GAITER-WEBBING.—The Department is in receipt of your letter of the 1st instant, reporting further on the appeal (164*p*) of Messrs. Salomon & Phillips from your assessment of duty at the rate of 30 cents per pound and 50 per cent ad valorem

on certain webbing imported by them, per *Etruria*, April 19, 1886, and claimed to be dutiable at the rate of 30 per cent ad valorem, under the provision in paragraph 453, act of March 3, 1883, for "India-rubber fabrics, composed wholly or in part of India rubber."

The appraiser reports that the merchandise in question was elastic gaiter-webbing, composed of worsted, cotton, and India rubber, and that it was classified as "webbing * * * wrought by hand or braided by machinery * * * of which * * * worsted * * * is a component material," under the provision therefor in paragraph 368, act of March 3, 1883, and the Department's decision of April 23, 1886 (not published).

The decision of the U. S. Supreme Court in the case of *Beard* v. *Nichols et al.*, which was acquiesced in by the Department on the 19th ultimo (not published), and which covered similar goods imported prior to the time when the act of March 3, 1883, went into effect, is not applicable to importations under said act, inasmuch as the term "webbing" is not used in the new act, and the decision is based on the use of that term in the old act (T. I., old, 388).

Your assesment of duty is hereby affirmed. (**8102.**)

TREASURY DEPARTMENT, *March 22, 1887.*

EMBROIDERED BATH WRAPS AND SLIPPERS.—The Department is in receipt of your letter of the 16th instant, reporting further on the appeals (457*p* and 457½*p*) of Messrs. Richardson & Gerts from your assessment of duty at the rate of 40 cents per pound and 35 per cent ad valorem on certain bath wraps and sandals imported by them, per *Samaria*, December 6, 1886, and *Glaucus*, January 24, 1887.

Protest not having been filed in due time for the entry per *Samaria*, the Department declines to entertain the appeal 457*p*.

The appellants claim that the wraps in question, which are made of cotton Turkish toweling, embroidered with colored worsted, are properly subject to duty at the rate of 35 per cent ad valorem as "cotton goods."

The appraiser reports that the embroidery is sufficiently elaborate to greatly enhance their value and become an important material in their construction, and that, in his opinion, the worsted should govern their classification.

An inspection of the samples submitted shows that the articles are loose wraps and sandals, intended for use in the bath, which are composed of Turkish toweling, and are elaborately and expensively embroidered with worsted down the front on each side, on the hood, and on each sleeve, the embroidery probably forming the chief element of value, and certainly forming a leading feature; and the sandals are also embroidered in the same style as the robe.

The Department is therefore of opinion that they were correctly classified for duty under the provision in paragraph 366, act of March 3, 1883, for "clothing, ready-made, and wearing apparel of every description * * * composed wholly or in part of wool, worsted, * * * made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer." (*See* synopses 2134, 2678, 2694, 2712, and 3712.)

Your decision is hereby affirmed. (**8126.**)

TREASURY DEPARTMENT, *March 24, 1887.*

HORSE-CLOTHING.—The Department is in receipt of your letter of the 19th instant, transmitting the appeal (1512*p*) of the Studebaker Bros.' Manufacturing Company from your decision assessing duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain horse-clothing imported into the port of New York, per *Germanic*, January 20, 1887, and thence transported to your port under immediate-transportation entry No. 26.

The appellants claim the articles are dutiable only at the rate of 35 per cent ad valorem, under the provisions in T. I., 415, for "coach and harness furniture of all kinds, saddlery," etc.

It appears from the report of the appraiser submitted with your letter that the clothing in question, which is composed principally of wool, consists of such articles as hoods and bandages for the legs, etc., none of which form a part of or are essential to the articles enumerated in T. I., 415.

The clothing in question is not specially enumerated or provided for in the tariff, and, being composed in part of wool, is dutiable at the rate assessed by you, under the provision in T. I., 362, for "manufactures * * * made wholly or in part of wool."

Your decision therefore is hereby affirmed. (**8132.**)

TREASURY DEPARTMENT, *March 28, 1887.*

WORSTED VEILINGS.—The Department is in receipt of your letter of the 22d instant, transmitting the appeal (1526 *p*) of Messrs. S. Oppenheimer & Levy from your assessment of duty at the rate of 9 cents per square yard and 40 per cent ad valorem on certain so-called "worsted veilings" imported by them, per *St. Laurent*, December 30, 1885, and returned as "all-wool dress goods," the appellants claiming the same to be dutiable at 35 cents per pound and 40 per cent ad valorem, as a manufacture of worsted not specially enumerated or provided for.

It appears, from the report of the appraiser and an inspection of the sample submitted, that the merchandise in question is a manufacture exclusively of wool, and known and used almost exclusively for women's and children's dress goods. It was, therefore, correctly classified for duty under T. I., new, 365.

Your assessment of duty is affirmed. (**8140.**)

TREASURY DEPARTMENT, *April 21, 1887.*

MIXED WOOLS.—In reply to your letter of the 11th instant, in which you inquire if, when "mixed wool is imported and it is required to be sorted for the purposes of correct classification and assessment of duty, as permitted by Department's decision of February 27, 1886 (Synopsis 7384), it is necessary to separate the respective classes and repack them in separate bags or whether a thorough examination and determination of the quantity of each class will suffice," you are informed that the sorting referred to in said decision should not be resorted to except in cases where the correct classification of the wool can not be otherwise determined, and was only authorized by the Department in order to provide for the assessment of duty on importations of mixed wool at the rates applicable to the respective quantities of each class therein contained, instead of at the rate applicable to the highest of said classes, which would otherwise have to be imposed.

In cases, therefore, where the correct classification and determination of the quantity of each class of wool can, as suggested by you, be arrived at without sorting the same, no objection is seen to the adoption of that course, provided, however, that the importers assent and waive all objections thereto in writing; otherwise duty should be assessed either at the rate applicable to the highest class of wool found in the mixed packages, or at the rates applicable to the several classes as ascertained by sorting. (**8187.**)

TREASURY DEPARTMENT, *April 22, 1887.*

SADDLE FELT.—The Department is in receipt of your letter of the 15th instant, transmitting the appeal (2013 *p*) of Mr. J. H. Fenton from your decision assessing duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain saddle-

felt imported by him into the port of New York, thence transported under immediate-transportation entry No. 2908, and entered for consumption under entry No. 1421, March 5, 1887.

The appellant claims that said saddle felt is dutiable at the rate of 35 per cent ad valorem only under the provision in Schedule N (T. I., 415) for saddlery not specially enumerated or provided for.

The appraiser in his special report upon this appeal states that the felt in question is in the piece, not having been manufactured in any manner such as to characterize it as saddlery or harness; that it may be used for other purposes, and that it was classified by him according to material under paragraph 362 of Tariff Indexed.

It appearing that said felt in the piece is in part manufactured of wool and is valued at not over 80 cents per pound, your decision assessing duty thereon at the rates specified in said paragraph 362 for manufactures made wholly or in part of wool, and not over 80 cents per pound in value, is hereby affirmed. **(8188.)**

TREASURY DEPARTMENT, *May 27, 1887.*

"BRACE AND GIRTH WEBBING."—The Department is in receipt of your letter of the 11th ultimo, submitting the appeal (1889 *p*) of Mr. J. H. Fenton from your assessment of duty at the rate of 30 cents per pound and 50 per cent ad valorem on certain brace and girth webbing imported by him at your port, entry No. 1421, March 5, 1887.

The appellant claims that the webbing in question is manufactured and used solely for saddle-girths, and that it is entitled to entry at the rate of 35 per cent ad valorem, under the provision in paragraph 415 for "saddlery."

The appraiser reports that the goods are invoiced as "girth-web" and "worsted binding," and that they are sold by the piece; have not been advanced beyond the condition of webbing, and may be used for purposes other than the manufacture of harness.

The goods, not having been made into saddle-girths, are not in their present condition embraced in the term "saddlery," and the claim of the appellant is therefore rejected.

In view of the statement of the appellant that these goods are admitted to entry at New York at the rate of 35 per cent ad valorem, I have to inform you that the collector of customs at that port reports, under date of the 23d instant, that they are classified for duty at the rate assessed by you under paragraph 368, act of March 3, 1883, viz, 30 cents per pound and 50 per cent ad valorem. **(8255.)**

TREASURY DEPARTMENT, *June 2, 1887.*

MERINO HOSE.—The Department duly received your letter of the 10th ultimo, transmitting the appeal (2516 *p*) of Messrs. Wilson Bros. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain so-called merino hose, imported at your port from New York, under I. T. entry 5782, and claimed by the appellants to be dutiable at the rate of 40 per cent ad valorem under T. I. 323.

It appears from reports received from the appraiser at your port and the collector and appraiser at New York, and from an examination of the samples submitted, that the articles in question are composed in part of wool, the wool having been sifted in during the process of knitting, the threads being composed entirely of cotton.

Under the provisions of T. I. 363, all goods made on knitting-frames, composed wholly or in part of worsted, and under the provisions of T. I. 362, all manufactures made wholly or in part of wool are dutiable, when valued at above 80 cents per pound, at the rate of 35 cents per pound and 40 per cent ad valorem.

As these goods fall within the description given they are dutiable at the rate assessed, and your decision is accordingly affirmed.

The statement of the appellants that such goods have been and are admitted at New York at the rate claimed by them is controverted by the appraiser at that port, who states that they are invariably returned for duty at the rate assessed in this case. * * * (**8265.**)

TREASURY DEPARTMENT, *June 3, 1887.*

WOOLS—SCOURED AND WASHED.—The Department is in receipt of your letter of the 24th of January last, transmitting the appeal (129 *p*) of Wood & Payson from your decision assessing duty at the rate of 7½ cents per pound on certain wool imported by them into your port, per *Salerno*, on the 9th of November last, which the appellants claim to be dutiable at the rate of 5 cents per pound.

The question involved is whether the said wool is *scoured* as classified by you, or *washed* as claimed by the appellants.

This case does not differ in any essential feature from that decided in Synopsis 7438, March 29, 1886, and that case seems to have been very fully and carefully considered, and no good reason is now advanced why the rule there laid down should not be adhered to. In the present case the proofs submitted are quite conclusive that the wool in question is of the same brand, quality, and condition, and cleansed by precisely the same process as the wool which was the subject of that decision.

A chemical analysis discloses the presence of only 2½ per cent more of pure wool fiber, which can not of itself be regarded as sufficient evidence that the wool has been subjected to a different process of cleansing.

The provision in the tariff act of 1883, paragraph 356, that "the duty on wools of all classes, which shall be imported scoured, shall be three times the duty to which they would be subjected if imported unwashed," is identically the same language which was used in the tariff act of 1867 (14 Stats., 560), and the decisions of the Treasury Department from that time until the present have uniformly been to the effect that the terms "washed" and "scoured" as used in the tariff acts have reference to the processes to which the wool is subjected in preparing it for market or manufacture; the former being used to designate the ordinary process of washing in clear water at a temperature of about 70 degrees, and a subsequent rinsing in water of the same temperature; and the latter to denote the method employed of still further cleansing the wool by subjecting it to the action of soap, alkalies, and other chemicals in water at a high temperature, and usually by the aid of machinery.

This construction of the Treasury Department of the tariff act of 1867 must have been well known to Congress at the time of the adoption of the act of 1883, and it is to be presumed that it was satisfactory to that body, and that by the repetition of the language in the act of 1883 it was intended that this construction should continue to prevail.

Following, therefore, the long-established practice governing importations of wool of this character, the Department sustains the appeal, and decides that the wool is dutiable at the rate of 5 cents per pound as washed wool of the third class, costing over 12 cents per pound.

You will reliquidate the entry accordingly, and if necessary take the usual steps for refunding the excessive duties exacted. (**8268.**)

TREASURY DEPARTMENT, *June 3, 1887.*

LLAMA TENNIS CLOTH AND LAWN-TENNIS SUITINGS.—The Department duly received your letter of April 21 last in regard to a difference of practice at your port and New York in the classification of certain goods composed of a cotton warp and wool filling, and commercially known as "novelty Scotch flannels."

These goods, it appears, were invoiced as "Llama tennis cloth," "lawn tennis suitings," and by various other names, and they are classified at your port under

the provisions of paragraph 365, act of March 3, 1883, for "women and children's dress goods," while at New York they are classified under the provision in paragraph 363 of said act for "flannels."

It is ascertained, upon investigation, that they are generally known to the trade both in this country and in Scotland, where they are principally manufactured, as "flannels."

The Department, therefore, decides that they are dutiable under the special provision for flannels above cited, and you will, therefore, cause the practice at your port to be amended accordingly.

The samples submitted with your report do not represent the goods in question, which it appears differ only from the flannels heretofore imported, in that they contain what is known as "boucle" stripes, and the samples appear to be correctly classified, with exception of two, marked "C," which are flannels. * * * (**8269.**)

TREASURY DEPARTMENT, *July 13, 1887.*

THREAD WASTE.—The Department is in receipt of your letter of the 7th instant, transmitting the appeal (3619*p*) of J. W. Tattersfield from your decision assessing duty at the rate of 10 cents per pound on certain worsted waste imported into your port, per *Martello*, on the 7th of April last, which the appellants claim to be dutiable at the rate of 10 per cent ad valorem.

It appears from your report and that of the appraiser that the merchandise in question is a worsted waste, which is known commercially as thread waste; that it is in the condition in which it is dropped from or was broken on the machine, and that it is similar in character and condition to the thread waste which has for many years been imported and subjected to the rate of duty as assessed by you.

This thread waste, it is understood, when broken up and put through the garnetting machine becomes practically wool, and as such is used in adulterating other wool in making cloths, dress goods, etc.

In the opinion of the Department, the merchandise was properly classified under the provision in Schedule K, T. I., 361, for "woolen rags, shoddy, mungo, *waste*, and flocks," dutiable at the rate of 10 cents per pound.

Your decision is affirmed. (**8340.**)

TREASURY DEPARTMENT, *August 16, 1887.*

"DENTELLES."—Your letters of May 25 last were duly received, submitting the following appeals from your assessment of duty at the rate of 9 cents per square yard and 40 per cent ad valorem on certain silk and woolen goods (dentelle) embraced therein.

* * * * * * *

The goods in question are composed of woolen lace, the woollen threads between the figures being wrapped with silk, and the appraiser at your port is of the opinion that the silk, which is comparatively small in quantity, is added solely for the purpose of changing the classification of the goods.

Samples of the goods having been submitted to the appraisers at New York and Boston, those officers are of the opinion that the silk is introduced to insure the strength and durability of the goods, and not for the purpose of affecting the classification.

This view was also taken by the board of appraisers at their session at New York in July last, and, in consideration of this concurrence of opinion, the Department decides that the claim of the appellants that the goods are dutiable at the rate of 7 cents per square yard and 40 per cent ad valorem, under T. I., 365, is well founded.

You are therefore authorized to readjust the entries at that rate, and to take measures for refunding the excess of duty exacted thereon. (**8387.**)

TREASURY DEPARTMENT, *September 1, 1887.*

"SLIPED" WOOL.—The Department is in receipt of a letter from the appraiser at your port, dated the 13th ultimo, in which information is asked as to the proper classification of so-called "sliped" wool. As a reply thereto, I inclose herewith copies of communications received from the collector and appraiser at New York, from which it would appear that the wool consists of what is known as "cross-bred lamb's wool," being a cross between English and merino blood, which would be returned for duty at that port as class 2 wool, dutiable, under the provisions of Schedule K., T. I., 358, at the rate of 10 cents per pound.

The appraiser further reports that the process through which the wool has gone, to wit, having been "sliped" from the hide through the agency of lime and other substances, would not advance it beyond the condition of washed wool, and, accordingly, would not affect its return for duty.

These views appear practically to concur with your own, and may be adopted in the classification of this class of wool. (**8414.**)

TREASURY DEPARTMENT, *September 7, 1887.*

CORK SOLES.—The Department is in receipt of your letter of the 29th ultimo, submitting the appeal (4854*p*) of Messrs. Shattuck & Binger from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain cork soles imported by them, per *City of Chester*, September 2, 1886.

The appellants claim that the merchandise is dutiable at the rate of 30 per cent ad valorem, under the provision in T. I., 422, for "corks and cork-bark, manufactured."

An inspection of the sample shows that the articles are manufactured of cork and wool, wool being a leading and important feature, and the Department is of opinion that they were properly classified for duty under the provision in T. I., 362, for "all manufactures of wool of every description, made wholly or in part of wool."

Your assessment of duty thereon is hereby affirmed. (**8423.**)

TREASURY DEPARTMENT, *September 24, 1887.*

"WORSTED MANTLINGS" COMPOSED IN PART OF WOOL.—The Department is in receipt of your letter of the 14th instant, submitting the appeal (5464*p*) of Mr. C. Kell from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain worsted mantlings imported by him, per *Servia*, August 17, 1886, and claimed to be dutiable under T. I., 363.

The appraiser reports that the goods in question are composed of *wool*, worsted, and cotton, and that they were classified for duty under T. I., 362.

In view of the report of the appraiser that the goods are composed in part of wool, and of the fact that goods composed in part of wool are expressly excluded from the provisions of T. I., 363, the claim of the appellant is rejected. (**8414.**)

TREASURY DEPARTMENT, *September 28, 1887.*

WOOL WASTE, CARBONATED.—* * * From the report of the appraiser and an inspection of the samples submitted it appears that the merchandise in question consists of so-called "carbonated wool-waste," made from scoured wool of class 1, that it is nearly as valuable as the wool from which it is made, and is adapted to all the uses of scoured wool.

By reference to the report of the appraisers' conference held at your port in July last, it appears that this article was the subject of consideration at said conference, and that it was held to be properly classified as scoured wool, class 1.

The Department concurs in this view, and your assessment of duty, being in accordance therewith and with T. I., 356 and 357, and the principle enunciated in Department's decision of April 29, 1885 (synopsis 6884), is hereby affirmed. * * * (**8452.**)

TREASURY DEPARTMENT, *October 13, 1887.*

"GARNETTED THREAD WASTE."—The Department is in receipt of your letter of the 6th instant, transmitting the appeal (5904 *p*) of J. W. Tattersfield from your decision assessing duty at the rate of 10 cents per pound on certain worsted waste imported into your port, per *Galileo*, on the 23d of July last, which the appellant claims to be dutiable at the rate of 10 per cent ad valorem under the provisions in Schedule N (T. I., 493) for "waste, all not specially enumerated or provided for."

It appears from the special report of the appraiser and an inspection of the samples that the article in question is the so-called "garnetted thread waste" which was the subject of consideration at the recent conference of United States appraisers at New York, and which was then considered to be in fact *scoured wool*, dutiable at the rate of 30 cents per pound.

It is also understood that the article is similar in many respects to the so-called "carbonated wool waste" which was the subject of Department's ruling of the 28th ultimo, paragraph 9, Circular No. 106, current series.

Under such circumstances you are instructed, provided that the merchandise still remains in your custody, to reclassify it accordingly and to call upon the appellant for payment of the duties still due the Government.

In case, however, the merchandise was entered for consumption and delivered into the custody of the importer at the time of the entry, your classification thereof as wool waste may stand unchanged. (**8474.**)

TREASURY DEPARTMENT, *October 18, 1887.*

SHEEPSKIN RUGS AND MATS.—The Department is in receipt of your letter of the 6th instant, transmitting the appeal (6005 *p*) of Mr. W. F. Laury from your assessment of duty at the rate of 40 per cent ad valorem on one case of sheepskin mats and rugs imported, per *Zealandia*, August 8, last, and returned by the appraiser as rugs not otherwise provided for, dutiable under T. I., 378.

The appellant claims that the merchandise is liable to a duly of 20 per cent only, in accordance with Department's decision of December 29, 1885, on an appeal received from your port.

By reference to the decision cited, it appears that the merchandise covered thereby consisted of dressed goatskins and sheepskins similar to those covered by Department's decisions of July 28, 1885 (Synopsis 7046), August 5, 1885 (synopsis 7063), while the merchandise in question appears, from an inspection of the sample submitted and the report of the appraises at your port, to consist of dried sheepskins, lined and finished complete for use as rugs or mats.

The decisions above referred to were not intended to apply to merchandise of this character, which is plainly covered by the provisions of T. I., 378.

Your assessment of duty is accordingly hereby affirmed. (**8484.**)

TREASURY DEPARTMENT, *October 26, 1887.*

GARNETTED WASTE.—The Department duly received your letter of the 17th instant, transmitting the protest and appeal (6160 *p*) of Messrs. Adler & Co. from your assessment of duty at the rate of 24 cents per pound on five bales of so-called "wool wase" imported by them, per *Circassian* (entry No. 1414), September 23, 1887.

The appraiser at your port reports that the article in question is made of class 1 wool, washed, costing over 30 cents per pound in an unwashed condition.

The appraiser at Philadelphia, to whom a sample of the importation was submitted, returns the same as garnetted wool waste, and that it is the practice at his port to return similar importations as scoured wool, dutiable at 30 cents per pound.

An inspection of the sample shows that the article has been garnetted or put through some process restoring it practically to the condition of unmanufactured wool, which, under the principles contained in Department's decision of September 28, last (synopsis 8452), is dutiable at the wool rate, and not as waste.

Your assessment of duty is accordingly affirmed. **(8499.)**

TREASURY DEPARTMENT, *October 26, 1887.*

SHEEPSKINS WITH THE WOOL ON PARTIALLY TANNED OR TAWED.—The Department is in receipt of your letter of the 19th instant in regard to your practice of classifying, under the existing tariff act, alum tanned or tawed sheepskins with the wool on imported into your port.

These sheepskins, as it is understood, are tanned and finished for the purpose of being used as rugs or for other similar purposes.

In the opinion of the Department they can not be classified under the provision in Schedule N (T. I., 460) for "leather not specially enumerated or provided for in this act," at a duty of 15 per cent ad valorem, as claimed by you, but are liable to duty at the rate of 20 per cent ad valorem, under the further provision in this schedule (T. I., 461) for "skins dressed and finished, of all kinds, not specially enumerated or provided for in this act."

You will conform your practice to the views herein expressed on the importation of such merchandise. **(8502.)**

TREASURY DEPARTMENT, *October 28, 1887.*

TWEED HATS AND TWEED CAPS.—The Department duly received your letter of August 9, last, in regard to a variance at different ports in the classification of tweed hats. In reply, I would call your attention to the Department's decision of April 15, 1884 (synopsis 6299), in which it is held that tweed hats are dutiable at the rate of 30 per cent ad valorem, under T. I., 400.

Tweed *caps* are dutiable as "wearing apparel," under T. I., 366, and the Department's decision of November 20, 1885 (synopsis 7214). **(8506.)**

TREASURY DEPARTMENT, *November 8, 1887.*

WOOL GREASE—DUTIABLE AS AN EXPRESSED OIL.—* * * The appellants claim that the article (wool grease) is provided for under "Schedule N (sundries), act of March 3, 1886, where it says grease obtained by pressure from wool skins, 10 per cent."

So far as the Department is aware, there is no act of March 3, 1886, of the character referred to, neither is there any provision in the tariff act of March 3, 1883, for "grease obtained from pressure of wool skins." The claim, therefore, in theparticular mentioned must be rejected.

The appraiser reports that the merchandise in question is an expressed oil of wool, and is known as a solid fat oil of animal origin, it being so classified in the United States Dispensatory (edition 1886, folio 978).

Such being the case, it is held that the article is dutiable at the rate of 25 per cent ad valorem, under the provision in Schedule A (T. I., 92) for "all preparations known as expressed * * * oils." **(8528.)**

TREASURY DEPARTMENT, *November 23, 1887.*

LINSEED-OIL BAGGING OR PRESS CLOTH.—Concerning the appeal from your decision assessing duty on certain so-called "linseed-oil bagging," you are informed that after a further and more careful investigation of the matter, it is ascertained that the merchandise in question is neither commercially known as bagging nor capable of being used for the same purpose as bagging, but that it is commercially known and sold as "press cloth," and is used by candle manufacturers, chemists, and oil manufacturers in hydraulic presses for filtering purposes, expressing oil, etc.

Such being the case, you are informed that Department's said decision of the 17th ultimo (synopsis 8480), which was based upon an erroneous statement of facts, is hereby revoked, and that such merchandise, which is imported as fabrics composed sometimes wholly of camel's hair, and at other times wholly or in part of wool, worsted, etc., should be classified, under the proper provisions of Schedule K, either as manufactures of hair, or manufactures in part of wool, worsted, etc., at the rates of duty therein prescribed. * * * **(8550.)**

TREASURY DEPARTMENT, *December 19, 1887.*

INGRAIN CARPETS WOVEN IN SQUARES.—The Department is in receipt of your letter of the 15th instant reporting on the communication of Messrs. Arnold, Constable & Co., dated the 3d instant, regarding the classification under the tariff acts of two-ply ingrain carpets when woven in squares.

You state that Schedule K (T. I., 369) provides for "Aubusson, Axminster, and chenille carpets, and carpets woven whole for rooms," and that, in your opinion, as there is only a comma and not a semicolon after the first word "carpets," the provision for "carpets woven whole for rooms" applies only to such as are "Aubusson, Axminster, and chenille," or, in other words, that a proper reading of the law is "Aubusson, Axminster, and chenille carpets" *and* Aubusson, Axminster, and chenille carpets "woven whole for rooms."

You also express the opinion that two-ply ingrain carpets are specially provided for in the same schedule (T. I., 375) at 8 cents per square yard, and, in addition, 30 per cent ad valorem, and that such rate applies to all two-ply ingrain carpets, whether in ordinary lengths or woven square or otherwise.

Your views in the matter seem to be in accordance with Department's ruling of April 21, 1886 (synopsis 7474), wherein it was held that certain "Weardale carpets and crumb cloths," intended to be placed over carpets for their protection, are not dutiable as "carpets woven whole for rooms," but are dutiable as two-ply ingrain carpets.

It is understood that it has been the practice at your port for many years to classify the two-ply ingrain carpets above mentioned in accordance with your views, and no reason is perceived for changing such practice. **(8588.)**

TREASURRY DEPARTMENT, *February 16, 1888.*

WOOLEN "CROISÉ" OR "SHOODA."—The Department duly received your letter of December 22 last, submitting the appeal (251*r*) of Messrs. Kohn Bros., Bine & Co. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain woolen dress goods imported by them into your port, entry No. 7504, December 8, 1887, and claimed to be dutiable at the rate of 35 cents per pound and 35 per cent ad valorem, as "woolen cloths," under T. I., 362.

The appraiser reports that the goods in question are commercially known as wool croisé or shooda; that they bear no resemblance to what is known as "wool cloth" or "ladies cloth;" that they are almost exclusively used for ladies' and children's dresses, and that they were classified for duty under T. I., 365.

The sample submitted has been referred to the appraisers at Philadelphia and Boston, who report that goods of the same character are classified at those ports for duty at the rate assessed, under the provision in T. I., 365, for "women's and children's dress-goods."

The Department decides that the goods were correctly classified, and your assessment of duty thereon is hereby affirmed. (**8679.**)

TREASURY DEPARTMENT, *February 18, 1888.*

BRUSH BAGS COMPOSED OF JUTE, METAL, AND WORSTED.—The Department is in receipt of your letter of the 7th instant, transmitting the appeal (2922*r*) of Messrs. Ives, Bellamy & Co. from your assessment of duty at the rate of 18 cents per pound and 35 per cent ad valorem on certain brush bags imported by them, per *Scythia*, October 29, 1887.

From your reference to Department's letter of the 19th ultimo, it would appear that the articles in question are similar to those referred to therein, which were described as being composed of jute, embroidered with worsted yarns, the bags being suspended by an ornamental metal frame, the frame constituting 45 per cent of the total value of the material.

By that decision it was held that two classifications were applicable to these bags, to wit, 45 per cent, as manufactures in part of metal, under T. I., 216, and the several rates provided for in T. I., 363, for manufactures in part of worsted, and you were directed to liquidate the entry at the higher of the two rates applicable under section 2499.

By your assessment of duty in this case at the rate applicable to manufactures of worsted, it is understood that such rate is the higher, and your action being, therefore, in accordance with said decision and with the rule laid down in Department's decision of March 22, 1887 (synopsis 8126), is hereby affirmed. (**8682.**)

TREASURY DEPARTMENT, *March 2, 1888.*

TRAVELING OR CARRIAGE RUGS.—I return this day, under another cover, three samples of traveling or carriage rugs, received with your letter of the 30th of January last, reporting further in the matter of the appeal (226*p*) of John Wanamaker from your assessment of duty at the several rates provided for wool and worsted goods on an importation of similar articles by him, per *British Prince*, November 18, 1887.

After a careful consideration of the question of fact involved in said appeal, and the receipt of reports thereon from the collector and appraiser at New York, the Department has concluded to modify the decision of January 18, 1870 (synopsis 543*a*), which appears to be applicable to this class of importations, and to concede the claim of the appellant that these rugs are dutiable under the provision in Schedule K (T. I., 378) for "all other * * * rugs."

In the report of the appraiser at your port, received with your letter aforesaid, he describes the articles as such as are used for carriage and sleigh robes, for wrapping on railway cars as traveling robes or blankets, and for house purposes for coverings for sofas, etc.; and, in his letter of December 14 last, reporting on the same appeal, he submits that, under the comprehensive signification of the word, they are *rugs*.

The appraiser at New York reports that they are commercially known as traveling or carriage rugs; and Webster, in his definition of rugs, states that "they are

---

a Certain (so-styled) "railway rugs," composed of cows' hair and cotton, or calves' hair and cotton, were decided not to be the "rugs" mentioned in the act of March 2, 1867. They should be classified according to the materials of which they are composed, to be determined by the appraiser, on examination of the goods and such evidence as may be presented (synopsis 543, January 18, 1870).

used for various purposes, as coverings for beds, protecting the carpet before fireplaces, and for protecting the legs against the cold in riding, as a railway rug."

In Department's decision of January 4, 1886 (synopsis 7298), these articles were described as traveling rugs, and were held not to be dutiable as blankets.

As the Department has heretofore practically decided (see synopses 7565 and 8162) that the term "screens," found in the same paragraph, applies to all articles commercially known as screens, and as it is satisfied that these articles are now, and were at the time of the passage of the act of March 3, commercially known as rugs, the decision first aforesaid (synopsis 543) will, in accordance with an opinion of the Attorney-General received in this case, be modified accordingly. The entry in the present instance may, therefore, be reliquidated at the rate applicable to rugs under T. I., 378, and the necessary steps taken for refunding the excess of duty exacted. **(8702.)**

TREASURY DEPARTMENT, *March 15, 1888.*

WASTE, WOOLEN OR WORSTED.—The Department is in receipt of letters dated the 5th and 7th instant, respectively, from the United States attorney at Philadelphia, in which he reports the trials of the cases (No. 8) of The United States against George W. Patton *et al.* and (Nos. 9 and 10) of The United States against John Dobson *et al.*, which resulted in judgments in favor of the defendants.

These suits were brought in the United States district court for the eastern district of Pennsylvania for the recovery of additional duties claimed to be due the United States on certain importations of so-called "woolen" or "worsted" waste, which had been entered by the defendants at the time of importation as "woolen waste," under the provision in Schedule K (T. I., 361), at a duty of 10 cents per pound, but which was classified by the collector of customs as "scoured" wool, at a duty of 30 cents per pound, the claim of the United States being that the defendants were liable for the difference in duties between the said rates.

The main question involved was whether the merchandise, which consisted of broken tops, laps, rovings, slubbings, etc., known as thread-waste, carbonated waste, woolen waste, worsted waste, etc., was commercially known as "woolen waste" at the time of the passage of the act of March 3, 1883, and on this point the United States attorney reports that the evidence produced by the plaintiffs was to the effect that it was commercially known as "worsted waste," and that the evidence adduced by the defendants tended to show that it was commercially known as "woolen waste," whereupon the judge charged the jury that whether the article was "woolen or worsted waste, the consequences are the same so far as concerns this case; that the provisions of the statute whereby woolen waste is made liable to duty apply as well to this wool waste, whether it be waste arising from the manufacture of worsted or woolen goods."

The United States attorney further reports that the jury, in accordance with such charge, found verdicts in favor of the defendants, thus sustaining their claim that said merchandise is liable to duty at the rate prescribed by said schedule for "woolen waste," and also that, in his opinion, the verdicts were correct and in accordance with the evidence.

Upon submitting the matter to the United States Attorney-General, that officer advises "that no appeal or writ of error will be taken by the United States, as there is no sufficient reason to believe that any error was committed against the Government."

You will therefore be governed accordingly, and reliquidate the entries covered by the suit first mentioned in accordance with such decision. You will also apply this decision to any other similar suits now pending at your port, and to all similar importations where the requirements of law as to protest, appeal, institution of suit, etc., have been fully complied with. Hereafter importations of merchandise which

may be commercially known as woolen or worsted waste should also be classified in accordance with such decision.

It is understood that the importations which were the subject of the two suits last mentioned (those against Dobson) were made at New York, and that the additional duties sued for were assessed at that port. Instructions as to the settlement of those suits will be accordingly forwarded to the collector of customs at New York. **(8731.)**

TREASURY DEPARTMENT, *April 20, 1888.*

WOOLEN AND WORSTED WASTE.—In reply to your letter of the 17th instant, you are informed that Department's rulings of the 15th ultimo, carrying out the decision of the court concerning "woolen or worsted waste," which is the one to which it is presumed you call attention (copy herewith inclosed), relates to waste which was commercially known as "woolen waste" at the time of the passage of the act of March 3, 1883, and that such decision does not cover any commodity which might be now manufactured from wool for the purpose of being introduced into the United States under the name of "waste." **(8793.)**

TREASURY DEPARTMENT, *May 24, 1888.*

WOOLEN CLOTH KNOWN AS COFFIN-CLOTH NOT DUTIABLE AS DRESS-GOODS.—The Department is in receipt of your letter of the 24th of February last, transmitting the appeal (4213 *r*) of Mr. F. Brettschneider from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain so-called women's and children's dress goods imported by the appellant, per *Weiland*, November 15, 1887, and claimed by him to be dutiable at 5 cents per square yard and 35 per cent ad valorem, under T. I., 365.

It appears that the merchandise in question is cloth too heavy for women's and children's dress goods, but intended for manufacture into shrouds for men, women, and children, and that it is a wool cloth with a cotton warp, and commercially known as "coffin cloth." It is dutiable at the rate assessed, under T. I., 362. **(8860.)**

TREASURY DEPARTMENT, *July 16, 1888.*

CHURCH-SEATING NOT DUTIABLE AS HEMP CARPETING.—The Department is in receipt of your letter of the 21st ultimo, submitting the appeal (5263 *s*) of Rev. H. Martin Hart from your assessment of duty at the rate of 40 per cent ad valorem on certain "church-seating" imported by him at your port, and claimed to be dutiable as "hemp carpeting," under T. I., 377.

The merchandise in question, which is intended for use as mats or cushions for the seats in the cathedral at Denver, is composed of hemp and wool, and, as wool appears to be a substantial component, it is not, under the Department's decision of May 29, 1886 (synopsis 7548), entitled to entry as hemp carpeting.

The claim of the appellant is therefore rejected. * * * **(8944.)**

TREASURY DEPARTMENT, *July 19, 1888.*

WOOLS, TURKISH, ESKISSAR, AND ROUMANIAN.—The Department is in receipt of your letter of the 30th ultimo, further reporting on the appeal (1202 *s*) of Messrs. Samuel Bunting's Sons & Co., from your decision assessing duty at the rate of 10 cents per pound on certain wools imported into your port, per the *Chicago* and *Germanic*,

October 14, 1887, which the appellants claim to be dutiable at the rate of 2½ cents per pound, under the provision in Schedule K for third-class wools.

It appears from the special reports of the appraiser, transmitted by you in connection with the said appeal, that the wools in question consisted of unwashed Turkish, Eskissar, and Roumanian wools, which, upon careful examination, were found to contain a considerable percentage of Merino blood, and that they were therefore returned for classification as wools of the first class, at a duty of 10 per cent.

The question as to the correctness of such classification was submitted to the conference of New York appraisers, now being held at your port, and the Department is in receipt of a communication from the Board, dated the 16th instant, from which it appears that the members are unanimous in the opinion that the said wools were properly classified as wools of the first class, dutiable at the rate of 10 cents per pound, under the provisions of Schedule K, T. I., 357.

Your decision is therefore affirmed. (**8956.**)

TREASURY DEPARTMENT, *August 18, 1888.*

"CHEVIOTS."—Your letter of May 29 last was duly received, submitting the appeal (3645 *s*) of Messrs. H. Bernheimer, Son & Co., from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain so-called worsted cloths imported by them, per *Celtic*, December 3, 1887, and claimed to be dutiable as manufactures of worsted, under the provisions of T. I., 363, according to their value per pound.

The appraiser reports that the goods, which are known as cheviots, are composed wholly of wool, and were therefore returned for duty as manufactures of wool, under T. I., 362.

Your assessment of duty thereon is hereby affirmed. * * * (**8986.**)

TREASURY DEPARTMENT, *September 5, 1888.*

WOOL BLANKETING.—The Department is in receipt of your letter of the 3d ultimo transmitting the appeals (7138*s* and 7139*s*) of Messrs. Stone & Downer from your assessment of duty at the rate of 35 cents per pound and 35 per cent ad valorem on certain so-called "wool blanketing" imported by the appellants, per *Samaria* and *Catalonia*, June 20 and July 10, 1888, and claimed by them to be dutiable either at 18 cents per pound and 35 per cent ad valorem, as woolen blanketing, under T. I., 363, or at 20 cents per pound and 30 per cent ad valorem, as endless belts or felts for paper or printing machines, and returned as nonenumerated manufacture in part of wool, under T. I., 362.

It is understood that the so-called "blanketing" in question is composed in part of wool, is imported for the express purpose of being manufactured into card-cloth, does not assimilate to the flannels and blankets provided for in T. I., 363, and is not used for the same purposes as are endless belts and felts.

Said goods, being in part of wool, are excluded from classification under T. I., 363, and, not being otherwise provided for, are dutiable under T. I., 362, in accordance with Department's decisions of March 10, 1886 (synopsis 7402), April 22, 1887 (synopsis 8188), June 2, 1888 (synopsis 8874), and July 12, 1888 (unprinted), on a like appeal of the same importers.

Your assessment of duty thereon is hereby affirmed. (**9012.**)

TREASURY DEPARTMENT, *September 10, 1888.*

WOOL-BACK WORSTED COATINGS.—The Department is in receipt of your letter of the 25th ultimo, submitting the appeal (8442*s*) of Messrs E. Oelbermann & Co., from

your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain manufactures of wool imported by them per *Waesland*, May 21, *Schiedam*, May 24, and *Westernland*, May 12, 1886.

The appraiser reports that the goods in question are commercially known as "wool-back" worsted coatings, and are composed of wool and worsted, and that they were classified under T. I., 362.

* * * * * * *

The goods, being composed in part of wool, are expressly excluded from classification under T. I., 363, as claimed by the appellants.

Your assessment of duty is hereby affirmed. **(9018.)**

TREASURY DEPARTMENT, *November 23, 1888.*

WOOLEN PIANO AND TABLE COVERS.—The Department is in receipt of your letter of the 19th ultimo, submitting the appeal (2487*t*) of Messrs. F. Victor & Achelis, from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem, on certain woolen piano and table covers, imported by them per *Lahn*, March 12, 1888.

The appellants claim that the covers in question are entitled to entry at the rate of 40 per cent ad valorem under T. I., 378.

The paragraph in said provision of law reads as follows, viz: "Mats, rugs, screens, covers, hassocks, bedsides, and other portions of carpets or carpetings, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description," and as said piano or table covers are not portions of carpets or carpetings, this provision is manifestly inapplicable to them.

The covers in question were properly dutiable at the rate assessed under the provision in T. I., 362, for "all manufactures of wool of every description or, made wholly or in part of wool," and your assessment of duty thereon is hereby affirmed. **(9133.)**

TREASURY DEPARTMENT, *January 22, 1889.*

COAT LININGS.—The Department is in receipt of your letter of the 15th ultimo, reporting further on the appeal (8965*s*) of Messrs. H. H. Schwietering & Co. from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem on certain coat linings (so called), imported by them per *Trave*, April 28, 1888, and claimed to be dutiable at the rate of 7 cents per square yard and 40 per cent ad valorem, under the provision for "coat linings * * * composed in part of wool worsted, the hair of the alpaca, goat, or other animal."

The appraiser at your port reports that the goods in question are a manufacture of worsted, which is used for the same purpose as light-weight cassimeres sometimes are, viz, for lining overcoats; that it could be used also in the manufacture of *negligé* shirts, and that it was returned for duty as a "manufacture * * * composed wholly or in part of worsted."

The appraiser at Boston, to whom a sample was referred, reports that the goods are in fact coat linings, being manufactured expressly for that purpose, and imported and dealt in by tailoring firms, or those dealing in tailors' trimmings, and that any use other than for coat linings to which they might be put would be quite exceptional.

The appraiser at Philadelphia also reports that these goods are commercially known and chiefly used as coat linings, and that they are so classified at that port.

From an inspection of the sample submitted, and in view of these reports, the Department decides that the goods are dutiable as coat linings, under T. I., 365, and you are authorized to readjust the entry in question accordingly, and also the entries of similar goods covered by the appeals specified in the annexed schedule, and to take measures for refunding the excess of duty. **(9206.)**

TREASURY DEPARTMENT, *January 28, 1889.*

NOILS.—The Department is in receipt of a letter dated the 15th instant, from Special Agent Legare Phenix, in relation to the classification of wool noils at your port, more especially those imported by the firm of Seed & Denby, which are consigned to said firm by Messrs. Bowes Bros., of Liverpool.

The special agent states that there is a great diversity of opinion at your port, Boston, and Philadelphia, as to whether the merchandise consists of noils taken from first, second, or third class wool, and he suggests that, inasmuch as the noils are usually invoiced and entered simply either as "third-class" or "carpet noils," that the consignees be required to specify in their entries the actual character of the noils, so as to show from what wool they are made, that is, whether from Egyptian, Turkish, Persian, English, or what.

The suggestion of the special agent seems to be a good one, and you are requested, if practicable, to carry it into effect. (**9221.**)

TREASURY DEPARTMENT, *February 23, 1889.*

WOOL—SCOURED WOOL-TOPS.—The Department is in receipt of a letter dated the 13th instant, from the U. S. attorney for the southern district of New York, reporting the trial, on the 5th and 6th instant, before Judge Lacombe and a jury, of the case of A. D. Juilliard *et al. v.* Magone, collector (N. S. 11320), in the U. S. circuit court for his district.

The case involved the classification of three cases of scoured wool-tops imported by said firm from Bradford via Liverpool, and which were classified as scoured wool of the second class, imported in other than the ordinary condition of scoured wool, and dutiable under T. I., 356, etc., at the rate of 60 cents per pound.

The plaintiffs claimed that the merchandise was scoured wool of the second class, valued at less than 30 cents per pound at port of shipment, and hence dutiable at the rate only of 30 cents per pound under T. I., 356 and 357.

The specific question was submitted to the jury whether, upon the evidence submitted, the merchandise was wool imported in any other than ordinary condition, as practiced in 1883 and prior thereto, and the jury answered said question in the affirmative, whereupon the court directed a verdict for the defendant.

It will be seen that the finding of the jury in this case is in keeping with the decision heretofore made by the Department on wool-tops (see Synopses 4777 and 7217), under which it is understood duty is now assessed on similar importations.

The United States attorney reports that, after the rendition of the verdict in the above case, he was informed by the plaintiffs that they were thoroughly satisfied with the trial of the case as a test, and should not appeal from the decision thereof.

The decisions of the Department being thus sustained, the practice thereunder as to the classification of wool tops will be continued as heretofore. (**9261.**)

TREASURY DEPARTMENT, *March 9, 1889.*

VALUE OF WOOL AT FOREIGN PORT OF SHIPMENT.—I return herewith the inclosures of your letter of the 18th ultimo, in which you request instructions as to the proper method of obtaining the per-pound value of wool of class 3, which is returned by the weigher at weights less than those stated in the invoice and entry, and you refer to a paragraph in Department's decision of August 10, 1887 (Synopsis 8380), which seems to you to conflict with article 491 of the regulations.

In reply to your inquiries you are informed that the paragraph in Department's decision of August 10, 1887 (Synopsis 8380), to which you refer is not deemed to be in conflict with article 491 of the Regulations. This article provides that when the actual market value of wool at the last place of shipment to the United States,

exclusive of charges in such port, shall have been ascertained, no further inquiry is necessary to ascertain the value for the purpose of fixing the rate of duty to which the merchandise is liable, and is based upon a circular letter issued by the Department January 22, 1884.

The actual market value of the wool at the place of shipment is to be ascertained by the appraiser, under the direction of the collector pursuant to the authority given him for that purpose under section 2906, that section being modified in the case of wool by the provision of the tariff act of 1883, which substitutes "the last port or place whence exported to the United States" for the "principal markets of the country, from which the importation has been made," and subject also to the further limitation contained in section 2900, that duty shall not be assessed upon an amount less than the invoice or entered value, this limitation applying in cases where the rate of duty depends upon the ascertained value of the merchandise, per pound, per yard, etc.

It would, therefore, seem to be the duty of the appraiser, in all cases, in the first instance, to ascertain the value of an importation of wool at the last port or place whence exported to the United States, excluding charges in such port. In no case, however, is he permitted to fix such value at a less sum per pound than that contained in the invoice and entry.

It would appear from your communication that the difficulty arises in those cases where there is a discrepancy between the weight of the wool as invoiced and the actual weight as found by the United States weigher at the custom-house. In most cases the actual price paid for the wool, per pound, would be correctly represented by dividing the total amount paid for the importation (less charges) by the number of pounds returned by the United States weigher, and if the appraiser is satisfied that this result correctly exhibits the value of the wool, per pound, at the place whence exported to the United States, excluding charges in such port, he may certify and return the same accordingly to the collector for classification and assessment of duty. **(9281.)**

TREASURY DEPARTMENT, *March 22, 1889.*

WOOL—BROKEN TOPS.—The Department is in receipt of the appeals, hereinafter mentioned, from your decision assessing duty at the rate of 60 cents per pound on certain so-called "worsted waste" imported by the parties named, which the respective appellants claim to be dutiable at the rate of 10 cents per pound, under the provision in Schedule K (paragraph 361) for "woolen * * * waste," but which merchandise was returned by the United States appraiser as "scoured broken wool tops," etc., on classes 1 and 2, costing under 30 cents per pound in the unwashed condition.

Upon investigation, the claim of the appellants appear to have no foundation in fact. The merchandise, as the special reports of the United States appraising officers and an inspection of official samples show, is not woolen waste within the proper meaning of that term as used in the tariff acts (paragraph 361) where it occurs in connection with "rags," "shoddy," "mungo," and "flocks," and which term has been heretofore defined by the Department (Synopsis 5820)(*a*) to apply only to a refuse material resulting from the various processes of woolen manufacture, or, as Worcester defines the word to mean, "something of little or no account or value, as the refuse of cotton or silk," but is in fact a fine quality of scoured and purified wool, of classes 1 and 2 in the form either wholly of broken tops or with broken tops predominating to the extent of at least 70 per cent, which, as proofs submitted to the Department seem to indicate, have been purposely broken with a view to procuring its illegal admission as "waste."

---

a See note to 6884.

Scoured wool, imported in the form of top or tops, similar to the merchandise in question, can not be removed from its proper classification under the statute and the decisions of the courts (see Synopsis 9261) either by reason of the tops being broken purposely or otherwise, or on account of a small percentage of thread, or other waste being mixed with it, and as it is clear to my mind that the said merchandise is in fact wool advanced beyond the scoured condition and suitable for immediate use, and is, therefore, wool imported in other than the ordinary condition in which wools were imported at the time of the passage of the act of March 3, 1883, I decide that it is dutiable at twice the rate of duty prescribed for scoured wools of the classes to which it belongs, under said Schedule K (paragraph 356). which, among other things prescribes that "the duty upon wool of the sheep * * *, which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject."

Your decision is therefore affirmed. * * * **(9303.)**

TREASURY DEPARTMENT, *April 22, 1889.*

WEIGHT OF WOOLEN AND WORSTED GOODS.—The Department is in receipt of your letter of the 6th instant, reporting further on the appeal (2079 *v*) of Messrs. Neustadter Brothers from your assessment of duty at the rate of 35 cents per pound and 40 per cent ad valorem, on certain wool flannel imported by them per *Servia*, February 20, 1888, and claimed to be dutiable at the rate of 24 cents per pound and 35 per cent ad valorem.

The appellants claim that the weight of the goods as taken by the appraiser who averaged the boards at the weight of one board is incorrect, and that the invoice presented shows the exact net weight of the goods sworn to by the manufacturer before the United States consul.

The appraiser reports that the weight of the boards was ascertained by weighing one board and multiplying the result by the number of pieces.

The Department being of opinion that this method of ascertaining the amount of allowance to be made for the weight of boards upon which flannels and other woolen and worsted goods are rolled was inadequate, the question was submitted to the board of local appraisers in conference at your port, and from the report of the recorder of said board, dated the 13th instant, it appears that the practice at the different ports varies, and the appraisers unanimously recommend the adoption of the method of weighing one board out of every ten, to ascertain their average weight.

This recommendation is approved, and you will please direct the appraiser to adopt this method in ascertaining the weights of all woolen and worsted goods where the rate or amount of duty is dependent on the weight of the goods.

As the goods covered by the appeal of Messrs. Neustadter Brothers were entered for consumption, and it is now impracticable to ascertain their actual weight, the Department can afford them no relief, and your assessment of duty thereon must stand affirmed. **(9346.)**

TREASURY DEPARTMENT, *May 27, 1889.*

WORSTED CLOTHS.—The Department duly received your letter of the 17th instant, transmitting the appeal (No. 6682 *v*) of Messrs. H. Herrman, Sternbach & Co. from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, on certain merchandise imported by them per *Adriatic*, April 8, 1889.

The appellants, in their protest, claim that the goods in question "are manufactures of worsted and contain no wool, and as such, costing under 60 cents per pound,

are liable to a duty of only 18 cents per pound and 35 per cent ad valorem," under Schedule K (T. I., new, 363), act of March 3, 1883.

It appears from the samples submitted that these cloths are what are popularly known as coatings, suitings, etc., and are so finished and close as to be specially adapted for use in the manufacture of garments worn by men and boys. With the papers transmitted is the report of the chemist at the United States laboratory at New York, to the effect that samples of the cloth have been chemically and microscopically examined by him and "found to be composed wholly of wool fibers."

The assistant appraiser in his report, which is concurred in by the appraiser, states "that the merchandise covered by the invoices in question, consisted of cloth composed wholly of wool, and therefore dutiable under the provisions of paragraph 362, T. I., new, as a manufacture of wool, valued at less than 80 cents per pound, at the rate of 35 cents per pound and 35 per cent ad valorem."

This view accords with the unanimous conclusion reached by the local appraisers of the principal ports at their conference held in New York, in April last, "that the so-called worsted coatings, suitings, etc., were manufactured of wool, and should be returned as property dutiable according to value under the provisions in 362, T. I., for all manufactures of wool of every description made wholly or in part of wool not specially enumerated or provided for."

The question involved thus becomes one of fact, and the proper customs officers, upon whom the law has conferred jurisdiction in the first instance to examine and certify as to the facts, having found and decided that these goods are "woolen cloths" and "manufactures of wool" within the meaning of those terms as used in the tariff act, their decision in this respect ought not be disturbed, unless it clearly appears that they have misapprehended the facts, or reached a conclusion unsupported by them. The question in the form presented by this appeal comes here for the first time, and is unembarrassed by any previous Departmental ruling upon it. After careful research, I am unable to find any decision of the Department which can serve as a precedent for the disposition of this case. It does, however, appear from the files of the Department that at least three times during the past four years application has been made in behalf of the domestic manufactures of woolen cloths to the Secretary of the Treasury for instructions to the collectors of customs at the several ports of entry, to classify and assess duty upon importations of goods of this character under paragraph 362, as woolen cloths or manufactures of wool, it being represented that they were erroneously classified under paragraph 363, and elaborate arguments were presented in support of this proposition, but no decision upon the subject was ever announced by the Department.

It is claimed in support of the contention that these cloths are manufactures composed wholly of worsted, and not specially enumerated or provided for in the tariff act; that the wool which is used in their manufacture has been combed as well as carded, and that whenever wool in the process of its manufacture into yarn is combed, the product is invariably a substance or material known as "worsted," and that when this substance or material is wholly employed in the manufacture of cloth the result is a manufacture "composed wholly of worsted" not specially provided for, and therefore dutiable at the lower rate prescribed in paragraph 363. It is claimed that this conclusion inevitably follows, without reference to the kind or quality of wool used, or the uses and purposes for which the manufactured article may be intended or adapted.

But it is conceded that the wool now commonly used in the manufacture of the goods which are the subject of this appeal is not of the kind known as "combing wool" designated as class two (paragraph 354) in the tariff act; but is a fine "clothing wool" belonging to class one (paragraph 353). It is further shown that it is only within recent years that these cloths have been known to commerce, the use of improved machinery having made it practicable to manufacture them from the fine clothing wool which has been subjected to the process of combing after it has been carded.

It seems to be undisputed that the definition of "worsted" was originally confined to the product of long-combing wools. Webster, in the latest edition, described the term as follows: "Worsted, well-twisted yarn, spun of *long staple wool* which has been combed to lay the fibers parallel, *used for carpets, hosiery, gloves, and the like.*"

It therefore becomes important to determine the sense in which the term is used in the tariff act; whether according to its original and proper meaning, or whether it is to have a broader application and to be so construed as to include a large and important class of fabrics which were not within its scope when the term was first employed in our revenue laws.

In all cases of ambiguity, or of conflicting statutory provisions, the familiar rule of construction requires that the intent of Congress should, if possible, be discovered, and such a view adopted as will harmonize and not destroy the manifest scheme of the statute.

In the present case there are two paragraphs under which it is contended the goods in question may be classified: 1. Paragraph 362: "Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not otherwise enumerated or provided for in this act," etc. 2. Paragraph 363: "Flannels, blankets, etc., woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals, except such as are composed in part of wool, not specially enumerated or provided for in this act, valued," etc.

If paragraph 362 stood alone it would not be disputed that worsted cloths were dutiable thereunder, either under the specific designation of woolen cloths, or under the designation of all manufactures of wool of every description, worsted itself being a manufactured fabric or material made from wool either wholly or in part.

After a careful examination and consideration of all the papers and authorities bearing upon the question, I have reached the conclusion that there is nothing in the language employed in paragraph 363 which exempts these cloths from the operation of the provisions of the preceding paragraph.

The term "woolen cloths," in paragraph 362, is a specific designation of a class which was, I think, intended to include all *cloths* made from wool.

The term "cloths" has a technical and restricted signification, and can properly be only applied to the thicker and heavier fabrics of wool, which are so finished and close as to be adapted for use by the tailor or clothier in the manufacture of garments for men and boys.

It appears that these so-called "worsted cloths" are made from clothing wool in the same mills in which other cloths are made, and by the same machinery; that the wool is carded as well as combed, and that they differ in no essential respect in the process of manufacture from other woolen cloths, except that while in the latter case the wool is simply carded, in the former it is both carded and combed; and they are both adapted to the same uses. They are also classed with woolen cloths by many expert authorities upon the subject. In the report of the judges at the Centennial Exposition, consisting of five American and ten foreign experts, they are reported upon under class 235, which comprises the woolen cloths, and not under class 238, which comprises the worsted and combed wool fabrics.

The same classification is followed by the American commissioner at the Paris Exposition of 1878, where they are reported upon under class 33, cloth and other woolen fabrics, and not under class 32, which pertains to combed wool and worsted fabrics.

A noted writer, Mr. Alcan, in his treatise on woolen manufactures, published in 1866, described worsted fabrics as follows:

We rank in the sixth class those innumerable articles whose wool is mixed with cotton, flax, silk, the hair of the goat and alpaca, cashmere, etc., to obtain the vast branch of products known under the name of orleans, coburghs, alpacas, bereges, lastings, gauze, grenadines, mozambiques, foulards, tissues, for furniture, etc., and which are designated more particularly under the *generic name of worsted in England.*

There being a special enumeration or provision in the tariff act, to wit: Woolen cloths, under which these goods may be classified, it follows that paragraph 363 has no application to them, because it includes only such manufactures of worsted as are not specially enumerated or provided for.

In the case of Barber *v.* Schell (107 U. S., 617), it was held that designations qualified by the word "cotton," in the act of 1846, were designations of articles by special description as contradistinguished from designations by a commercial name or a name of trade, and are designations of quality and material; and applying the same principle to the term "woolen" as a designation of cloths, it must be held that it includes all cloths made of wool, and that commercial usage can not be resorted to for the purpose of showing that in the trade the term is restricted to those cloths which were manufactured from wool which had been carded and not combed.

A review of the various tariff enactments upon the subject from 1816 to the present time leads to the conclusion that the term "manufactures ot worsted" in paragraph 363 was intended to include only those fabrics not specially enumerated or provided for which are made from the long staple or combing wools described in paragraph 354. In all the tariff laws the term seems to have been used as synonymous with that of "stuff goods," which, being of a cheaper quality, were always subjected to a lower rate of duty than woolen cloths and manufactures of wool generally.

The first tariff on woolen goods is found in the act of 1816, where an ad valorem duty of 25 per cent was laid on "woolen manufactures of all descriptions, or of which wool is the material of chief valüe, except blankets, woolen rugs, and worsted or stuff goods."

Two things here are worthy to be observed. First, that the term "worsted goods" is used in this act as synonymous with "stuff goods;" and, second, worsted goods are described as "woolen manufactures."

In the tariff act of 1824 a duty was first imposed upon "worsted-stuff goods," and they were classed under the head of "manufactures of wool or of which wool shall be a component part."

The same classification was preserved in the act of 1828.

The act of 1832 imposed a duty of 5 per cent ad valorem on "all milled and fulled cloths known by the name of plains, kerseys, or kendal cottons, composed exclusively of wool, not exceeding 35 cents a square yard in value," and 10 per cent on "worsted-stuff goods, shawls, and other manufactures of silk and worsted," and on "all other manufactures of wool" 50 per cent ad valorem.

Under this statute worsted cloths would have been dutiable at the same rate as other manufactures of wool. It is also to be observed that the term "worsted-stuff goods" is retained, to which is added "shawls and other manufactures of silk and worsted."

In the tariff act of 1842 "worsted-stuff goods" are again recognized as a manufacture of wool, and are excepted from the provision imposing the high rate of duty, and are included under the designation of "all manufactures, not otherwise specified, of combed wool or worsted, and manufactures of worsted and silk combined."

In the succeeding act of 1846 a duty of 30 per cent ad valorem was imposed upon "manufactures of wool, or of which wool shall be a component material of chief value, not otherwise provided for," and 25 per cent upon "manufactures of worsted or of which worsted shall be a component material not otherwise provided for."

The word worsted does not occur in the tariff act of 1857.

In the subsequent tariff acts of 1861 and 1862, worsteds are mentioned in connection with dress delaines and goods of similar description and bunting, as follows: "And all other manufactures of worsted or of which worsted shall be a component material not otherwise provided for," the connection showing that worsteds were considered as varieties of "stuff goods."

The act of 1862 is the first act in which woolen cloths are specifically mentioned,

and it will be observed that the heavier worsted goods were made to pay the same rate of duty as woolen cloths.

In the act of 1864 there is found, after a reference to bunting, the following: "And on all other manufactures of worsted, mohair, alpaca, or goats' hair, or of which worsted, mohair, alpaca, or goats' hair shall be a component material not otherwise provided for, 50 per cent ad valorem."

The tariff act of 1867 is substantially the same in respect to worsteds as the act of 1883, except instead of the phrase "not otherwise provided for," in the act of 1867 there is inserted in both paragraphs the phrase "not specially enumerated or provided for in this act."

All these statutes clearly had in view the manufactures from long-combing wools, including the varieties of stuff goods designated by the names referred to by Mr. Alcan and the other authorities.

In a statute words are to be construed with reference to the company which they keep; and when the term "manufactures of worsted" is found invariably associated with the cheaper worsted fabrics, known as "stuff goods," and the terms are sometimes used interchangeably, the presumption can, I think, be fairly indulged that Congress intended to employ the term in its original and restricted signification.

The case of Elliott *v.* Swartout (10 Peters, 137) is relied upon to sustain the claim that these coatings and suitings are manufactures of worsteds, and hence are dutiable at the lower rate; but I do not consider the case fairly susceptible of such an application. The precise point involved was whether certain worsted shawls and worsted suspenders were dutiable under that provision of the act of 1832 which imposed a tariff of 50 per cent ad valorem upon "all other manufactures of wool, or of which wool is a component part." That act imposed a duty of 10 per cent on "worsted-stuff goods, worsted shawls, and other manufactures of silk and worsted." And it being conceded by the counsel for the Government in that case that worsted is made out of wool by combing, and that it becomes thereby a distinct article, well known in commerce under the denomination of "worsted," it of course followed that these articles could not be classified as manufactures of wool. But the court did not hold that all manufactured articles in the production of which combed wool is used are to be regarded as manufactures of worsted. On the contrary, the chief justice of the Supreme Court in a subsequent case at the circuit (Riggs *v.* Frick, Taney's Circuit Court Decisions, 100) disclaimed any such broad application of the decision in the former case. At page 105 he says: "But neither of these terms—'combed wool' nor 'carded wool'—is used in any part of the law in describing the manufactures therein mentioned; the distinction taken in the act of Congress is between 'worsted' and 'woolen.' Although worsted is made of combed wool, yet we have seen nothing that would justify us in concluding that all manufactures of combed wool are worsted. On the contrary, for aught that appears to the court, there may be a variety of manufactures of combed wool which are not worsted, and which would be liable to the duties imposed on woolens."

If, as I think, it satisfactorily appears that the term "manufactures of worsted" when first introduced into our tariff laws referred exclusively to certain products manufactured from the long-combing wools, then it should be so construed and limited in all subsequent statutes upon the subject into which it may be introduced.

It has been repeatedly held that the designation or description of an article or class of articles in a tariff enactment is not to be extended beyond the articles which, according to commercial usage prevailing at the time the law is passed, are included therein, and that articles which may be subsequently invented or produced composed of different materials can not properly be included in such classification, although they have the same commercial designation and are applied to the same uses. (Curtiss *v.* Martin, 3 Howard, 106; United States *v.* One Hundred and Twelve Casks of Sugar, 8 Peters, 277; Roosevelt *v.* Maxwell, 3 Blatchford, 391; Baxter *v.* Maxwell, 4 Blatchford, 32; Bacon *v.* Bancroft, 1 Story, 341; Lee *v.* Lincoln, Ib., 610; United States *v.* Breed, 1 Sumner, 159.)

And in Roosevelt *v.* Maxwell, *supra*, it was held that when a term or classification when first introduced into a tariff act has, according to commercial usage, a well-understood and a well-defined signification, which limits its scope and application, and such term is transferred to and incorporated in subsequent tariff laws, it will be presumed that Congress did not intend to use the term in the later statutes in a sense different from that in which it had been used in the first enactment.

It being undisputed that the term "manufactures of worsted" when first employed in the tariff act of 1842 was commercially known to include only certain products of the long-combing wools, it would follow that, when used in subsequent statutes, it must be so understood if the principle of these decisions of the Supreme Court is correct.

In determining the question involved, regard should also be had to the provisions of section 2499, that if two or more rates of duty should be applicable to any imported article, it shall be classified for duty under the highest of such rates.

There is certainly room for very serious contention that the goods in question should be classified under paragraph 362 as well as 363; and in such cases it would seem to be the duty of the revenue officers to impose the higher rate. It is only in this way that in doubtful or balanced cases a judicial construction can be had. The Government can not apply to the courts for an interpretation of the law, but the importer can, if he deems the rate of duty imposed excessive or unlawful.

In construing tariff laws where there is doubt as to the classification arising from the employment of ambiguous terms, regard should also be had to the general scheme or policy which underlies their enactment, which seeks to graduate the rate of duty according to the cost or expense involved in the production of the articles to which it relates, and especially according to the quantum of labor, skilled and unskilled, which may be required for their manufacture. We find that this principle has been almost invariably observed in framing every act imposing duties, and the Supreme Court of the United States, in the case of Movius *v.* Arthur (95 U. S., 104), regarded it as of great value in determining doubtful cases where it was sought to so construe the law as to make the less expensive article pay the higher rate of duty.

From the data before me it appears that the cost of the machinery and labor required for the manufacture of these coatings and suitings is greater than that required for the manufacture of cassimeres and other woolen cloths which are used for the same purposes, and yet if duty is assessed under paragraph 363, they will be made to pay a rate of duty in many cases 30 per cent less than cassimeres and other woolen cloths costing in the foreign market the same price. It is not to be presumed that Congress intended so great a departure from the general plan of the statute.

As bearing upon this question of the intent of Congress, it is also a circumstance of great weight that in the present as well as in former tariff laws, woolen and worsted yarns are subjected to the same rate of duty, and if it was the intention to discriminate in favor of worsted products generally by imposing upon them a lower rate, this discrimination would have been extended to the different kinds of yarn, for it is in the treatment of the wool while in course of manufacture into yarn that the only difference occurs which creates the distinction between woolen and worsted.

So, too, in the case of ready-made clothing—there is no discrimination in the tariff law between clothing made from woolen and that made from so-called worsted cloths, but both are made to pay the same duty; and it is not reasonable to infer that it was intended to subject to different rates of duty cloths manufactured from yarn paying the same rate and used in the manufacture of clothing which pays when imported the same rate, and it should not be so held if by any fair construction of the law it can be avoided.

The familiar maxim should be applied that "A thing within the intention is within the statute, though not within the letter, and a thing within the letter is not within the statute unless within the intention."

Your decision being in accordance with the evident intention of the statute is, therefore, affirmed.

The questions involved in this appeal having been submitted to the Solicitor of the Treasury, the opinion of that officer, which is in harmony with the views above expressed, is herewith transmitted for your information.

This decision will also apply to the appeal (6659*v*) of Ballin, Joseph & Co., on entry of similar goods per *City of Paris*, April 11 last, which was transmitted with your letter of the 16th instant. (**9400.**)

[Opinion of the Solicitor of the Treasury above referred to.]

DEPARTMENT OF JUSTICE,
OFFICE OF THE SOLICITOR OF THE TREASURY,
Washington, D. C., May 25, 1889.

SIR: I have considered the questions involved in the matter of the appeal of Herrman, Sternbach & Co., No. 5220.

This is an appeal, after proper protest, from the ascertainment and assessment of duties by the collector of the port of New York on certain "worsted coatings" classified as "manufactures of wool costing under 60 cents per pound, and liable to duty at 35 cents per pound and 35 per cent ad valorem."

The collector of the port of New York has decided that this merchandise was to be classified for the purposes of duty under paragraph 362, T. I., new, which reads as follows:

"Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding 80 cents per pound, 35 cents per pound and 35 per cent ad valorem; valued at above 80 cents per pound, 35 cents per pound and in addition thereto 40 per cent ad valorem."

The officers of the port have held that these goods were "manufactures of wool." The importer alleges them to be a "manufacture composed wholly or in part of worsted," and that they should be classified as such, under paragragh 363, T. I., new, which reads as follows:

"Flannels, blankets, hats of wool, knit goods and all goods made on knitting frames, balmorals, woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals (except such as are composed in part of wool), not specially enumerated or provided for in this act, valued at not exceeding 30 cents per pound, 10 cents per pound; valued at above 30 cents per pound, and not exceeding 40 cents per pound, 12 cents per pound; valued at above 40 cents per pound and not exceeding 60 cents per pound, 18 cents per pound; valued at above 60 cents per pound and not exceeding 80 cents per pound, 24 cents per pound, and in addition thereto upon all the above-named articles 35 per cent ad valorem; valued at above 80 cents per pound, 35 cents per pound and in addition thereto 40 per cent ad valorem."

The two quotations above made from the act of March 3, 1883, are substantially the act of March 2, 1867.

Prior to the action complained of in this appeal this class of merchandise had been recognized by customs officers as subject to duty under paragraph 363, as "worsteds" or as "manufactures of worsted." A ruling long persisted in, it is contended, ought not to be changed except for the gravest of reasons. Seemingly it is thought by many engaged in this contention that a wrong, if hoary with age, gains such a status that it is almost impious to attempt its dislodgment. It has been suggested that a reclassification of manufactures, such as are involved in this case, is an "alteration of the law," and that such an "alteration" would bring calamity to all business, and, therefore, that such "alteration" would be criminal upon the part of the Secretary of the Treasury. Surely no sane person would contend that the Secretary, or any other officer of the Government, can "alter the law." Every one recognizes that power to be invested in the Congress alone; but it is made the duty of the Secretary of the Treasury to supervise the execution of the customs laws. He is charged with the duty and responsibility of *properly* executing these laws, and, of course, executing them as he understands them.

This responsibility is imposed upon him by his official oath and by the statutes. He is not necessarilly to execute these statutes as his predecessor understood them, or some other gentleman understands them, but as he understands them; and lapse of time, in which an error has been persisted in, is not a justification for him when

he is clearly satisfied that an erroneous construction has been given to the statutes by those who have preceded him. If an erroneous interpretation has been given of the act of March 2, 1867, or March 3, 1883, quiet will not come to the conscience of the present administrator of the law by the suggestion that the wrong may be nearly a quarter of a century old. When an erroneous interpretation is discovered, then is the opportune moment for its correction, and it is a gross perversion of language to say that he who, follows the dictates of conscience and an enlightened judgment, asserts what he believes to be the manifest will of the legislature, is guilty of the rank crime of usurping the functions of the legislature, and assuming to make "alterations in the law."

The merchandise involved in this controversy consists of cloths made entirely from wool. They are thick, close, compact fulled cloths, of heavy weight, and they are suitable for men's clothing. They have all the characteristics of woolen cloths; they are produced from precisely the same material. Every process in the preparation of the material, and of the manufacture, that is used in the production of woolen cloths, is resorted to in the production of so-called worsted cloths. They are of like value when finished; of like weight; and are adapted to the same uses, and are used by the same class of persons. They are so nearly alike that it is only the expert who can distinguish one from the other, and in many instances the most expert examiner is unable by sight or by handling to determine one from the other until he has had an opportunity to unravel and carefully inspect the yarn from which the cloth is woven. But it is contended by the appellants that the processes used in the manufacture of the cloths are not the same; that in the case of worsted cloth one process is used not known to woolen; that the wool from which the worsted is woven is "combed," which is not the case with the woolen variety. In the manufacture of woolen and of worsted cloth of to-day, the processes of washing, shearing, sorting, scouring, drying, oiling, pickering, carding dyeing, spinning, twisting, spooling, dressing, weaving, fulling, scouring, coloring, crabbing, shearing, pressing, brushing, are identically the same. The wool is of the same quality. It may be, and in this case is, fine short-staple merino wool, or wool of similar breeds, known as "clothing-wool," In the process of manufacture, up to and including carding, the methods of the manufacture are precisely the same in both kinds of cloth; but at that point the wool intended for worsted cloth is subject to one additional manipulation. After being carded it is "combed." When "combed," however, the methods used in the manufacture of woolen cloth are again resumed and continued to the end, so that the only method known to worsted cloth not known to woolen is the one process of "combing."

If, therefore, worsted cloths are not to be classified as manufactures of wool, it is because of this one difference in the process of manufacture, or because the "manufactures of worsted" or "worsteds" have a "commercial designation." This "commercial designation," however, to be available in this controversy, must have been adopted, applied, and recognized at or prior to the time when the commodity to which it was applied was first known to the tariff laws. Worsteds have been known to these laws since 1816, but the phraseology of the present law in all of its substance was adopted first in the act of 1867, so that for the purposes of this contention it is enough to consider whether the worsted cloths of to-day were included among the articles to which the "commercial designation" of worsteds was applied at that period. In this connection we may remark that in the argument in the case of Riggs *v.* Frick it was asserted that the mere "combing" of the wool made any kind of cloth "worsted," but the court said:

"Although worsted is made of 'combed' wool, yet we have seen nothing to justify us in concluding that all manufactures of 'combed' wool are worsted. On the contrary, for aught that appears to the court, there may be a variety of manufactures of 'combed' wool which are not worsted and that would be liable to the duties imposed on woolens."

What was meant by "manufactures of worsteds" at the time of the passage of the act of 1867 is a most pertinent inquiry in discussing the question of "commercial designation."

It was a manufacture that *then* existed that was to be affected by the law; it was something *then* known to commerce or to manufactures that was to receive this baptism of "worsteds." It was a something that *then* existed and had a place in the commercial world.

If this is true, then no argument drawn from "commercial designation" can help the case of the appellants, for at that time the class of cloths known to this controversy had no existence. If there were at that time a few manufactures somewhat similar to cloths of this character they were known by another name than that of worsted; they were known as diagonals, as suitings, as corkscrews, as trouserings, and not as worsteds.

The worsteds of that period were thin, light stuffs adapted to the clothing of

women and children. They were very far removed in character from cloths. Worsted yarn at that time was made by "combing" the coarse long-staple wool of English breeds. There was no machinery at that time capable of "combing" the fine, short wool of the Saxony, Merino, and similar breeds such as enter in the manufacture of the cloths in controversy. The fiber of the coarser wools equals about 1-480th part of an inch in diameter. The finer about the 1-1300th part of an inch in diameter. The serrations of the former are about 1,000 to the inch, and of the latter 2,700. The length of the former varies from 6 to 16 inches; the latter frequently are not longer than from 1 to 2 inches. The worsteds of the period of the enactment of the law were "combed" from coarser longer varieties. The worsteds of this controversy are "combed" from the shorter and finer varieties of wool. The "worsteds" of twenty-five years ago but seldom weighed more than 4 ounces to the square yard; worsted cloths of the present time not infrequently weigh 24 ounces to the square yard. The former worsteds were for the handicraft of the dressmaker; the latter for the tailor. The "worsted stuffs," or the "stuffs" known as worsteds twenty years ago, were as unlike the cloths of to-day as they are unlike Brussels carpet. Carpets may be, and sometimes are, made from the "*combed*" coarse long-staple wools; yet who would contend that because of this "combing" process carpets should be admitted to classification as worsteds under paragraph 363. It can scarcely be contended that the simple process of "combing" a material should give the product into which it is made a distinctive character or "commercial designation" irrespective of the nature of that material. If the opposite of this be so, then that manufacture made from "combed" cotton should be classified as a worsted. To so classify it, however, would be absurd; and hence we may say that it is not the process or method of treatment of the raw material, nor yet the material itself that is the subject of the law, but it is the class of goods known to the commerce of the country at the time the law is approved. If the "worsted stuffs" known to the commerce of the country in 1867 were not the manufactures intended to be covered by the language of the act, then there was no substantive, actual entity that could have been intended. The worsted cloths of this day were not known. There is no part of the material from which worsted cloths are manufactured at any time during their process of manufacture known by the name of "worsteds." There was no article known to either manufacturers or commerce as worsteds, save that merchandise known as "worsted stuffs."

It might be said that carpet can not be classified as worsted, because it is otherwise provided for in the act. It is provided for as carpet. Is not this true of the manufacture we are considering? Is it not classified as woolen cloth, or as a manufacture of wool? If the worsted cloths involved in this appeal are not entitled, because of their identity with the worsteds, or manufactures of worsteds, of 1867, to be so classified, then they are not enumerated in paragraph 363. It is only those worsteds known to commerce and manufacturers of that period as worsteds that are entitled to that designation; and these particular cloths must be of that kind so known at that time to have the benefits of paragraph 363. They must be included under the designation of manufactures of worsted or else they are not named at all in that paragraph. And if they are cloths, and if they are made from wool, then they are entitled to the designation of woolen cloths, or of manufactures of wool provided for in the preceding paragraph. They certainly much more resemble woolen cloths than they do the worsteds of the period of the statute. In material; in methods of manufacture; in appearance; in weight; in value; in use, they are identical with woolen cloths. Compared with the worsted stuffs of 1867, we find that they are dissimilar in material; in their value; in their use; and have nothing in common, excepting the one process of "combing." There are at least twenty distinct processes applied to wool from the time it leaves the back of a sheep up to the time it becomes a finished cloth. Nineteen of these processes are common to worsted cloths and to woolen. But suppose that the cloths in the controversy are not woolen cloths, are not named in paragraph 362, nor yet in 363, then the classification of the collector would be correct, because, being unenumerated, he would be required to classify them and impose the duty borne by the article they most nearly resemble, which would be woolen cloths.

These cloths being so nearly identical with woolen cloths, the language of the statute would indicate the intention of the Congress to have them so classified for the purposes of duties. Woolen yarn and worsted yarn pay the same rate. Ready-made clothing, whether of worsted or wool, pays the same rate, as do cloaks, dolmans, and other articles enumerated in paragraph 367. Clothing wools and "combing" wools are also placed upon an equality.

In the grouping of articles in the paragraphs of the act of 1883 Congress has in general observed a rule of equality. It is equals that we find grouped together. Paragraph 362, we find, provides for woolen cloths, woolen shawls, and manufactures made wholly or in part of wool. This enumeration, in connection with the rates provided for, shows the intention to adhere to a general class, for in the manufac-

tures that may be in part of wool the rate of duty clearly indicates that the component part of the material would be of approximate value to the wool.

The same grouping of equals is found in paragraph 363, "flannels, blankets, hats of wool, balmorals, knit goods, woolen and worsted yarn, manufactures composed in whole or in part of worsted, the hair of the alpaca, goat, or other animals." Here, again, we find articles of the same general character of value grouped together, but of less value, or inferior grade to those of the preceding paragraph. This habit of classifying articles having relation to each other in their general phases of character, quality, value, and similtude runs throughout the law. Not without interruption or with entire uniformity, it is true, but so generally and with such marked uniformity as to show a purpose of intention or design on the part of the Congress. Paragraph 362 groups together the most valuable manufactures of wool, the following paragraph those of less value or importance. Does not this uniformity of expressed design sustain the belief that Congress did not intend by the language "all manufactures of worsted" to include among the inferior articles of paragraph 363 cloths made wholly of wool, of the highest value, perfect quality, and elaborate finish? Mr. Blackstone, among other rules of interpretation, says: "A statute which treats of persons and things of an inferior rank can not, by any general words, be extended to those of a superior."

If this rule should be applied to the interpretation of paragraph 363 we would have authority for saying that superior high-ranking woolen cloths, involved in this appeal, should not be included among the flannels, balmorals, knit goods, etc., specially enumerated in the paragraph, and in so saying would but declare that mere "general words do not extend a statute treating of inferior things to a superior." In interpreting the statute the objects to be attained by the statute are always to be considered as a most important aid in arriving at the will of the legislature. While the primary object of the act of March 3, 1883, was to secure revenue for the use of the Government, another object, scarcely less important, was to protect the manufacturing interests of the country; to secure its industrial independence, and to furnish an abundant labor market for its people. Having this in mind, it is scarcely conceivable that it was the purpose of Congress, by the use of the word "worsted" in paragraph 363, to admit valuable material for clothing at such rates of duty as would destroy the woolen manufactures of the country and thwart the purposes of a protective system of duties. Prior to 1883, the importations of worsteds were of comparatively insignificant value; but under the interpretation given to paragraph 363, and the improvident admission of heavy cloths, classified as manufactures of worsted, their importation has grown to an enormous extent, resulting in the closing of many of our mills, and bankruptcy of many of our manufacturers, and the enforced idleness of very many of our operatives; results that could not have been within the contemplation of Congress in the enactment of the law. To say that Congress intended the classification that is contended for by the appellants, is to say that the woolen-cloth industries of this country were not in the minds of our legislators when they framed the protective features of the act of 1883. It is estimated that 3½ pounds of unwashed wool are necessary for the manufacture of 1 pound of cloth. In fixing the rate of duty, Congress undoubtedly intended, by the specific duty on cloths, to compensate the manufacturer for the duty he had to pay upon his wool, yet under the construction that is contended for by the appellants, the home manufacturer of woolen cloths is thus protected, and secures an equivalent in protection for the duty he must pay upon the wool he consumes, while the manufacturer of the so-called worsted cloths receives no such equivalent of protection. Yet, while the domestic manufacturer of worsted is subjected to ruinous competition, the domestic manufacturer of woolen cloths is doomed to bankruptcy, because the imported "worsted" serves all of the purposes of a woolen cloth, and because admitted at a less rate of duty takes its place in the market. It is scarcely possible that this inequality was intended by the Congress.

It is a rule of construction that the parts of the statute shall be construed, if possible, as that the whole of it may be given a reasonable operation. This canon of interpretation demands that the woolen cloths and the alleged worsted cloths shall be placed upon an equality in the amount of duties levied upon each.

If clothing wool and "combing" wool are treated as equals by the statute, if the same is true of woolen yarn and worsted yarn, and of ready-made clothing, and of cloaks, dolmans, etc., made from both materials, if all of these are placed upon an equality in the amount of duty each must pay, what reason could have existed in the minds of legislators for the gross inequality that it is insisted by appellants should be shown to woolen cloths and to these alleged worsted cloths.

I fully agree with the customs officers of the port of New York in their action from which this appeal has been taken.

Very respectfully,

W. P. HEPBURN,
Solicitor.

The Hon. SECRETARY OF THE TREASURY.

ACT MAY 9, 1890, PROVIDING FOR THE CLASSIFICATION OF WORSTED CLOTHS AS WOOLENS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he hereby is, authorized and directed to classify as woolen cloths, all imports of worsted cloth, whether known under the name of worsted cloth or under the names of worsteds or diagonals, or otherwise.

NOVEMBER 17, 1890.

Mr. Justice Gray, after stating the case as above, delivered the opinion of the Court.

The act of March 3, 1883, chapter 121, under "Schedule K, Wool and Woolens" (22 Stat., 508, 509), imposes duties as follows:

"Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding eighty cents per pound, thirty-five cents per pound and thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

"Flannels, blankets, hats of wool, knit goods, and all goods made on knitting-frames, balmorals, woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals (except such as are composed in part of wool), not specially enumerated or provided for in this act, valued at not exceeding thirty cents per pound, ten cents per pound; valued at above thirty cents per pound, and not exceeding forty cents per pound, twelve cents per pound; valued at above forty cents per pound, and not exceeding sixty cents per pound, eighteen cents per pound; valued at above sixty cents per pound, and not exceeding eighty cents per pound, twenty-four cents per pound; and in addition thereto, upon all the above-named articles, thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem."

In the interpretation of the customs acts, nothing is better settled than that words are to receive their commercial meaning; and that when goods of a particular kind, which would otherwise be comprehended in a class, are subjected to a distinct rate of duty from that imposed upon the class generally, they are taken out of that class for the purpose of the assessment of duties.

Of the two successive paragraphs in the customs acts of 1883, upon which the parties respectively rely, the first imposes a certain scale of duties on "all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act;" and the second imposes a lower scale of duties on "all manufactures of every description, composed wholly or in part of worsted." It is hardly necessary to observe that the subsequent words inclosed in a parenthesis ("except such as are composed in part of wool") evidently qualify only the intervening clause "the hair of the alpaca, goat, or other animals," and have no bearing upon this case.

Though worsted is doubtless a product of wool, and might in some aspects be considered a manufacture of wool, yet manufactures of worsted being subjected by the second paragraph to different duties from those imposed by the first paragraph on manufactures of wool, it necessarily follows that a manufacture of worsted can not be considered as a manufacture of wool, within the meaning of this statute.

That shoddy, though a product, and in some sense a manufacture of wool, is not to be considered as itself wool, or a manufacture of wool within the meaning of the statute, is clearly shown by the paragraph next preceding the two above quoted, which makes the duty on "woolen rags, shoddy, mungo, waste, and flocks, 10 cents per pound." (Lennig *v.* Maxwell, 3 Blatchford, 125.)

It being distinctly found, as a matter of fact, that the goods in question are called or known in the trade as "worsteds," and are composed mainly of worsted, but mixed with a small proportion of shoddy and cotton, the circuit court rightly held that they were subject to duty as manufactures of worsted, and not as manufactures of wool.

The cases of Elliott *v.* Swartout (10 Pet., 137), and Riggs *v.* Frick (Taney, 100), are directly in point, and our conclusion is supported by many decisions of this court in analogous cases (Homer *v.* The collector, 1 Wall., 486; Reiche *v.* Smythe, 13 Wall., 162; Movius *v.* Arthur, 95 U. S., 144; Arthur *v.* Morrison, 96 U. S., 108; Arthur *v.* Lahey, 96 U. S., 112; Arthur *v.* Stephanii, 96 U. S., 125; Arthur *v.* Davies, 96 U. S., 135; Arthur *v.* Rheims, 96 U. S., 143; Swan *v.* Arthur, 103 U. S., 597; Victor *v.* Arthur, 104 U. S., 498.

Judgment affirmed.

TREASURY DEPARTMENT, *May 27, 1889.*

WOOL—CERTAIN BASKETS—AND NOT AS TOYS.—The Department is in receipt of your letter of the 3d instant, submitting the appeal (6385*v*) of Messrs. C. Goebert & Son from your assessment of duty at the rate of 35 per cent ad valorem, on certain baskets imported by them per *Switzerland*, March 8, 1889, and claimed to be dutiable at the rate of 30 per cent ad valorem, under the provision for "baskets," in T. I., 395.

The appraiser reports that the articles are small baskets manufactured of different materials, such as willow, metal, and wool, which were returned for duty as "toys," under T. I., 425, but that on further consideration he is inclined to believe that they are not intended for the amusement of children, and is of opinion that as wool forms a conspicuous and important feature in their manufacture they would be properly classified as "manufactures in part of wool under T. I., 362."

The provision of law contained in T. I., 395, imposes a duty of 30 per cent ad valorem, on "baskets and all other articles composed of grass, osier, palm leaf, whalebone, or willow, or straw," and as the baskets in question, which are apparently intended to be used for holding confectionery and not as toys, are not composed of any of the materials specified except that they contain a small quantity of willow, the Department is of opinion that they are properly dutiable as manufactures in part of wool as suggested by the appraiser.

You are, therefore, requested to reliquidate the entry accordingly. **(9403.)**

TREASURY DEPARTMENT, *June 7, 1889.*

WASTE, WOOLEN OR WORSTED, BROKEN LAPS.—The Department is in receipt of your letter of the 9th ultimo, reporting on the appeal (5623*v*) of the Providence Worsted Mills from your decision assessing duty at the rate of 60 cents per pound on certain so-called "worsted waste," imported into your port per steamer *Nevada*, on the 2d of March last, which the appellants claim to be dutiable at the rate of 10 cents per pound.

It appears that the merchandise covered by the said appeal is the same as that which was the subject of appeal (4755*v*) of Messrs. R. F. Downing & Co., which was forwarded by you to the Department on the 13th of April last, the last-named parties being the consignees at your port who made the entry of the merchandise.

The claim of the appellants in this case is that the merchandise should be classified as "woolen waste," under the provision in Schedule K (T. I., 361) for "waste." The special report of the U. S. appraiser at your port, and an inspection of samples, however, show that the merchandise is not "woolen" or "worsted waste," within the decision of the court in the case referred to in Synopsis 8731, inasmuch as it consists almost entirely of broken laps, which, although similar in character to broken tops, is one step farther advanced in the manufacture of yarn, and contains a slight admixture of rovings.

Upon submitting the samples to the U. S. appraiser at Philadelphia, that officer reports that the merchandise is of the same description as the article which is returned at that port as scoured wool, in other than ordinary condition, etc.; that it is not a legitimate waste; and that in the judgment of the best experts to whom the samples were shown it is not known commercially as "wool waste," or bought and sold as such; that it does not contain any thread or ring waste, and that it can be returned to the cards in its present condition without undergoing any process of manufacture, and is more valuable than the scoured wool of the same class, as the noils, burrs, etc., have been extracted, leaving only what might be termed "the cream of the wool."

Under these circumstances the Department holds, in accordance with the principle enunciated in its ruling of March 22 last (Synopsis 9303), that the claim of the appellants must be rejected.

Your decision in assessing duty thereon at the rate of 60 cents per pound, as scoured wool of class one, imported in other than ordinary condition, is hereby affirmed. **(9422.)**

TREASURY DEPARTMENT, *June 27, 1889.*

SAMPLES OF CARPETS.—The Department is in receipt of your letter of the 4th instant, submitting the appeal (8600*v*) of Messrs. W. & J. Sloane from your assessment of duty on certain samples of carpets imported by them per *The Queen*, March 29, 1889, and claimed to be samples of no commercial value.

The appellants state that the samples are pieces of carpet about 1¼ yards in length, which are cut from the whole piece while in the loom and are sent in advance of the regular goods for the sole purpose of securing orders, and that they are only of sufficient dimensions to display the style and pattern, and are, in most cases, accompanied by a border to match.

The appraiser reports that the samples have a commercial value and are fit for use as mats or rugs, and that they were classified for duty as Axminster carpeting under the provisions therefor in T. I., 369, and in accordance with the Department's decision of February 1, 1876 (Synopsis 2640).

In view of this report and of the provision in T. I., 378, that "mats, rugs, * * * bedsides, and other portions of carpets or carpeting shall be subjected to the rate of duty * * * imposed on carpets or carpeting of like character or description," the Department is of opinion that such pieces of carpet were properly dutiable, and your assessment of duty thereon is hereby affirmed.

The appraiser at Philadelphia, in reporting on said appeal under date of the 22d instant, states that samples of carpets imported at that port are usually stabbed or cut to destroy their commercial value, and the Department is of opinion that when so stabbed or cut they may be properly regarded as having no commercial value and admitted free as samples. **(9462.)**

TREASURY DEPARTMENT, *July 24, 1889.*

GARNETED WOOL WASTE AND CARBONATED WOOL WASTE.—The Department is in receipt of your letter of the 7th ultimo, transmitting the appeal (9110*v*) of Messrs. J. Wild & Co. from your decision assessing duty at the rate of 30 cents per pound on certain so-called garneted wool waste imported into your port per *Ohio* on the 4th of March last, which the appellants claim to be dutiable at the rate of 10 cents per pound, under the provision in schedule K (T. I., 361), for "woolen * * * waste."

It appears from the special report of the U. S. appraiser and an inspection of samples that the merchandise in question consists of so-called woolen waste which has been garneted, or put through some process by which it is practically restored to the condition of unmanufactured scoured wool of the first class.

The question as to the classification of merchandise of this character was decided by the Department on the 26th of October, 1887 (Synopsis 8499), and it was then, as it was on the 13th of July, 1887 (Synopsis 8340), held that woolen waste which may have been broken up and put through the garneting machine, whereby it becomes practically scoured wool, was dutiable at the rate prescribed for scoured wool—that is to say, when of the first class and costing under 30 cents per pound in the unwashed condition, at a duty of 30 cents per pound, as assessed by you.

Under these circumstances your decision is affirmed.

Samples of the so-called garneted wool waste were submitted to the conference of U. S. appraisers which was recently in session at your port, with the request that they examine the same and submit their views as to the proper classification for duty of such substance under the existing tariff acts, and the Department is

now in receipt of a report from the said conference, dated the 11th instant. In this report it appears that the appraising officers are of opinion that some of the samples submitted to the conference bear no evidence whatever of having been garneted, the same being probably wool which was carded only, and which is in a scoured condition, equal in almost every respect to the ordinary scoured wool, and fit for the same use to which the latter is generally applied.

The appraising officers also consided the general question as to the proper classification of so-called garneted, carbonated, and other similar wool wastes, and report that, in their opinion, any process of manufacture whereby the value and character of a refuse article, such as waste of wool as in the cases mentioned, have been changed or enhanced and its identity as a waste or worthless substance destroyed, so that it becomes in fact scoured wool, it no longer belongs to the category of waste, but should be classified as scoured wool, which it actually is. It is further stated that "the so-called carbonated and garneted wastes have undergone a very decided process of manufacture; their value has been increased to within a trifle of the value of wool itself; their appearance is made so closely to resemble the actual article as to deceive even experts, and by an admixture of the manufactured article with the natural wool their purposes of use are identically the same," and should, they think, be classified for duty at the same rate as the wool from whence they came, and made so closely to resemble.

These views accord with the rulings of the Department above mentioned, and seem to be correct and proper. **(9508.)**

TREASURY DEPARTMENT, *July 24, 1889.*

FLANNELS.—The Department is in receipt of your letter of the 21st ultimo, reporting further on the appeal (8759*v*) of Messrs. G. W. Sheldon & Co. from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, on certain "woolen cloth in the gray," imported by them per *England*, May 6, 1889, and claimed to be dutiable at the rate of 18 cents per pound and 35 per cent ad valorem, under the provisions for "flannels" in T. I., 363.

The appraiser reports that the goods consist of a woolen cloth unfinished and undyed, which is commercially known as a woolen cloth in the gray, and can be used as ladies' cloth and as coffin-cloth, and he submits certificates from four of the leading importers of woolen cloths in support of such commercial designation.

The appraiser at Philadelphia, to whom the papers and samples were submitted, reports that such cloths in a finished condition are imported at that port and used for carriage cloths and for ladies' coating and suitings, and states that, in his opinion, they come clearly within the provision for "woolen cloths" in T. I., 362.

The Department is of opinion that the cloths in question were properly classified under said provision, and your assessment of duty thereon is hereby affirmed. **(9512.)**

TREASURY DEPARTMENT, *August 1, 1889.*

MACHINE LAPPINGS.—The Department is in receipt of your letter of the 17th ultimo, submitting the appeal (2091*w*) of Messrs. J. C. Bloomfield & Co. from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, on certain machine lappings imported by them per *Arizona*, May 13, 1889.

The appellants claim that the merchandise in question is a manufacture of worsted and flax, and entitled to entry at the rate of 12 cents per pound and 35 per cent ad valorem, under the provision in T. I., 363, for all manufactures of every description composed wholly or in part of worsted.

The appraiser reports that upon a chemical analysis of the article, which is com-

mercially known as "lapping," and is used for covering cylinders upon which calico is printed, it was found to be composed of a *wool* filling and a flax warp.

The claim of the appellants is, therefore rejected and your assessment of duty thereon under the provision in T. I., 363, for "all manufactures of wool of every description made wholly or in part of wool," is hereby affirmed. **(9518.)**

TREASURY DEPARTMENT, *September 26, 1889.*

DUTCH CARPETS.—The Department is in receipt of a letter dated the 20th instant from W. & J. Sloane, complaining of a recent change at your port in the classification of certain so-called wool Dutch carpet, which they state has for years been admitted at the rate of 40 per cent ad valorem under the provisions in T. I., 378, for carpets and carpeting of wool, but which is now classified as "worsted-chain Venetian" carpet, at the rate of 12 cents per square yard and 30 per cent ad valorem under T. I., 374.

The matter of the classification of these carpets has been the subject of considerable correspondence with customs officers at your port, Boston, and Philadelphia, and was finally submitted to the conference of appraisers held at your port in July last, with the result that the conference, after a careful consideration and microscopic examination by competent experts, reported that so-called Dutch carpets are the worsted-chain Venetian carpets provided for in paragraph 374, T. I., new, and are properly dutiable thereunder.

This is the classification which it is understood has been followed at Philadelphia for some time on the importation of these carpets, and, as appears from the complaint above mentioned, has now been adopted at your port.

The Department sees no good reason for interfering with the same, and you will please advise the complainants, who have been referred to you, in the matter accordingly. **(9632.)**

TREASURY DEPARTMENT, *October 14, 1889.*

WOOL KNIT GLOVES.—The Department is in receipt of your letter of August 28 last, submitting the appeal (5695 *w*) of Messrs. Marshall, Field & Co. from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain gloves imported by them (entry No. 5295) July 15, 1889, and claimed to be dutiable at the rate of 40 cents per pound and 35 per cent ad valorem, as "wool wearing apparel" under T. I., 366, on the ground that they are men's gloves made of plain woolen cloth, cut and sewn, and are not knit goods.

The appraiser reports that the gloves in question were made on a knitting-frame, and were therefore dutiable at the assessed rate under the provision for wool knit goods in T. I., 363.

An inspection of the sample shows that the gloves are made of *knit* woolen cloth, being cut out of this material and sewn; and the appraiser at New York, to whom the samples were submitted, reports that they are commercially known as wool knit gloves, and are so classified at that port.

Your assessment of duty thereon is hereby affirmed. **(9657.)**

TREASURY DEPARTMENT, *November 1, 1889.*

DRESS GOODS—WOOL AND COTTON.—The Department duly received your letter of September 4 last, submitting the appeal (6283 *w*) of Messrs. Kahn Bros., Brine & Co. from your assessment of duty, at the rate of 9 cents per pound and 40 per cent ad valorem, on certain dress goods imported by them via New York, July 22, 1889.

The samples have been submitted to the appraiser at New York, who reports that

upon chemical analysis they are found to be composed of wool and cotton, and to be properly dutiable at the rate of 7 cents per square yard and 40 per cent ad valorem, under T. I., 365, as claimed by the appellants. He also states that the cotton threads are discernible by the naked eye and form a part of the pattern of the goods, so that it is evident that cotton was not introduced for the purpose of degrading the fabric so as to escape the proper rate of duty, as was the case with the merchandise covered by decision, Synopsis 8624.

You are, therefore, authorized to readjust the entry and to take measures for refunding the excess of duty. (**9678.**)

TREASURY DEPARTMENT, *November 4, 1889.*

MASKS.—The Department is in receipt of your letter of the 28th ultimo, submitting the appeal (539 *x*) of Messrs. E. A. Prior & Co. from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain masks, imported by them per *America*, September 6, 1889, and classified for duty under T. I., 362, as "manufactures * * * made wholly or in part of wool."

The appellants claim that the masks in question are made of paper and cotton flannel, not wool, and that they are dutiable at the rate of 15 per cent ad valorem, under T. I., 388, as "manufactures of paper."

The appraiser reports that the articles consist of paper masks with cotton-flannel cowls and flowing beards of wool, and that a similar mask was submitted by him to the Board of Appraisers at the conference in July, 1889, and thereby held to be dutiable as manufactures in part of wool under the Department's decision, Synopsis 7566.

An inspection of the sample submitted shows that the masks have eyebrows, mustaches, and a long beard of wool, and the Department decides that they were properly classified.

Your assessment of duty thereon is hereby affirmed. * * * (**9687.**)

TREASURY DEPARTMENT, *November 6, 1889.*

WOOL, HATS OF—MINERS'.—The Department is in receipt of your letter of the 1st instant, further reporting on the appeal (4736 *w*) of Messrs. L. Toplitz & Co. from your decision assessing duty, at the rate of 10 cents per pound and 35 per cent ad valorem, on certain miners' hats, imported per *Brooklyn City* and *Llandoff City*, in July and August last, which the appellants claim to be dutiable at the rate of 30 per cent ad valorem, under the provision in Schedule N, T. I., 400, for "bonnets, hats, and hoods for men, women, and children," etc.

It appears that the merchandise was classified by you under the provision in Schedule K, T. I., 363, for "hats of wool," the U. S. appraiser having reported the hats to be composed of a manufacture of wool stiffened by a solution of boiled resin, and inasmuch as they were valued at less than 30 cents per pound they were subjected to a duty of 10 cents per pound and 35 per cent ad valorem, under the provision in Schedule K, T. I., 363, as aforesaid.

Upon reference to Department's ruling of January 5, 1881 (Synopsis 4735), it would seem that the hats which were then the subject of consideration differed from those in question, inasmuch as they were manufactured of felt, resin, etc., and which did not come within the category of "hats of wool."

With a view to ascertain the proper classification of the hats in question, the conference of U. S. appraisers, recently in session at New York, were requested to examine into the matter and report under what provision of the tariff act, in the opinion of the conference, the said hats properly came, and the Department is in receipt of a communication, dated the 22d ultimo, from said conference, from which it

appears that a sample of the hats was submitted to the United States laboratory for analysis, and that the report of the laboratory was that it was a hat of wool saturated with resin.

Under these circumstances the Department decides that the appeal is not well taken, and that the hats in question are liable to duty at the rate assessed by you under such special provision of the tariff in Schedule K for "hats of wool."

Your decision is therefore affirmed. (**9691.**)

TREASURY DEPARTMENT, *November 6, 1889.*

SILK AND WOOL CLOAKINGS.—The Department is in receipt of your letter of the 22d ultimo, transmitting the appeal (9948*w*) of Messrs. Megroz, Portier, Grose & Co., from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain silk and wool goods, imported by them per *Labrador*, September 3, 1885, and claimed to be dutiable at the rate of 7 cents per square yard and 40 per cent ad valorem as dress goods, under T. I., 365.

The appraiser reports that the goods in question are silk and wool cloakings, and that they are not commercially known or sold as dress goods.

The Department is therefore of opinion that the goods were properly classified as manufactures in part of wool under the provision therefor in T. I., 362, and its decision of February 24, 1886 (Synopsis 7377), and your assessment of duty thereon is hereby affirmed. (**9692.**)

TREASURY DEPARTMENT, *November 6, 1889.*

SPUN SILK.—The Department is in receipt of your letter of the 1st instant, reporting further on the appeal (6691*w*) of Mr. F. A. Straus from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain "spun silk" imported by him per *Servia* August 6, 1889, and claimed to be dutiable at the rate of 30 per cent ad valorem, under the provision for "spun silk" in T. I., 381.

The appraiser, it appears, returned the goods in question, which are invoiced as "silk and merino," as "worsted yarn over 80 cents," and reports that on microscopic analysis they were found to consist approximately of: Silk, 61·05 per cent; wool, 30·60 per cent; ramie, 5·39 per cent; cotton, 3·06.

This analysis shows that they are not "silk twist," and the claim of the appellant is therefore rejected.

I would state, however, that, in the opinion of the Department, the goods are not "worsted yarn," but are dutiable at the rate assessed as "manufactures * * * composed * * * in part of worsted," under the provision therefor in T. I., 363, it being understood that the duty in such case is higher than that for manufactures of silk. (**9694.**)

TREASURY DEPARTMENT, *November 20, 1889.*

BUGGY-APRONS.—The Department is in receipt of your letter of the 28th ultimo, transmitting the appeal (448*x*) of the Michigan Buggy Company from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, under T. I., 362, on certain "buggy-aprons," imported by the appellants per *Etruria*, and claimed by the appellants to be dutiable, under T. I., 378, as rugs not otherwise provided for.

It appears that the merchandise in question consists of aprons composed of wool, cotton, and India rubber; that they are used in front of buggies to protect the occupants in stormy weather from rain, snow, or mud; and that they are not similar to the articles covered by Department's decision of March 2, 1888 (Synopsis 8702), and do not fall within the definition of rugs therein given.

The U. S. appraiser at the port of New York reports that such articles are classified by him under T. I., 362, as manufactures in part of wool, not specially enumerated or provided for, which is the classification made in the present case.

The articles in question not being rugs, the claim of the appellant is hereby rejected, and your assessment of duty is affirmed. (**9721.**)

TREASURY DEPARTMENT, *December 4, 1889.*

FLANNELS.—The Department is in receipt of your letter of the 6th ultimo, transmitting the appeal (943 *x*) of Messrs. K. Mandell & Co., from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, on certain flannels, imported by them per *Teutonic*, August 15, 1889, and returned by the appraiser on the invoice as "manufactures of wool."

The appellants claim that the goods in question are in fact flannels, and are known as such in the trade, and that they should be classified as such under T. I., 363, and dutiable at the rate of 24 cents per pound and 35 per cent ad valorem.

The appraiser at Philadelphia, to whom the sample of goods has been submitted, reports that they are known commercially as flannels; that they are made of a cotton and wool warp, with a woolen filling, and that while this class of goods has not been received at that port, it would, if entered, be returned under T. I., 363, as claimed by the importers.

Inasmuch as the goods in question strongly resemble flannels, and assimilate thereto in material, quality, and texture, the Department is of the opinion that the claim of the appellants is well founded, and you are hereby authorized to reliquidate the entry accordingly, and take the necessary steps for refunding the duties exacted in excess. (**9757.**)

TREASURY DEPARTMENT, *January 15, 1890.*

"WHITE CHEVRETTE" OR ANGORA GOAT HAIR.—The Department is in receipt of your letter of the 8th of November last, further reporting on the appeal (6510 *w*) of Mr. Henry Schmidt from your decision assessing duty, at the rate of 10 cents per pound, on certain goat hair, imported into your port per *Utopia*, August 14, 1889, which the appellant claims to be exempt from duty under the provision in the free list, T. I., 717, for "hair of all kinds, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially enumerated or provided for in this act."

It appears from the special reports of the appraiser, transmitted by you, that the hair in question was returned by him under the provision in Schedule K (T. I., 354), because it consisted of hair taken from Angora goat skins, and although commercially known as "white chevrette," which is ordinarily obtained from skins of the Angora kid by a liming process after the animals are killed, and is of the poorer class of Angora goat hair, it is liable to duty under such provision, which specifies "all hair of the alpaca, goat, and other like animals." That the article is hair of the Angora goat is also proven by certificates from numerous dealers in wool, hair, etc., at your port.

The fact that the article is Angora goat hair removes it from the category of the hair specified in the "free list," because (1) it is therein prescribed that to exempt hair from duty it must be otherwise unenumerated, and (2) Angora goat skins with the wool on are specially excluded from exemption of duty (T. I., 719).

Angora goat hair is well recognized as belonging to class 2, wools, and as it is clearly covered by the said provision in Schedule K (T. I., 354) the Department decides, regardless of the use to which it may be applied, that it is dutiable at the rate of 10 cents per pound, as assessed by you.

Your decision is affirmed. (**9810.**)

TREASURY DEPARTMENT, *January 22, 1890.*

ADRIANOPLE WOOL.—The Department duly received your letter of October 7 last, further relating to the appeals (2966 *w*) of Messrs. John and James Dobson, per *Vicenzo Galatola*, May 2, 1889, and (3916 *w*) of Mr. H. Schmidt, per *Adriatic*, June 1, 1889, from your decision assessing duty, at the rate of 10 cents per pound, on certain unwashed Adrianople wool, imported by the said vessels, respectively, which the appellants claim to be wool of class 3, and to be dutiable at the rate of 2½ cents per pound, under the provision in Schedule K, T. I., 359, being valued at less than 12 cents per pound.

The appellants claim that wool of this character—that is, wool from Adrianople—has been imported by themselves and others for many years, and, until the present instance, passed at the ports of New York and Philadelphia as third-class wool; that it was reported in the year 1872 by Mr. George William Bond, who had been charged by the Department with the preparation of the standard wool samples, as class-three wool; that it is of the same general quality and character as at that time, and is expressly covered by the provision in paragraph 355, T. I., for "native Smyrna, and including all such wools of like character as have been heretofore imported into the United States from Turkey * * *."

It is learned from authoritative sources that the original sheep of Roumelia and adjoining provinces were of the Zackel and fat or broadtail races; but long before 1867 these had been crossed upon to a very considerable extent by Merinos or other races of sheep clearly of the first class. There remain there, however, sheep which yield only wool of the third class. In 1870 Mr. George William Bond obtained samples of Adrianople or Roumelia wool of class 1, also one sample of class 3; the former, however, were lost by shipwreck, and the latter was destroyed by fire at Boston, consequently the cabinet of standard samples prepared for the Department by Mr. Bond in 1872 did not include a sample of such wool, and the sample (No. 33) of class 1 in the present cabinet of standard samples, which were reported upon by the commission appointed by the Secretary of Treasury in 1884, is the only sample of Adrianople wool that has ever been adopted by the Department as a standard.

Reports of recent dates from the collectors at Boston and Philadelphia indicate that previous to the adoption of the present cabinet of standard samples, in October, 1884, it was the practice at those ports to classify Adrianople wools as of class 3, but that since that date such wools have been uniformly classified for duty as of class 1.

From your report, dated the 20th instant, it appears that during the time that Mr. John A. Bausch served as assistant appraiser at your port (from 1867 to January, 1883) Adrianople wool was returned for duty as of class 1; that between the latter date and March, 1889, certain importations of such wools were passed as of class 3, but since the latter date all importations of Adrianople wool proper have been classified as wools of class 2.

The special reports of the appraiser at your port are to the effect that the importations in question comprised four different grades or qualities of wool, mostly from sheep raised in Turkey, near Adrianople, and having been taken from the skin in the grease is termed "Kassop bachi," or butchers' wool; that grades 1 and 2 being from sheep of Merino breed, and corresponding in character to sample No. 33 in the cabinet of standard samples, were returned for duty as wool of class 1, but as the other grades "showed marked indications of being carpet wool," they were returned for duty as of class 3.

The fact that Adrianople wools were admitted at the ports of New York, Boston, and Philadelphia as of class 3, during different periods, as above mentioned, does not establish their right to such admission then nor since. On the contrary, it would appear that a portion thereof at least was so admitted in direct contravention of the provision in the tariff acts of 1867 and 1883, respectively, for "wools of Merino blood, immediate or remote."

It is satisfactorily ascertained that the wools from Turkey, which are known as Adrianople wools, come in part from sheep of improved or distinctly Merino blood, and in part from the native or third-class races. Although these wools may be separately sold and baled for shipment at Adrianople, it is understood that they are largely purchased by dealers in Smyrna for the purpose of mixing and rebaling with their native wools for shipment as such to this country.

In this view the Department is unable to decide definitely to which particular dutiable class Adrianople wools generally, or wools imported from Smyrna, belong. The question must be determined in each instance under the long-established ruling of the Department (Synopsis 361), according to race or blood.

When, as in the present cases, such wools correspond to sample No. 33 in the Department cabinet of standard samples, or show definitely the peculiar characteristics of wools of class 1, they should be subjected to duty under paragraph 357, T. I., new; otherwise, and when exhibiting only indefinite or imperfect traits of wools from Merino, or the other improved breeds, they should be classified as wools of class 3.

Your decision, with respect to the particular importations in question, is hereby affirmed.

This decision will also apply to appeal (7897*w*) of Mr. H. Schmidt, covering an importation per *Servia*, April 15, 1889, so much of the appeal as applies to the entry per *Bothnia*, April 15, 1889, being rejected, as it appears that protest was not filed within the statutory time. (**9817.**)

TREASURY DEPARTMENT, *January 27, 1890.*

SAILOR HATS.—The Department is in receipt of your letter of the 13th instant, submitting the appeal (6554*x*) of Messrs. Balch, Price & Co. from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain hats imported by them per *Germanic*, November 16, 1889, and claimed to be dutiable at the rate of 30 per cent ad valorem, under the provision in T. I., 400, for "Bonnets, hats, and hoods for men, women, and children."

The appraiser reports that the hats in question are known as sailor hats, now much worn by young ladies, and are manufactured of wool, felted, and covered with a black varnish.

Under the Department's decision of November 6, 1889 (Synopsis 9691) as to certain miner's hats, the hats in question were properly subject to duty at the rate assessed under the provision for "hats of wool," in T. I., 363.

Your assessment of duty thereon is hereby affirmed. (**9825.**)

TREASURY DEPARTMENT, *February 4, 1890.*

LINEN LACE TIDIES.—The Department is in receipt of your letter of the 8th ultimo, submitting the appeal (5841*x*) of Messrs. Marshall Field & Co. from your assessment of duty, at the rates of 50 per cent ad valorem and 35 cents per pound and 40 per cent ad valorem, on certain tidies imported by them at your port, entry No. 9697, December 2, 1889.

The appellants claim that the tidies in question are dutiable at the rate of 30 per cent ad valorem as "linen lace," under T. I., 337, or at the rate of 35 per cent ad valorem as "manufactures of flax," under T. I., 334.

The tidies, it appears, are manufactured of wool, worsted, jute thread, tinsel, and silk, and the collector of customs at New York reports, under date of the 30th ultimo, that such goods are classified for duty at that port at the rate of 35 cents per pound and 40 per cent ad valorem under T. I., 362.

The tidies, being composed in part of wool, are properly dutiable as manufactures in part of wool, and you are hereby authorized to readjust the entry accordingly, and to take measures for collecting the balance of duty found to be due. (**9836.**)

TREASURY DEPARTMENT, *February 13, 1890.*

WORSTED LACES.—The Department is in receipt of your letter of the 4th instant, reporting further on the appeal (2968*x*) of Messrs. Rice & Frank from your assessment of duty, at the rate of 30 cents per pound and 50 per cent ad valorem, on certain worsted trimmings imported by them per *Hammonia*, September 29, 1885.

The appellants state that the goods consist of ordinary worsted laces, not used or intended for dress trimmings, and claim that they are dutiable at the rate of 35 cents per pound and 40 per cent ad valorem as "manufactures of worsted," under T. I., 363.

The appraiser reports that the goods are strips of woolen cloth, embroidered and used for trimming women's dresses and other garments, and are not the laces covered by the Department's decision (Synopsis 6311).

In view of this report the Department is of opinion that the goods are properly dutiable at the rate assessed, under the provision in T. I., 368, for "dress trimmings * * * made of wool, worsted," etc.

Your assessment of duty thereon is hereby affirmed. (**9860.**)

TREASURY DEPARTMENT, *February 18, 1890.*

"RING WASTE."—The Department has had under investigation the repeated complaints of Mr. Theodore Justice, president of the Philadelphia Wool Merchants' Association, and of other gentlemen, in relation to the classification for duty at Philadelphia and other ports of wool in the form known as "ring waste," and after a very careful examination of the matter decides as follows:

"Ring waste," so called, is a genuine product, resulting from what is known as the French system of mule spinning, in general use in England, France, and Germany. It is imported in its ordinary condition, and has not been changed for the purpose of evading duty, as inferentially charged; consequently it is, in any view of the case, exempt from the double rate of duty prescribed in paragraph 356, T. I., in certain cases.

While this "ring waste" is a product of the processes of spinning wool into yarn, it is not "waste" in the sense of the tariff act.

What that act means by the association of "woolen rags, shoddy, mungo waste, and flocks" in a single category was defined by the decision reported in Synopsis No. 5820, (*a*) as "something of little or no value," and the Department is in possession of no new facts or reasons impeaching the soundness of the principle, except the decision of September 10, 1886, reported in Synopsis 7915.

In the latter case, however, it does not appear that the attention of the Department was drawn to the fundamental consideration that the paragraph of the tariff act associating "woolen rags, shoddy, mungo waste, and flocks" in a single classification exhibits an obvious intent to deal only in that one classification with degenerate forms of woolen material, of comparative little value, and not with this form of wool, which, though resulting from a particular step in the process of woolen manufacture, is still wool of high quality, advanced to the last stage of purification prior to its manufacture into yarn, and of greater value than many grades of domestic scoured wool.

The ground upon which Synopsis 7915 stands is, that "ring waste" "can not be utilized without being broken by machinery, thus destroying the fiber of the wool, and the utility of the article for other purposes than that of waste." This statement is only partially correct, since the fiber, though somewhat depreciated by shortening, is not destroyed, and when spun in combination with longer fibered wool, produces a higher grade of yarn than could possibly be produced from "rags, shoddy,

---

a See note to No. 6884.

mungo waste, and flocks." The Department is unable, therefore, to adhere to that decision as an authority in a case where the same question is again raised.

The association of woolen rags, shoddy, mungo waste, and flocks in a single category is an old provision of tariff legislation, and antedates the time when "ring waste" became known as an article of commerce. It can not therefore be claimed that Congress had it in contemplation when providing for these comparatively valueless wool adulterants.

For the reasons herein stated, you are advised that so-called "ring waste," when found to be wool of high value, superior quality, and in a purified state, should be subjected to duty as scoured wool of its appropriate class. But when, from any cause, it is really degenerated or waste material of small value compared with scoured wool of the higher grades, it should, according to the rule of similitude, be classed as "waste" under paragraph 361, T. I., new. (**9871.**)

TREASURY DEPARTMENT, *March 10, 1890.*

EMBROIDERED WOOLEN DRESS PATTERNS.—The Department is in receipt of your letter of the 18th ultimo, submitting the appeal (9367 *x*) of Messrs. B. & A. Haas from your assessment of duty, at the rate of 35 cents per pound and 40 per cent ad valorem, on certain dress patterns, imported by them at your port on the 5th ultimo, and claimed to be dutiable at the rate of 40 cents per pound and 35 per cent ad valorem, under the provision in T. I., 366, for "wearing apparel of every description * * * composed wholly or in part of wool * * * worsted * * * made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer."

The appraiser reports that the articles consist of woolen dress goods, weighing over 4 ounces to the square yard, simply cut in lengths for dresses, overskirts, etc., and not partly manufactured, the embroidery thereon being woven into the appropriate parts of the goods.

An inspection of the sample submitted shows that the articles consist of three pieces of woolen dress goods, one plain and the others embroidered, which together constitute the material for a lady's dress, and are not made up or manufactured in any way, but are simply cut into the necessary lengths.

They are of the same character, except as to material, as the cotton robes covered by the Department's decision of August 21, 1886 (Synopsis 7711), and in view of said decision the Department is of opinion that they are properly dutiable at the rate assessed, under the provision for "women's and children's dress goods * * * weighing over 4 ounces per square yard," in T. I., 365.

Your assessment of duty thereon is hereby affirmed. (**9913.**)

TREASURY DEPARTMENT, *April 17, 1890.*

MOHAIR TOPS.—The Department is in receipt of your letter of the 12th instant, further reporting on the appeal (723 *y*) of Messrs. P. Goldsmith & Co., from your decision assessing duty, at the rate of 60 cents per pound, on certain mohair noils, "out of the ordinary condition," imported into your port via New York, on the 20th of February last, which the appellants claim to be dutiable at the rate of 20 cents per pound, as scoured Angora goat hair.

It appears from the report of the United States appraiser at your port and an inspection of samples, that the merchandise in question consists of mohair tops made from the hair of the Angora goat, the same being scoured Angora hair, costing under 30 cents per pound in the unwashed condition and being in the form of tops in their ordinary condition.

Under these circumstances, the article being scoured wool or hair of the Angora

goat, imported in other than the ordinary condition, is dutiable under the provisions of Schedule K, T. I., 356 and 358, at the rate of 60 cents per pound.

The claim of the appellants that the wool rate of duty is not applicable to this class of merchandise is not well founded, inasmuch as the provisions in said Schedule T. I., 356 and 358, include hair of the "goat and other like animals," in class two, "combing wools," so that the double rate of duty applies thereto when imported in other than the ordinary condition.

Your decision is therefore hereby affirmed.

In this connection it may be stated that this decision is in accordance with the practice prevailing at New York and elsewhere. (**9972.**)

TREASURY DEPARTMENT, *April 21, 1890.*

JIPINS RUGS.—The Department is in receipt of your letter of the 11th instant, submitting the appeal (1979 *y*) of Messrs. V. E. Archambault & Son from your assessment of duty, at the rate of 35 cents per pound and 35 per cent ad valorem, on certain jipins rugs (so called), imported by them per *Ohio*, September 18, 1889, and claimed to be dutiable at the rate of 40 per cent ad valorem under the provision for "rugs" in T. I., 378.

The appraiser reports that the goods are not rugs, and are not generally used as rugs, but are intended for and used as curtains and draperies for doors and windows, and that they are composed of wool.

The claim of the appellants is therefore rejected, and your assessment of duty thereon, under the provision in T. I., 362, for "all manufactures of wool of every description, made wholly or in part of wool," is hereby affirmed. (**9980.**)

TREASURY DEPARTMENT, *May 26, 1890.*

KALMUC PLAIN FILLING CARPET.—Referring to your letter of March 29 last, transmitting the appeal (1421 *y*) of H. Bentell from your assessment of duty, at the rate of 12 cents per square yard and 30 per cent ad valorem, on certain Kalmuc plain filling carpet, imported per *Runic*, February 6, 1890, and returned as worsted chain Venetian carpeting, dutiable under T. I., 374, I have to state that the Department has carefully considered the subject-matter of said appeal, and obtained a report thereon from the conference of appraisers recently in session at New York, and also individual reports from the appraisers at New York, Boston, and Philadelphia. With one exception, all the said reports concur in the opinion that this carpet differs from the Dutch carpeting (subject of Department's decision of September 26, 1889, Synopsis 9632, on the strength of which duty was assessed in this case) in several important particulars, and to such an extent that the classification held applicable to the Dutch carpeting can not be applied.

As deduced from said reports, the distinctions to be observed between the two carpets aforesaid are as follows: First, the warp thread in the "Kalmuc" runs regularly over and under two threads of the filling, thereby bringing to the surface the filling threads equally with the warp, while in the wool Dutch carpet the warp yarn runs over and under a single thread of filling in such a way as to raise the warp above and completely cover the filling, leaving the warp alone on the face of the carpet upon which comes the wear. Second, the warp of the Kalmuc carpeting is woolen while that of the Dutch carpeting is so-called worsted.

In view of these facts, and of the further statement in the report of the conference that this Kalmuc carpeting is not commercially known as either the worsted chain Venetian carpeting or a yarn Venetian carpet, the Department must hold that the provisions in T. I., 374, for worsted chain Venetian carpets is not applicable to "Kalmuc plain filling carpet," but that the latter being a carpet of wool, is dutiable under the specific provisions in T. I., 378, for carpets and carpetings of wool.

You are therefore authorized to reliquidate the entry at the rate provided in the last-named paragraph (40 per cent ad valorem) and to take the necessary steps for refunding the excess of duty exacted thereon. (**10038.**)

TREASURY DEPARTMENT, *June 19, 1890.*

"FOULE SERGE" NOT FLANNELS.—The Department is in receipt of your letter of the 4th instant, submitting the appeal (4735*y*) of Messrs. H. Meyer & Co. from your assessment of duty at the rate of 9 cents per square yard and 40 per cent ad valorem on certain "foule serge," imported by them per *Dania*, March 31, 1890, and claimed to be dutiable at the rate of 35 cents per pound and 40 per cent ad valorem as "flannels" under T. I., 363.

The appraiser reports that the goods are women's and children's woolen and worsted dress goods, which are not manufactured in the same manner as flannels.

Your assessment of duty thereon, under the provision in T. I., 365, for women's and children's dress goods, is therefore affirmed. (**10076.**)

TREASURY DEPARTMENT, *June 20, 1890.*

WORSTED PORTIERES.—The Department is in receipt of your letter of the 12th instant, reporting on the communication of W. & J. Sloane, dated the 5th idem, relative to the action of the appraiser at your port in returning certain "manufactures of combed wool (or worsted) and cotton," and known commercially as "portieres" or "hangings," imported by Messrs. Sloane, as dutiable under T. I., 362, by reason of the act of May 9, 1890 (see Synopsis 10020).

You state that the entry has not yet been liquidated, and express the opinion that the act cited by the appraiser applies to worsted cloths that assimilate to the woolen cloths referred to in T. I., 362, in quality, texture, and uses, and that said act does not repeal and make void the provisions of T. I., 363, for "worsted" fabrics that are not cloths nor used for the same purposes as the woolen cloths covered by paragraph, T. I., 362.

The Department concurs in this view, which accords with the view expressed in its decision of May 27, 1889 (Synopsis 9400), wherein it is stated that the term "cloths" has a technical and restricted signification, and can properly be only applied to the thicker and heavier fabrics of wool, which are so finished and close as to be adapted for use by the tailor or clothier in the manufacture of garments for men and boys. (**10078.**)

TREASURY DEPARTMENT, *September 22, 1890.*

WOOL ON THE SKIN (SHEARLINGS).—The Department duly received your letters of the 21st and 26th of June last, in relation to the appeal (5524*y*) of Mr. Richard Young from your decision assessing duty at the rate of 10 cents per pound on certain wool on the skin, imported into your port per *Canada*, on the 29th of April last, which the appellant claims to be exempt from duty because, as alleged, the skins containing the wool are commercially known as "shearlings," and the wool contained thereon is so short as to be valueless for the purpose for which the skins are imported by him, and also because the cost of removing the wool would more than offset its actual value.

After affording the appellant a personal hearing on the question, and a thorough and careful investigation of the matter, it has been ascertained that, while perhaps the skins in question may be called "shearlings," the wool thereon, which averages from 1½ to 2 pounds per skin, is of sufficient length to make it valuable when pulled from the skin for manufacturing purposes; that, upon being scoured, it would be

worth from 60 to 65 cents per pound; that wool of much shorter length is pulled from domestic skins and sold in the market as wool, and that the wool in question is certainly of sufficient length to be of commercial value as wool.

The official samples have been submitted to a number of importers and experts at Boston and elsewhere, all of whom express the opinion that the wool thereon is of sufficient length to render it valuable as wool, and to compensate the owner for the expense of removing it.

Under all the circumstances, the Department has reached the conclusion that the wool contained on these skins, which you report to consist of 7,170 pounds of class-1 wool, is liable to duty under the provisions in Schedule K, T. I., 360, and that your decision must stand affirmed.

In this connection it may be mentioned that the claim of the importer that he does not desire to use the skins for the purpose of pulling the wool therefrom, but to manufacture them into gloves, mittens, saddlery, etc., can not operate to prevent the assessment of duty on the wool as prescribed by said provisions of the statute. (**10208.**)

NEW YORK, *September 22, 1890.*

WOOL KNIT-GOODS.—We are receipt of your letter of 6th instant, transmitting protest (No. 136*a*) of Messrs. Baum & Mandel, against your action in assessing duty at the rate of 10 cents per pound and 35 per cent ad valorem on certain so-called "cotton knit-goods," imported by them per *Rhaetia*, July 7, 1890.

An inspection of the sample accompaning the invoice discovers the merchandise to be knit goods composed of wool and cotton, and an analysis furnished by the appraiser at this port returns it as containing 50 per cent of wool shoddy and 47 per cent of cotton and 3 per cent grease, color, etc.

The merchandise, which is valued at less than 30 cents per pound, has all of the appearance of wool knit goods and was evidently intended to be marketed as such, which fact, in addition to that of the wools being the chief component material, in our opinion renders your assessment of duty at 10 cents per pound and 35 per cent ad valorem, T. I., 363, correct, and your action is affirmed. (**10322—G. A. 43.**)

NEW YORK, *September 26, 1890.*

WOOL AND COTTON DRESS GOODS.—We are in receipt of your letter of August 26 last, transmitting protests of A. Murphy & Co. (86 *a*) and Schefer, Schramm & Vogel (87 *a*) against your assessment of duty, at the rate of 9 cents per square yard and 40 per cent ad valorem, on certain so-called "dress goods," imported in vessels named.

The merchandise was returned by the appraiser as "worsted dress goods, made in part of other material, *introduced for the purpose* of changing the classification of duty," and duty was accordingly assessed thereon at the rate of 9 cents per square yard and 40 per cent ad valorem, under the provisions of T. I., 365.

This paragraph of the tariff act of March 3, 1883, embraced in Schedule K, covering wool and woolens, assesses a certain amount per square yard, besides an ad valorem duty on women's and children's dress goods, coat linings, Italian cloths, and goods of like descriptions "composed in part of wool, worsted," and other named articles, and valued at not exceeding 20 cents per square yard, and other rates on like goods valued above 20 cents per square yard. It is further provided that "if [such goods are] composed wholly of wool, worsted, the hair of the alpaca, goat, or other animals, or if a mixture of them, 9 cents per square yard and 40 per centum ad valorem, but all such goods with selvedges, made wholly or in part of other materials, or with threads of other materials introduced for the purpose of changing the classification, shall be dutiable at 9 cents per square yard and 40 per cent ad valorem." A proviso follows which does not affect the case.

A chemical analysis of the goods, made by order of this board, shows that one sample contains 3·67 per cent of cotton irregularly dispersed; another sample 3·73 per cent, and a third as much as 8·64 per cent, the latter carded in with the wool. The other samples show no traces of cotton, but only of colors, mordaunt, and dressing in the usual quantities.

The contention of the importers is that the cotton was introduced in the form of fiber carded into the thread of the warp before spinning, and was not introduced in the form of a thread or for the purpose of changing the classification; that they are not composed wholly of wool with selvedges made wholly or in part of any material other than wool, introduced for the purpose of changing the classification; that, the value of the goods not being in excess of 20 cents per square yard, they are dutiable under this same paragraph at 5 cents per square yard and 35 per cent ad valorem.

It is made to appear to us, by satisfactory information, that these goods are manufactured in France and are sold in that country and other parts of the continent, as well as in America. All the goods, except the sample marked "D 3867" containing 8·64 per cent of cotton, are commercially classed ordinarily and sold as if composed wholly of wool, the samples indicating nothing to the contrary. The material of cotton is not contained in them in such appreciable quantity as to affect their value or commercial designation. Goods which do not contain any other material in an appreciable quantity than wool must be classified practically as being wholly of wool. Hence they were, in our opinion, properly assessed as if they were all wool and not mixed goods. This view renders immaterial the question as to the intent with which the small fraction of cotton was incorporated for the existence of the intent denounced by the statute would not in this case alter the classification or rates of duty.

The other goods, represented by the sample marked D 3867, stand on a different basis. Cotton is present in this merchandise in an appreciable quantity. This is apparent, from the inspection of the sample, to ordinary observation. It is readily discerned by experts and the goods are sold in the market and commercially recognized as composed of wool and cotton. There is no evidence tending to show that this cotton was added for the purpose of changing the classification. The inference of such a fraudulent purpose can not be deduced without some fact tending to support it.

The contention of the importer as to these goods is sustained. Your assessments as to the others are correct and will be affirmed. **(10326—G. A. 47.)**

NEW YORK, *October 3, 1890.*

CASHMERE GLOVES AND HOSIERY.—We are in receipt of your letter of the 16th ultimo, transmitting protest (No. 282*a*,) of Messrs. Wesendonck, Lorenz & Co., against your assessment of duty, at 35 cents per pound and 40 per cent ad valorem, on cashmere gloves and hosiery, imported by them per *Noordland*, July 7, and *Rhynland* July 12, 1890.

The importers claim that the merchandise should have been returned for duty as wearing apparel other than knit goods, under T. I., 366. An inspection of the goods discloses the fact that they are what are known as cashmere gloves and hose, or half-hose, manufactured from wool and are all knit goods, a portion of them made upon frames and others made into the piece and afterwards cut into shape and sewed together.

Paragraph 363, T. I., new, under which duty was assessed, provides for "knit goods and all goods made on knitting frames." * * * There is no limitation as to the peculiar manner in which the knitting is to be done; in fact, the words, "made on knitting frames" evidence the intent of Congress to cover both hand-knit and machine-knit goods; nor is there any qualification as to completed articles knit in contradistinction to materials knit in the piece and subsequently made into articles.

The intent of the framers of the law would seem to us to be as manifest as to the latter class of goods as to the former, for the same paragraph quoted further says "woolen and worsted yarns and all manufactures of every description," * * * indicating that every stage or form of knitting from the yarn itself to a completed article was to be included therein.

Your action in assessing duty on the merchandise, being in accordance with the above, is affirmed. (**10335—G. A. 56.**)

NEW YORK, *October 13, 1890.*

CONSTITUTIONALITY OF THE ACT OF MAY 9, 1890.—We are in receipt of your letter of the 13th ultimo, transmitting the protests described in the accompanying schedule against the assessment of duty, at the rate of 35 per cent ad valorem and 35 cents per pound, on certain so-called "worsted," imported in the vessels named.

The merchandise was returned by the appraiser as "woolen cloths under 80 cents per pound," and duty was accordingly assessed thereon at the rate above stated, under the provisions of T. I., 362.

It is claimed by the importer that the goods are manufactures composed wholly or in part of worsted, and not composed in part of wool, and should be classified accordingly under Schedule K, act of March 3, 1883.

The correctness of this contention turns on the constitutional validity of the act approved May 9, 1890, entitled "An act providing for the classification of worsted cloths as woolens." This act reads as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to classify as woolen cloths all imports of worsted cloth, whether known under the name of worsted cloth or under the name of worsteds or diagonals or otherwise.

In form this act purports to authorize and direct the Secretary of the Treasury to classify all imported *worsted* cloths as *woolen* cloths. It was never intended, as seems to be supposed, that this officer should engage in the duties of an appraiser of merchandise, by himself inspecting every invoice of such goods at every port in this country, passing judgment upon them, and formally announcing his judgment. This would be both absurd and impracticable. The law itself operates *ipso facto* to place worsted cloths in the same category with woolen cloths as to classification and rates of duty. In any event the circular issued by the Secretary of the Treasury on May 13, 1890, referring to the law in question, as contained in Treasury Decisions No. 10020, would have this effect if any official action on the part of this officer were needed to execute its manifest purpose.

The importer, however, assails this law as unconstitutional, chiefly on the following grounds:

(1) That a quorum of the House of Representatives was not present when the vote was taken on the bill.

(2) That a quorum of the House did not vote on the bill.

(3) That the act was declared by the Speaker of the House to have been passed, and was certified to have been passed, when it had not been constitutionally enacted, which was in violation of section 5 of article 1 of the Constitution of the United States.

These objections fairly present the question sought to be raised, and the power vested by Congress in this board, under the provisions of section 14 of the act of June 10, 1890, authorizing the creation of the Board of General Appraisers for the port of New York, confers on us the jurisdiction and also imposes the duty "to examine and decide the case thus submitted." The power to decide is a judicial power, and involves the authority to hear and determine by due process of law.

In view of the importance of the issue involved, and of the large number of cases before us depending on its decision, we deem it proper to give the reasons upon which the conclusion reached by us is founded, and to cite the authorities which, in our judgment, support this conclusion.

Taking judicial notice of the proceedings of the House of Representatives (as found in the Congressional Record, May 1, 1890, p. 4188) we find that the proceedings of that body disclose the following facts in taking the vote on the bill under consideration:

Yeas, 139; nays, 0; not voting, 189.

The SPEAKER: The Clerk will announce the names of members present and not voting. The Clerk read. (Here follow 75 names.)

The SPEAKER: The names of the members not voting, 75 in number, together with 138 voting in the affirmative, being 213 in all, more than a quorum necessary under the constitution to transact business, the Chair makes the following announcement of the vote: The yeas are 138, nays none, and the bill is passed.

This journal of legislative proceedings is a public record, of the contents of which we are at liberty to take judicial notice without formal proof being made. (South Ottawa *v.* Perkins, 94 U. S., 260; Cooley on Const. Lim., 163.)

The question before us is one purely of constitutional law, and must be decided from this high standpoint, entirely free from any prejudice liable to be engendered by political considerations.

The constitution of the United States (article 1, section 5) provides that "a majority of each House shall constitute a quorum to do business;" but that a smaller number may adjourn from day to day, and may be "authorized to compel the attendance of absent members," under proper penalties. It is further declared that "each House may determine the rules of its proceedings," and that "each House shall keep a journal of its proceedings," and "the yeas and nays of the members of either House, on any question, shall, at the desire of one-fifth of those present, be entered in the journal."

The journal of the House proceedings unquestionably shows a majority of all the members to be present and a majority undoubtedly constitutes a quorum to do business. The inquiry then is reduced to this: Can the House authorize its journals to be so prepared as to show a quorum to be present, althouogh many of those included to make up the quorum were silent when the vote was taken by "ayes" and "nays" and refused themselves to record their votes? In our judgment, this authority seems to follow by implication from the three powers expressly enumerated in section 5, article 1. above cited:

(1) The power of the House to keep a journal of its own proceedings, which carries with it the power to make such journal speak the truth.

(2) The power to compel the attendance of absent members, which also implies the authority to utilize their attendance after their corporal presence is enforced. It could not be intended that any member should be compelled to vote irrespective of any parliamentary rule on this subject.

(3) The power of the House to make its own rules of parliamentary proceedings. This would seem to embrace the authority to adopt any mode of ascertaining the presence of a quorum in the House within the discretion of that body not expressly or impliedly prohibited by the Constitution.

It is true that the House formerly had a rule of procedure which provided that when the roll-call disclosed the absence of a quorum the Chair could not go outside of the record to decide the presence of a quorum. (Constitutional Manual and Digest, second session, Forty-sixth Congress, 338.) Such, at any rate, seems to have been the practice of the Chair, although it was ordained by another rule that every member present during the call of the yeas and nays "shall vote on each question put from the Chair." The two rules are clearly repugnant, and the enforcement of either seems to be the disobedience of the other.

The old rule prevailed until the adoption by the House of Representatives of the Fifty-first Congress of Rule XV, the third paragraph of which reads as follows:

On the demand of any member, or at the suggestion of the Speaker, the names of members sufficient to make a quorum in the hall of the House, who do not vote, shall be noted by the Clerk, and recorded in the journal, and reported to the Speaker with the names of the members voting, and be counted and announced in determining the presence of a quorum to do business.

Whether the latter rule was formerly in force, as such, when the act of May 9, 1890, under consideration, was passed, we are not accurately advised; nor do we deem this inquiry material, as the principle of the new rule was followed by the House on the adoption of the act as shown by the journal of its proceedings above quoted. If the constitutional power existed to adopt the new rule for all cases, the like power certainly existed to adopt it for a single case. Parliamentary rules are chiefly designed for the convenient and orderly dispatch of legislative and other business, and no one will contend that the mere violation by either House of Congress of one of its own rules of procedure, not required by the fundamental law, would authorize a court to hold void a law enacted through the instrumentality of the violation of such rule.

The settled rule of construction is that constitutions, like statutes, must be construed in the light of the principles of the common law. This rule generally was that a majority of the quorum of an assembly actually present must control, although less than a quorum may vote. This is the undisputed law of both England and America in reference to corporations, public and private, including municipal corporations.

In Rex *v.* Monday, Couper, 538, Lord Mansfield said:

When the assembly are duly met, I take it to be clear that the corporate act may be done by the majority of those who once regularly constituted the meeting.

The following language is used in Willcock on Municipal Corporations, a very old work, and it is believed to correctly state the rule as to the election of corporate officers and the enactment of corporate ordinances:

After an election has been properly proposed, whoever has a majority of those who vote, the assembly being sufficient, is elected, although a majority of the entire assembly altogether abstain from voting; because their presence suffices to constitute the elective body, and if they neglect to vote it is their own fault, and shall not invalidate the act of the others, but be construed as an assent to the determination of the majority of those who do vote.

In the case of Rex *v.* Foxcraft, 2 Burr, 1017, which involved the election of a town clerk, Lord Mansfield observed that "whenever electors are present and decline to vote at all (as they have done here) they virtually acquiesce in the election made by those who do," and so the other judges held. This ruling was approved by Lord Denman, C. J., in Gosling *v.* Veley, 7 A. and E., 439, and again when the same case came before the House of Lords. The English rule has been adopted quite unanimously in this country, and is voiced in the declaration of Chancellor Kent that "a majority of the quorum may decide."

The adjudged cases fully support this view, and hold that members who are present and refuse to vote may be considered as acquiescing in the voice of the majority of those actually voting.

The authorities are lucidly reviewed in the recent case of The Rushville Gas Company *v.* The City of Rushville (121 Ind., 207), decided by the supreme court of Indiana as late as the year 1889. There the common council of the town of Rushville was composed of six members. All were present when the vote was taken on the acceptance of a contract for lighting the town. Only three voted for the resolution, which was a majority of a quorum, but not a majority of those present. It was said by the court: "The rule is that if there is a quorum present, and a majority of the quorum vote in favor of a measure, it will prevail, although an equal number should refrain from voting. It is not the majority of the whole number of members present that is required; all that is required is a majority of the number of members required to constitute a quorum." And again: "The mere presence of inactive members does not impair the right of the quorum to proceed

with the business of the body. If members present desire to defeat a measure they must vote against it, for inaction will not accomplish their purpose. Their silence is, in fact, a declaration that they consent that the majority of a quorum may act for the body of which they are members."

The same view is taken by the supreme court of Illinois in the case of Launtz *v.* The People (113 Ill., 137), decided in 1886. The charter of the city of East St. Louis gave the mayor the right to give the casting vote in case of a tie. Four of eight councilmen present voted in the affirmative for the election of an officer. The other four being present refused to vote either way on the call of "ayes" and "nays." It was held that the mayor could treat those present and not voting as opposed to those who had voted, and decide the question by voting also in the affirmative.

In State *v.* Green (37 Ohio St., 227), it was held that members of a city council present and refusing to vote when their names were called could not defeat the election of a clerk or divest the body of the power to elect. The legal effect of refusing to vote was, in other words, held to be an acquiescence in the choice of those who did vote, a quorum being present, although a quorum did not actually vote.

An analogous principle was applied to popular elections by the U. S. Supreme Court in the case of the County of Cass *v.* Johnson (95 U. S., 360), where they construed a clause in the Missouri constitution. The general assembly was prohibited by this clause from authorizing any county to loan its credit to any corporation "unless two-thirds of the qualified voters" of such county at an election duly authorized assented thereto. It was held that all qualified voters who absented themselves from such election were "presumed to assent to the expressed will of the majority of those voting, unless the law providing for the election otherwise declares." It was observed that "any other rule would be productive of the greatest inconvenience, and ought not to be adopted unless the legislative will to that effect is clearly expressed." The same rule was declared in St. Joseph Township *v.* Rogers (16 Wall, 644).

A like doctrine has been announced by the highest judicatories of several other States, whose decisions are of great authority. In fact, we find no case opposed to this view, and it is abundantly supported by the authorities. (Angell and Ames on Corp., sec. 126, 127; Grant on Corp., 71; Horr and Bemiss on Municipal and Police Ord., 42; 1 Dillon on Municipal Corp. (4th ed.), sec. 278, 282.)

To reach the conclusion that the House of Representatives of the U. S. Congress, invested as it is with the express powers to "determine the rules of its proceedings," can not constitutionally change a preexisting rule on the subject under consideration so as to declare on its journals the fact of a quorum being present, if the fact exists, we must be pointed to some clause in the Federal Constitution which curtails or limits the general power to make such rules, so as to forbid the exercise of such authority. It may be that since the foundation of the Government the House has followed another and contrary rule. This rule has been characterized as "the precedent of a hundred years." The existence of such a rule, we repeat, does not argue the constitutional disability of the same body to change or modify that rule or precedent, unless, in doing so, they violate some prohibition of the instrument from which they derive all their powers. It is not unreasonable to suppose that the framers of that instrument intended to confer the power to make a rule, which at that time was the accepted rule of parliamentary law among all English-speaking people, governing the legislative action of every municipal corporation in England and the American colonies. There would be no valid reason for conceding such a power to every petty corporation in the land and denying it at the same time to one of the legislative houses of Congress. *A fortiori* should it be conceded to the more important body. Its purpose is to prevent the unreasonable obstruction of legislative business by the mere silence of members who are present and refuse to

vote. The theory of the law is that members can not, by refusing to vote at all, accomplish more towards defeating a bill or resolution than they could by voting against it. The presence of a qualified member of the House while the legislative business is progressing must, for this reason, be construed as a participation in such business. The compulsory attendance of recusant members would be a nugatory power in the absence of the power to recognize their presence after they had been brought into the House. A refusal to vote, therefore, when present, can not lawfully operate as an abdication of membership by a member who is actually in the House. Such is deemed to be the recognized rule governing the procedure of the English Parliament. (North American Review, September, 1890, 372.)

Add to these considerations the proposition of law, now generally accepted by the courts, that no law ought to be declared unconstitutional unless, in clear cases, where the deciding court entertains no doubt as to its unconstitutionality, and we have no alternative left but to sustain the act of May 9, 1890, under consideration.

Our opinion is that the objections to the validity of the law are not well taken, and that we can not go back behind the fact of its attestation by the President of the Senate and the Speaker of the House, and its approval by the President, all of which are regular, to ascertain whether or not in its passage the House of Representatives violated any parliamentary rule or precedent, however ancient its existence.

It follows from what we have said that the assessment of duty in the several cases above mentioned were properly made, and the decision of the collector is accordingly affirmed. (**10336—G. A. 57.**)

NEW YORK, *October 17, 1890.*

DRESS GOODS.—We are in receipt of your letter of the 16th ultimo, transmitting the protests hereinafter described, against your assessment of duty, at the rate of 7 cents per square yard and 40 per cent ad valorem, on certain so-called "wool and silk goods," imported in the vessels named.

The merchandise was returned by the appraiser upon the invoices as "in part worsted dress goods," costing over 20 cents per square yard, and duty was assessed accordingly, under the provisions of T. I., 365. This paragraph of the tariff law imposes the above rates on "women's and children's dress goods, coat linings, Italian cloths, and goods of like description, composed in part of wool, worsted," and other named materials valued at above 20 cents per yard.

The special report of the assistant appraiser shows that these goods are "composed of worsted in the weft and silk in the warp, and are similar to women's and children's dress goods." Samples of the goods attached to this report present the appearance of such similarity to the eye and in texture.

It is contended that under the provisions of section 2499 of the Revised Statutes, as amended by the act of March 3, 1883, these goods should pay a duty of 50 per cent ad valorem. The clause of this section specially invoked by the appellant is the italicized part following of the above section:

SEC. 2499. There shall be levied, collected, and paid on each and every nonenumerated article which bears a similitude, either in material, texture, or the use to which it may be applied, to any article enumerated in this title as chargeable with duty the same rate of duty which is levied and charged on the enumerated article which it most resembles in any of the particulars before mentioned; and if any nonenumerated article equally resembles two or more enumerated articles on which different rates are chargeable, there shall be levied, collected, and paid on such nonenumerated article the same rate of duty as is chargeable on the article which it resembles paying the highest duty; *and on all articles manufactured from two or more materials the duty shall be assessed at the highest rates at which the component material of chief value may be chargeable.* If two or more rates of duty should be applicable to any imported article it shall be classified for duty under the highest of such rates: *Provided,* That nonenumerated articles similar in material and quality and texture, and the use to which they may be applied, to articles on the free list, and in the manufacture of which no dutiable materials are used, shall be free. (Law of Customs (Elmes), 402.)

This section has been held to apply to nonenumerated articles only, and was designed to prevent evasions of the customs laws, and to guide the classification of certain articles, not within the strict letter of the tariff law, but within its real intent and meaning. If a given article, therefore, is enumerated the section can have no application to the case. (Arthur *v.* Fox, 108 U. S., 125; Arthur *v.* Sussfeld, 96 U. S., 128.) But "to place articles among those designated as enumerated it is not necessary that they should be specially mentioned. It is sufficient that they are designated in any way to distinguish them from other articles." (Arthur *v.* Butterfield, 125 U. S., 70.)

The inquiry before us is whether the goods under consideration are "goods of like description" with "women's and children's dress goods, coat linings (or) Italian cloth," composed in part of wool or worsted, within the meaning of T. I., 365.

The Supreme Court of the United States has several times construed the phrase "of similar description," which has long appeared in the tariff laws enacted by Congress. That phrase is tantamount in meaning to "like description," and can mean nothing different. It has been held not to be a commercial phrase, nor does it involve the idea that the goods classed under it shall be in all respects the same. The similarity required is one in product, in adaptation to uses, and to its actual uses, and not merely the process by which it was produced. (Schmieder *v.* Barney, 113 U. S., 645; Greenleaf *v.* Goodrich, 101 U. S., 278.) "Women's and children's dress goods" is a phrase of commercial designation. The goods in question are substantially like such dress goods. They are, therefore, to be deemed the same and to be charged accordingly. In other words, this class of merchandise "is provided for under the name of what it resembles." (Fisk *v.* Arthur, 103 U. S., 431, 434.)

Applying these principles to the facts before us, we are of opinion that the goods in question were properly classified by the appraiser as of like description with the class of dress goods enumerated in T. I., 365, above cited.

The assessment of duty as made by you was proper, and your decision is affirmed. (**10343—G. A. 64.**)

NEW YORK, *October 23, 1890.*

CHILDREN'S WEARING APPAREL.—Your letter of the 20th ultimo is received, covering protest (No. 97 *b*) of Messrs. Zimmerman Bros. Clothing Company, against the exaction of duty, at 45 cents per pound and 40 per cent ad valorem, on certain so-called children's wearing apparel, under paragraph 367 of the act of March 3, 1883, claiming that it is dutiable, under paragraph 366, at 40 cents per pound and 35 per cent ad valorem.

It appears from the invoice that the merchandise in this case is clothing, ready-made, since it is invoiced as "boys' suits." But the clause of paragraph 367 under which it is assessed for duty is the following: "Cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel, and goods of similar description, or used for like purposes"—that is to say, "outside garments" for the appareling of women and children. It should be noted that the articles enumerated in this paragraph are all outside garments and all designed for women and children, and the general clause is, "goods of similar description, or used for like purposes." These descriptions do not comprehend the merchandise subject of appeal, either directly or by implication; certainly not if it is more definitely provided for in any other paragraph of the wool schedule. The specific enumeration of articles is found in paragraph 367, and it consists, in particular and in general, of outside garments. On the other hand, the general designation, which is very comprehensive, is found in paragraph 366, as follows: "Clothing, ready-made, and wearing apparel of every description, not specifically provided for in this act."

The merchandise in question is clearly not specifically enumerated, but falls under the general clause of paragraph 366.

The appeal is sustained, and you will reliquidate the entry in accordance therewith. (**10351—G. A. 72.**)

NEW YORK, *October 29, 1890.*

WATERPROOF GARMENTS.—We are in receipt of your several communications transmitting protests, as per annexed schedule, against your action in assessing duty, at the rates provided for wool wearing apparel and ladies' outside garments made wholly or in part of wool, on certain so-called "India-rubber fabrics," which were claimed by the importers to be dutiable at 30 per cent ad valorem under the provisions of paragraph 453, act of March 3, 1883.

The merchandise under consideration consists of completed garments manufactured from wool and rubber mixed fabrics, which fabrics, had they been imported in the piece and not made into garments, would, in our opinion, have been covered by paragraph 453, as heretofore ruled by us, under date of September 9, 1890, G. A. 19:

The word fabric, in its broader sense, would include manufactured articles of almost every description, but a narrower interpretation must be placed upon the word conformable with the intent of Congress and commercial usage. This would limit the term to a class of textile fabrics or piece goods.

The process of manufacturing the fabrics, which are provided for at one rate, into specific articles subject to duty at another rate permeates the whole tariff act. We need merely to cite the case of bonnets made from silk to exemplify this point. The wearing apparel and ladies' outside garments, the subject of the protests under consideration, are composed in part of wool; they therefore fulfill all the requirements of paragraphs 366 and 367 of the act of 1883, and inasmuch as there is no specific provision relative to garments made of rubber or of rubber fabrics, your action in returning them for duty under the paragraphs cited was, in our opinion correct, and stands affirmed. (**10389—G. A. 80.**)

NEW YORK, *November 18, 1890.*

WOOLEN ELASTIC FABRICS.—The merchandise in dispute was entered prior to October, 1890, and was, therefore, dutiable in conformity with the act of March, 1883. It consisted of an elastic fabric made from wool, cotton, and rubber, commercially known as "webbing," which the appellant claims should have been returned for duty as manufactures of rubber at 25 per cent ad valorem, under T. I., 454, or as India-rubber fabrics, under T. I., 453, at 30 per cent ad valorem, and not at 30 cents per pound and 50 per cent ad valorem, which was the rate assessed.

There are four paragraphs of the act of 1883, either of which, standing alone, would control the classification of the merchandise upon appeal, viz, those which provide for (1) manufactures wholly or in part of rubber; (2) India-rubber fabrics; (3) webbing; (4) webbing composed in part of wool.

These four paragraphs must be construed so as to harmonize all inconsistencies, which can only be done by giving the most specific provision precedence of the others.

A true interpretation of the law affecting the material would, in our opinion, be as follows:

(1) All manufactures composed wholly or in part of rubber, except India-rubber fabrics, 25 per cent ad valorem; and as the merchandise is a fabric, the first claim of the appellant is accordingly denied.

(2) All India-rubber fabrics, except webbing, 30 per cent ad valorem. The material being invoiced as webbing, and as there is no dispute relative to this point, this alternate claim of the importer is also rejected.

(3) All webbing except such as is composed in part of wool, 35 per cent ad valorem; but in the present case wool forming a constituent part of the webbing, T. I., 368, becomes the specific provision covering the same.

This ruling is in keeping with a former decision of the board, dated September 9, 1890, G. A. 19, and the assessment of duty at 30 cents per pound and 50 per cent ad valorem, being in conformity therewith, is affirmed. **(10468—G. A. 118.)**

NEW YORK, *November 21, 1890.*

DUTIABLE CHARGES—CUTTING INTO LENGTHS OF WOOLEN CLOTHS.—The appraiser reports that all the nondutiable charges were deducted by the appellants at the time of the entry, and were allowed, and that duty was assessed only upon the estimated "net market value of the goods *per se*."

The goods in question were woolen and worsted cloths, and were imported on July 30, 1890. It was held by the collector that the cost of cutting the goods into various lengths for suits, etc., was a proper element of dutiable value, and it was added as such. The contention of the appellants on this point is stated in the seventh ground of their protest, as follows: "We claim the cutting of the cloth in pieces of 10, 15, and 20 yards or other lengths to be *part of the putting* up of the goods, and (as such to be) nondutiable."

Under the provisions of section 2907, U. S. Revised Statutes, it was required, among other things, that there should be added not only the value of the coverings of imported merchandise, "but all other actual or usual charges for putting up, preparing, and packing for transportation or shipment." This section was repealed by the act of March 3, 1883, which provided that thereafter none of the charges imposed by the above section should be estimated in ascertaining market value. (Notes on Rev. Stat. U. S. (Gould *v.* Tucker), p. 619.) This clearly abolished as an element of dutiable value charges for putting up, preparing, and packing such merchandise for transportation. Is this a charge of that kind? Were the goods cut into lengths for the purpose of putting them up or preparing them for shipment, or was this additional expense incurred in order to render them more salable by adapting the goods to the market for certain uses? If it was a finishing process requiring some degree of art or skill and added anything to the market value of the goods prior to shipment, then it was an element of dutiable value. Such, we think, it was; and *prima facie* the market value of the goods was enhanced to the extent of the prime cost of the work. The practice of the customs collectors has been in accordance with this view. (Synopsis Treasury decisions 9964.) We deem it correct, and the collector's decision in this case is affirmed. **(10481 G. A.—131.)**

NEW YORK, *November 25, 1890.*

WOOL ON "CAPE" SKINS.—The appeal is indefinite, as the importer simply protests against the amount of duty exacted, without distinctly claiming free entry or specifying under what clause of the tariff or at what rate his merchandise should be classified. It is probable, however, that his intention was to claim free entry, as the protest states: "These skins are known as common Cape sheep and are covered with short, coarse hair. A small amount of wool is found on a few of the skins, but is so short and so mixed with hair that it has no commercial value except as hair."

While the protest is in itself fatally defective, it is not difficult to show on other grounds why it is not tenable.

The invoice under consideration enumerates several hundred "dry goatskins," which were classified as "raw goatskins, free," and "750 dry sheepskins." The appraiser returned for duty 530 pounds of wool, class 1, upon these sheepskins.

Confining consideration to the claim for free entry, it may be said that an examination of samples by competent experts, and a careful investigation of the case show that the wool has a commercial value of 15 cents a pound, and that it can be used in the manufacture of carpets and blankets.

In Synopsis 7147 the Department decided that the skins of common Cape goats with the hair on should be admitted free of duty under T. I., 709, "goatskins, raw." But the skins in question are not those of the common Cape goat, indeed they are from a very uncommon goat, if, as is claimed, the animal is a cross between a sheep and a goat.

The invoice enumerates the articles as sheepskins, the appellant declares that they are skins of the common Cape sheep, and the wool on the skins proves that they are from the back of sheep whether run down or bastard.

There is no provision in the tariff for the free entry of such merchandise, and the decision of the collector must, therefore, stand. **(10492—G. A. 142.)**

NEW YORK, *November 25, 1890.*

WOOL NOILS.—Duty was assessed at 30 cents per pound for wool, class 1, scoured, value in the grease under 30 cents per pound, paragraphs 356 and 357 of the act of 1883.

Appellants claim that the goods in question are noils made from carpet wool, and should be rated at 5 cents per pound as wool of the third class costing over 12 cents a pound.

The appraiser reports that "the merchandise in question consists of carded wool noils made from improved Turkish wool of Merino blood, and is in a scoured condition." In this statement he is sustained by a number of reputable wool experts of Philadelphia, and by the New York appraising officers.

It is proper to say that the question has been one of great difficulty to the board. The wool in its present condition has lost all of its distinctive features, and it is doubtful whether it can be absolutely identified as coming from any particular class. In such a case, were the evidence evenly balanced, we should give the importer the benefit of the doubt; but in this instance the preponderance of the testimony taken before us here is to the effect that the noils are from a low-grade first-class wool, and we therefore affirm the decision of the collector. **(10495—G. A. 145.)**

NEW YORK, *December 2, 1890.*

TENNIS BALLS.—The assessment of duty, at the rate of 25 per cent ad valorem, upon the so-called "gut," which consists of racquet gut strings, according with a previous decision of this board, dated November 3, 1890 (G. A. 88), is affirmed.

In relation to the assessment of duty upon the tennis balls at 35 cents per pound and 40 per cent ad valorem, under the provisions of paragraph 362, act of March 3, 1883, instead of 25 per cent ad valorem, under paragraph 454, as claimed, we are of the opinion that the claim of the importers should not be sustained, for the following reasons: The merchandise consists of rubber balls inflated with air or gas and hermetically sealed, which balls are subsequently covered with a woolen fabric. It appears from the evidence that the rubber forms the chief component material of value, but this fact is not deemed material, inasmuch as the provisions of paragraph 362 are esteemed equally as specific as those of paragraph 454. The one provides for manufactures composed wholly or in part of wool, and the other for articles composed of India rubber. Both conditions are fulfilled in the present instance. The tennis balls are made partly of wool and chiefly of India rubber. The two rates are applicable therefor, and in conformity with section 2499 of the Revised Statutes of the United States, which requires that duty must be assessed at the higher rate, we affirm the decision of the collector. **(10511.—G. A. 161.)**

NEW YORK, *December 11, 1890.*

HAT CROWNS AND BEAD ORNAMENTS.—The subject of controversy in this case is the proper classification of certain hat crowns and certain ornaments composed of beads.

Accepting as true the statement of facts made by the appraiser, the hat crowns are simply flat pieces of wool and silk, designed probably for use in the making of hats, but not even shaped. Of the bead ornaments a sample accompanies the papers. It is a leaf-shaped article 3 inches long by 1½ inches wide at the base, tapering to a point at the apex, the edges being irregular. The foundation of it is coarse cotton, which is entirely covered with small gold-colored glass beads, interspersed with a dozen larger glass beads of a pale blue color.

The appraiser returned the hat crowns for duty as wool trimmings at 30 cents per pound and 50 per cent ad valorem, under paragraph 368 of the act of March 3, 1883, and the collector so classified them, but in his special report he admits his error, and places them under paragraph 362 of said act, as a manufacture wholly or in part of wool, not specially enumerated or provided for, at 35 cents per pound and 40 per cent ad valorem. The bead ornaments were returned for duty by the appraiser at 50 per cent ad valorem, under paragraph 396 of said act, and so classified by the collector.

He admits that his return of commission for duty was erroneous. Appellants protest against the classification of both classes of articles, claiming that the hat crowns are hats, dutiable at 30 per cent ad valorem, under paragraph 400 of said act, and that the beads are dutiable as a manufacture of glass and cotton, glass chief value, at 45 per cent ad valorem, under paragraph 143 of said act.

It is submitted as an incontrovertible proposition that flat pieces of wool and silk are not hats, and hence that the contention of appellants as to this point is groundless. It is equally plain that they are not dress trimmings, or wool trimmings, within the meaning of paragraph 368 of the wool schedule; and that they are not specially provided for in that paragraph or in any other paragraph of the act of March 3, 1883. This being so, they fall under the general clause of paragraph 362, and should be classified for duty thereunder at 35 cents per pound and 40 per cent ad valorem.

The beads, it seems to us, fulfill every condition of the clause—"bead ornaments"—in paragraph 396. It is not easy to perceive the reason of appellants' contention that as between two provisions of a statute the more specific should give way to the more general. The contrary is the true rule of construction, and it must be followed in this case. Were it held that the beads or bead ornaments are not specifically provided for they would still be dutiable at 50 per cent ad valorem under the principle of the decision of the Supreme Court of the United States in Benziger *v.* Robertson, vol. 122, U. S. R., p. 211.

Commissions are not dutiable unless they contribute to make market value. According to the report of the appraiser they do not so contribute in this case, and appellants' protest in that regard is therefore sustained. **(10541—G. A. 191.)**

NEW YORK, *December 15, 1890.*

SILK AND WOOL KNIT GOODS.—The merchandise in question consists of knit underwear composed of wool and silk, and wool, cotton, and silk, upon which duty was assessed at 35 cents per pound and 40 per cent ad valorem, under paragraph 363 of the act of 1883. Against this rate of duty the importers protest, claiming that silk formed the component material of chief value in the garments, and that consequently they should have been classified as manufactures made of silk, or of which silk is the component material of chief value, and duty assessed upon them at 50 per cent ad valorem, under paragraph 383.

The goods are itemized in the invoice as "ladies' wool vests." From the evidence

submitted in the case it appears they are known commercially as "knit goods." It would, therefore, seem to us immaterial whether silk was or was not the component material of chief value.

Paragraph 362 provides for "all manufactures of wool of every description made wholly or in part of wool * * * valued at above eighty cents per pound, thirty-five cents per pound and in addition thereto forty per centum ad valorem."

Paragraph 363 reads: "Flannels, blankets, hats of wool knit goods, and all goods made on knitting-frames * * * valued at above eighty cents per pound, thirty-five cents per pound and in addition thereto forty per centum ad valorem."

So far as the component parts, silk and wool, are concerned, the term "of which silk is the component material of chief value" is no more specific than "composed in part of wool," and the rates applicable to the two materials would be equally operative, but the words "knit goods" are more descriptive of the knit underwear in question than either of the former terms and controls the classification.

The merchandise upon appeal being valued at over 80 cents per pound, the assessment of duty upon the same at 35 cents per pound and 40 per cent ad valorem was, in our opinion, correct, and is affirmed. (**10552.—G. A. 202.**)

NEW YORK, *December 16, 1890.*

WOOL KNIT CAPS.—The importers claim that the goods in dispute are "Scotch bonnets, caps, or hoods," dutiable at 30 per cent ad valorem, under the provisions of paragraph 400 of the act of March 3, 1883, or, if they are not bonnets or hoods, they are properly dutiable as such under the similitude clause of section 2499 of the Revised Statutes of the United States.

As heretofore ruled by this Board, the law of assimilation can not be applied to goods enumerated or provided for in the act either denominatively or as a material, and we shall not give consideration to this portion of the appellants' claim, but confine ourselves to the question: Does the merchandise upon appeal consist of bonnets, hats, or hoods within the meaning of the law?

The articles are described in the invoice as "Tam O'Shanters," "Brights," "Windsors," "Belmonts," etc. The testimony of the appraising officer relative to them is to the effect that they are not commercially known as bonnets or hoods, but as caps; also that they are knitted goods, manufactured from worsted.

It is true that caps, like bonnets and hoods, are head coverings, but this is not sufficient to make them dutiable at the same rate as long as they are known commercially as separate articles. So well established is this point that further argument relative thereto is not deemed necessary by us.

It is contended, however, that paragraph 400, which specified 'bonnets, hats, and hoods," *intended* to include all manner of head-wear. In the absence of any ambiguity in the language of this paragraph the intent of the framers thereof can not be considered. In our opinion, there is no ambiguity in paragraph 400. Bonnets, hats, hoods, and caps are separate and distinct articles of trade and commerce in the United States, and, caps not having been provided for by name either in paragraph 400 or elsewhere in the act, the claim of the appellants is rejected.

The assessment of duty upon them in accordance with their weight and value, under the provision in T. I., 363, for wool knit goods, is therefore affirmed. (**10562. —G. A. 212.**)

NEW YORK, *December 17, 1890.*

FELT HATS VARNISHED.—It appears from the evidence submitted, that the merchandise in dispute consists of felted wool hats varnished, valued at over 80 cents per pound, which were returned for duty at the rate of 35 cents per pound and 40

per cent ad valorem, in accordance with the provisions of paragraph 363 of the act of 1883.

The importers, in their notice of dissatisfaction, claim that, inasmuch as hats are specially enumerated and provided for in paragraph 400, duty should have been assessed upon them at 30 per cent ad valorem, in conformity with the provisions thereof.

It is true, as alleged by the appellants, that "hats" are specially provided for in paragraph 400, but we find that "hats of wool" are also provided for *eo nomine* in paragraph 363. Hats, bonnets, and hoods represent a certain class of merchandise, while the term "hats of wool" describes a particular variety of that class, and is consequently the more specific enumeration of the two. This opinion is in keeping with the long established ruling of the Treasury Department, the correctness of which we presume is not questioned in the present case. The real contention on the part of the appellants is, that the hats in dispute being varnished have lost their commercial identity as "hats of wool," and are, for all intents and purposes, subject to no special provision other than that contained in paragraph 400, and we are of the opinion that this claim of the importers is not tenable. It is not an imperative rule that hats of wool shall be so commercially known; they may be designated by the ordinary trade name "Derby" and still be more specifically enumerated as hats of wool than other hats. The varnished ones upon appeal have had their identity impaired by the varnishing process, but in substance they remain unchanged, and are still "hats of wool;" they are certainly not hats of varnish.

For the reasons stated, the assessment of duty upon them at 35 cents per pound and 40 per cent ad valorem was, in our opinion, correct, and is affirmed. (**10565.—G. A. 215.**)

NEW YORK, *December 20, 1890.*

DRESS GOODS, SILK-WARP HENRIETTAS.—The appraiser returns the goods as "silk-warp Henrietta," composed of wool or worsted in part, and silk in part, in the lower grades of which silk is the component material of chief value, and in the higher grades the wool is of chief value. They are invoiced as "dress goods, silk warps, and Henriettas," and are stated to consist of women's and children's dress goods composed of silk in the warp and worsted in the weft. The goods were classified by the collector under paragraph 365 of the tariff law of 1883, and assessed accordingly.

The only contention presented by the importer in his protest is that silk is the component material of chief value, and that the merchandise should be assessed at 50 per cent ad valorem, under paragraph 383, which levies that rate of duty on "all goods, wares, and merchandise, not specially enumerated or provided for in this act, made of silk, or of which silk is the component material of chief value."

Admitting the truth of the fact claimed as to the relative value of the silk material in these dress goods, they can not properly be classified under T. I., 383, because they are specially provided for by the more particular designation of "women's and children's dress goods * * * composed in part of wool, worsted," etc., under T. I., 365. This fact takes the goods out of the operation of the other paragraph describing them only by the chief value of the component material of silk. This view was taken by the Treasury Department as far back as October, 1883, as will appear by Synopsis of Treasury Decisions No. 5953, and the uniform customs practice has been in accordance with that ruling.

The collector's decision must be affirmed. (**10571.—G. A. 221.**)

NEW YORK, *December 20, 1890.*

WOOL KNIT GOODS, SILK CHIEF VALUE.—The goods are stated to be composed of silk and wool, and are commercially known as "ladies' vests, knit goods." They were

classified as worsted "knit goods" under paragraph 363 of the tariff act of 1883, Schedule K, relating to "wool and woolens." That paragraph enumerates "flannels, blankets, hats of wool, *knit goods*, and all goods made on knitting frames, balmorals, woolen and worsted yarns, and all manufactures of every description, composed wholly or in part of worsted, the hair of the alpaca, goat, or other animals (except such as are composed in part of wool), not specially enumerated or provided for in this act," meaning the act of March 3, 1883.

"Knit goods" by that designation are also excepted from the provision made for "wearing apparel of every description" by paragraph 366.

The contention of the importers is that silk enters into these goods as the component material of chief value, and for this reason they should be classified under paragraph 383 of said act.

Commercial designation is the first and most important inquiry, and when this fails resort must next be had to common designation. (Robertson *v.* Solomon, 130 U. S., 412.)

The phrase "knit goods," whether one of commercial or common designation, is more minute in description than a description of the material from which an article is manufactured, or of the component material of chief value. Although, therefore, the goods are made in part of silk, and silk be conceded to be the component material of chief value, they do not come within the scope of paragraph 383, because they are provided for otherwise in paragraph 363 under the more specific description "knit goods" composed in part of worsted.

The decision of the collector is affirmed. (**10572.—G. A. 222.**)

NEW YORK, *January 14, 1891.*

WOOL, SILK, AND COTTON UPHOLSTERY GOODS.—We find the merchandise in question to be, as returned by the appraiser, a manufacture of wool, silk, and cotton, commercially known as "upholstery goods," in which wool is the component of chief value, costing over 80 cents per pound.

The goods were assessed under paragraph 362 of the tariff law of 1883 at 35 cents per pound, and in addition thereto 40 per cent ad valorem.

The sole contention in the protests is that the merchandise should have been assessed, under paragraph 383, at 50 per cent ad valorem, because it is not specially provided for in said law, and that silk is the component material of chief value entering into the manufacture.

The collector's decision must stand as presumptively correct unless this contention is sustained. No evidence is produced or offered before the board, after fair opportunity given, to sustain the assertion made in the protests, and it is unsustained by any fact in the record.

The decision of the collector is accordingly affirmed in each of said cases. (**10664—G. A. 248.**)

NEW YORK, *January 14, 1891.*

SHOES OF WOOL AND LEATHER.—The merchandise in question consists of ladies' kid shoes with woolen cloth quarters. It is in evidence that the leather in them forms the component material of chief value. Inasmuch, however, as wool enters into the composition of the articles, they were returned for duty as part wool wearing apparel at 49½ cents per pound and 60 per cent ad valorem, under the provisions of paragraph 396.

The collector, in his letter of transmittal, states that upon a review of the subject, and an examination of the samples, he is convinced that the merchandise should have been rated for duty at 25 per cent ad valorem, under paragraph 456.

The term "shoes made of leather" implies shoes manufactured chiefly of leather

This condition is fulfilled in the present case, as the quantity of wool is insignificant in comparison with the leather. Having established the fact that the articles are shoes made of leather, it is not deemed necessary to consider whether they are wearing apparel or not. The claim of the appellants, therefore, that duty should have been assessed upon the merchandise at 25 per cent ad valorem, under paragraph 456, is sustained. (**10665—G A. 249.**)

NEW YORK, *January 21, 1891.*

TABLE-COVERS COMPOSED IN PART OF METAL.—The merchandise comprises table-covers composed of cotton and metal; jute, cotton, and metal; and cotton, wool, and metal, in all of which cotton is the component material of chief value, and metal an appreciable part and distinct feature. With respect to that portion of the goods, the classification of which is dependent upon that point, the importers admit that metal constitutes from 8 to 10 per cent of the value of the whole, and the articles are invoiced as "cotton and metal table-covers."

The importers claim that the appraisers erred in returning the merchandise covered by quality numbers 420 and 421 as part wool, but this allegation was negatived as to quality 420 by a statement of the shipper thereof that wool entered into their composition to an appreciable extent.

With regard to quality 421, concerning which the importers claim that it is dutiable as a manufacture of cotton at 35 per cent or 40 per cent ad valorem, we find, from the evidence, that metal formed an appreciable portion of the value of the same. This fact is fatal to the contention of the importers, and leaves the rate of duty assessed upon the goods final and conclusive against them. Duty was assessed upon the metal and cotton covers at 45 per cent ad valorem, under the provisions of paragraph 216, and upon the wool, cotton, and metal covers, valued at not over 80 cents per pound, at 35 cents per pound and 35 per cent, under paragraph 362.

The exaction of the specified rates was, in our opinion, correct, for the reason that the several terms "manufactures of cotton," "made wholly or in part of wool," and "made wholly or in part of metal," are equally specific, and, according to the provisions of section 2499, Revised Statutes, the highest rate applicable to either of the materials mentioned must be imposed upon articles manufactured from two or more of them in combination.

The decision of the collector is accordingly affirmed. (**10672—G. A. 256.**)

NEW YORK, *January 23, 1891.*

COTTON, WOOL AND SILK SHIRTINGS.—We find the facts in this case to be as reported by the surveyor. The merchandise consists of cotton, wool, and silk shirtings. They were classified under paragraph 395 of the act of October 1, 1890, at 12 cents per square yard and 50 per cent ad valorem. Appellants claim that they are entitled to entry under paragraph 394 of said act, on the ground that the warp thereof is composed wholly of vegetable material, whereas it is composed of cotton and silk, and silk is not a vegetable material.

The decision of the surveyor is sustained. (**10682—G. A. 266.**)

NEW YORK, *January 27, 1891.*

TRAVELING RUGS.—The articles subject of protest in this case are invoiced as "rugs." But the appraiser reports that they are square robes, used for protection against cold, and that they are commercially known as "lap robes." The samples submitted support this statement; one is a plush about 3½ feet wide by 5½ feet long, with plain edges; the other a checked cloth, about 4 feet wide by 6 feet long, with

plain edges on the sides and fringed ends. They were returned by the appraiser as "wool shawls," and so classified for duty by the collector as manufactures of wool, under paragraphs 362 and 363 of the act of March 3, 1883, respectively, at 35 cents per pound and 35 per cent ad valorem, and 35 cents per pound and 40 per cent ad valorem. Appellants claim that they are traveling or carriage rugs, and, indirectly, that they are dutiable at 40 per cent ad valorem under paragraph 378 of said act. No doubt they are used by travelers both in carriages and railway coaches for the protection of the person, and they are perhaps commercially and commonly known in England and on the continent of Europe as "rugs." But in this country they are commercially and commonly known as "lap robes." The rug known to the tariff seems to be an article for the floor, in the nature of a carpet. It is provided for in the act of 1883, not in the wearing apparel or the cloth paragraphs, but in one of the carpet paragraphs, 378, namely, "and mats, rugs, screens," etc.; and the same association is maintained in the present law, paragraph 408, "mats, rugs, screens, covers, hassocks," etc., "shall be subjected to the rate of duty herein imposed on carpets," etc.

The articles subject of appeal are not known as rugs to the trade and commerce of this country, nor do they appear to have been known to the legislative mind in the enactment of the law of 1883. They are therefore not specially provided for, but fall under paragraph 362 of said act, where they are placed for classification.

The decision of the collector is affirmed. (**10722—G. A. 275.**)

NEW YORK, *January 28, 1891.*

WOOL FLANNELS.—The merchandise in this case consists of flannel shirtings. It was so invoiced, and was entered as flannels. The appraiser's special report states that it was returned for duty as "woolen cloths," whereas it should have been returned as wool flannel. It was assessed for duty as "wool flannel costing over 80 cents per pound," at 35 cents per pound and 40 per cent ad valorem, under paragraph 363 of the act of March 3, 1883. Appellants protest against this classification on the ground that silk is the component material of chief value thereof, and hence that it is entitled to entry at 50 per cent ad valorem, under paragraph 383 of said act.

The merchandise is represented by samples. An expert witness describes it as follows: "It is a manufacture composed of wool, silk, and cotton, of which wool is the component material of chief value. It is commercially known and dealt in as 'flannel.' The chain is composed principally of cotton with a few threads of colored silk to form fancy stripes, and the filling is wholly of fine wool."

This testimony effectually disposes of the contention of appellants. By reason both of its commercial designation and its component materials it falls under paragraph 363.

The decision of the collector is affirmed. (**10726—G. A. 279.**)

NEW YORK, *January 28, 1891.*

COMMON GOAT HAIR.—The merchandise in question is invoiced as goat hair, and the evidence shows that it is the hair of the common goat, and is unfit for combing purposes.

The article was classified by the collector as goat hair under paragraph 377, Schedule K, of the new tariff act of October 1, 1890, and was assessed at 12 cents per pound under paragraph 384.

The importers contend that the article is free under the provisions of paragraph 604 of the free list, which reads as follows: "Hair of horse, cattle, and other animals, cleaned or uncleaned, drawn or undrawn, but unmanufactured, *not specially provided for* in this act * * *."

The whole question is, whether goat hair, as such, is specially provided for in paragraph 377, above cited.

This paragraph embraces "class 2," and the enumeration is as follows:

Leicester, Cotswold, Lincolnshire, down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, *and also* hair of the camel, *goat,* alpaca, and other like animals.

Paragraph 384 levies 12 cents per pound upon "all wools or hair of the second class," which includes those above enumerated.

Our duty is to interpret this law as it stands. If the language plainly admits of but one meaning, we have no right to adopt any other on the ground that it works a hardship on importers or manufacturers, or is otherwise prejudicial to the public good. Congress must be presumed to intend what the language of the law imports, and if the meaning of that language is plain and obvious, then there is no room for construction.

The law (in paragraph 384) unquestionably enumerates the hair of "the goat" by name. The effort is to qualify this by a proviso that such hair must be fit for combing purposes. This construction is based on the idea that the hair of the camel and alpaca is fit for such purposes. It is shown that goat hair is not of this class, but, nevertheless, it is taxed by that distinctive and specific name. To qualify the phrase by the limitation contended for would be to alter the law by making it speak an intention which does not appear on its face. Moreover, the wools described in the preceding sentence, in the same paragraph, are referred to as "combing wools." Then follows, after the copulative conjunction "also," the enumeration of "hair of the camel, goat, alpaca, and other like animals." Upon every sound rule of statutory construction the word "combing" can have no application to goat hair.

It is further said that the tariff acts of March 2, 1867, and of March 3, 1883, contained substantially the same language on this subject as the present law, and that those laws were construed to admit common goat hair free because it was not fit for combing. It is noticeable, however, that both of those acts were rendered ambiguous on this subject by prefacing paragraph 528 in the first law, and paragraph 354 in the second, by the words, "*class two, combing wools.*" Those words do not appear in the present law, having been stricken out. This amendment removes the main ground upon which the earlier Treasury decisions were based, and is therefore significant of a legislative purpose to remove the ambiguity which gave rise to the ruling made in such decisions. The Treasury rulings on the subject, moreover, were conflicting, as will be seen from Treasury decisions 7544 and 7614, made in the year 1886, when goat hair was expressly held to be dutiable as such, because it was specially enumerated. With this conflict in the rulings of the Department, we feel impelled to interpret the law to mean what it plainly says, that goat hair is dutiable at 12 cents per pound, although it is not fit for combing purposes.

We are referred to an opinion of Attorney-General Garland on this subject, dated January 15, 1887, construing paragraph 354 of the act of March 3, 1883, relating to what was there designated as "class 2, combing wools." It was assumed erroneously in that opinion that the phrase "hair of the alpaca, goat, and other like animals," meant the hair of the "*alpaca goat* and other like animals." There is no such animal recognized by zoologists in the animal kingdom as an "alpaca goat." The alpaca is a well known wool-bearing animal of the camel genus, otherwise called llama, being "a native of the lofty table lands and mountain ranges of the Andes in Peru and Chile." (Encyc. Brit., vol. 1, p. 597.) The Attorney-General's opinion was based on two ideas: (1) That class 2 embraced only "combing wools;" and (2) that the word goat was "qualified and limited by the specific word alpaca."

The new law has been amended so as to no longer leave any pretext for such an interpretation. The designation of class 2 as "combing wools" has been entirely erased, and the last clause of the paragraph now reads, "camel, goat, alpaca, and

other like animals." The word "camel" is thus inserted, and the word "goat" is transposed so as to precede "alpaca." The manifest purpose of these changes in phraseology was to remove all supposed ambiguity on the subject.

The argument that this construction will operate as an absolute prohibition against all future importations of the article is one addressed rather to Congress than to the courts.

The decision of the collector must be affirmed. **(10727—G. A. 280.)**

NEW YORK, *January 28, 1891.*

WOOL RING WASTE.—The merchandise in question is imported and known as "ring waste," or "white ring waste." It is wool of a comparatively superior quality, and was assessed at a duty of 30 cents per pound. The importation was made in April and May, 1890.

The importers contend that at the time the tariff act of March 3, 1883, was passed this ring waste was commercially known as *woolen waste*, and as such it was dutiable only at 10 cents per pound, under paragraph 361 of said act (section 2502, U. S. Rev. Stat., Schedule K.), which reads as follows: "Woolen rags, shoddy, mungo, *waste*, and flocks, 10 cents per pound."

It is enough to say that we are satisfied that the merchandise under consideration is known commercially as "woolen waste," and was so known to importers and manufacturers at the time the act of March 3, 1883, was passed.

This merchandise is shown to be identical in kind and quality with that involved in the case of Muhlhauser *v.* Gary, collector, recently tried in the U. S. circuit court for the northern district of Ohio—in fact, a portion of the same purchase and importation. The full record of that trial is before us. The court charged the jury if they were satisfied from the evidence that the merchandise was known to the commercial world as "woolen waste," it was dutiable under paragraph 361, as contended by the plaintiffs, and their verdict was for the plaintiffs in that issue. That charge was manifestly correct, and under it, as applied to this case, the appellants are entitled to a decision in their favor.

The Treasury practice had uniformly classified "ring waste," like that in question, as woolen waste, under T. I., 361, under the decision made on February 18, 1890 (synopsis 9871), when that practice was changed. It is a strong point favorable to the equity of the importers' claim in this case that they purchased this merchandise on the faith of former decisions, prior to the promulgation of the more recent ruling. (Syn. Treas. Dec. 7589.)

But we place our decision on the commercial designation of the merchandise. It is known in the trade as "woolen waste," and that fact settles the classification.

The decision of the collector is reversed, and he is instructed to reliquidate the entries pursuant to law. **(10728—G. A. 281.)**

NEW YORK, *February 4, 1891.*

WOOL-KNIT FABRICS, HOSIERY, AND UNDERWEAR.—The goods in question consist of certain knit hosiery, viz, undershirts and drawers, made on knitting frames, and of the material of wool.

The articles were classified and assessed for duty, under paragraph 396 of the tariff act of October 1, 1890, as articles of "wearing apparel" made of wool and "not specially provided for" in that act.

The importers contend that the goods are commercially known to the trade as "knit fabrics," and, being made on knitting frames, are specially provided for by that designation in paragraph 392 of said tariff act, and that they should be classiked and assessed accordingly.

Paragraph 396, under which the collector made the classification, describes the articles intended to be assessed thereunder as "clothing, ready made, and *articles of wearing apparel* of every description, made up or manufactured wholly or in part, not specially provided for in this act, * * * composed wholly or in part of wool (or) worsted."

The corresponding paragraph (T. I., 366) in the act of March 3, 1883, contained substantially the same language, but "knit goods" were in terms excepted from the provisions.

Paragraph 392 of the new tariff law, under which the importers claim the goods to fall, applies to "woolen or worsted cloths, shaws, knit fabrics, and all fabrics made on knitting machines or frames, * * * made wholly or in part of wool (or) worsted * * * not specially provided for" in that act. This paragraph is condensed in part from paragraphs 362 and 363 (tariff index) of the act of March, 1883, the former of which embraced "woolen cloths, woolen shawls, and all manufactures of wool of every description," and the latter "flannels, blankets, hats of wool, *knit goods*, and all goods made on knitting frames, * * * composed wholly or in part of worsted," etc.

The phrase, "knit fabrics" has thus been substituted for the words "knit goods."

The words "wearing apparel" are not words of technical but of popular signification. They indicate the use for which an article is designed, and to which it is ordinarily put, rather than the specific name by which it is known. They have no peculiar mercantile or commercial signification, being "a general description or genus comprehending many species." In Maillard *v.* Lawrence, 16 How. (U. S.), 251, the Supreme Court of the United States, taking this view of the law, held that a shawl was an article of wearing apparel, and dutiable as such, although many mercantile men testified that it was not so regarded in the trade. The common knowledge of the court was invoked to the contrary—that the established and popular import of the words "wearing apparel" included shawls. There is just as little doubt, it may be admitted, that the articles under consideration—knit undershirts and drawers—are wearing apparel. Such articles would be admitted as free of duty as such, under paragraph 752 of the free list, if accompanying and in use by a passenger arriving in this country from abroad, as readily as his coat, his vest, or pantaloons would be. So they would be free from execution under a law exempting "wearing apparel" from sale under legal process, as is done in most of the American States. But they are also "knit fabrics," or "fabrics made on knitting machines or frames." Are they to be construed as being "specially provided for" by this designation, so as to be excepted from the general description of "clothing, ready made, and articles of wearing apparel of every description," as used in paragraph 396? It may be argued that the amendment of the old law, which excepted "knit goods" from the words wearing apparel, made of wool or worsted, effected by striking out the exception, indicates an intention to change the law on this subject. It is answered by the importers that this exception was superfluous and unnecessary, and the silk schedule is cited, where paragraph 413 speaks of "clothing, ready made, and articles of wearing apparel of every description, *including* knit goods." Congress, it is said, found it necessary here to bring knit goods into the category of wearing apparel by so declaring in terms. As the law now stands, therefore, the apparent inference is that the lawmakers did not suppose that knit goods would have been dutiable as wearing apparel, unless it had been so provided in terms. The mere change of language in the revision of statutes by the omission of words is not significant of any change of legislative intention where such words were superfluous or might be implied by fair construction. (Endlich on Stat., secs. 378–383.)

We next inquire the meaning of the phrase "*knit fabrics*, and all fabrics made on knitting machines or frames," as used in paragraph 392. Is it more or less specific than "wearing apparel?" "*Knitting* is the art of forming looped fabrics or textures

with the use of needles and a single continuous thread." (Encyclopedia Britannica, vol. 14, p. 127.)

A *fabric* is "that which is fabricated," and to *fabricate* is "to form by art and labor; to manufacture." (Webster's Dictionary.) The phrase "knitted fabrics" seems to be one of commercial designation, and if such be the case, or the phrase be one of more minute description, it must be held to predominate over descriptive words of a generic character. Robertson *v.* Salomon, 130 U. S., 412; Arthur *v.* Lahey, 96 U. S., 112.) In Spon's Encyclopedia of Manufactures (1882), vol. 2, pp. 1186–1189, we find the history of "*knitted fabrics—hosiery*," given under that nomenclature at great length, and showing the growth of this industry for the past two centuries, and of knitting or hosiery machinery, especially in the last fifty years. The word "fabric" is uniformly used there to designate not only socks and stockings, but shirts, drawers, and various other articles produced by the art of knitting, which may be classed as hosiery as well as piece goods. Advertisements by the trade are seen every day in the public press, and are produced before us, of "wool, knit fabrics, comprising socks, stockings, gloves, mitts, jackets, Swiss ribbed vests, and drawers," etc. A number of witnesses also testified to the fact that the term under consideration is one of well-known commercial meaning in the trade. The following phrases have been held by the courts to have commercial designation among traders and importers sufficient to fix their classification specifically as belonging to a named class of merchandise: "Silk laces" and "thread laces" (Arthur *v.* Lahey, 96 U. S., 112); "Japan leather" (Morris *v.* Arthur, 95 U. S., 144); "merino goods" (Greenleaf *v.* Worthington, 26 Fed. Rep., 303).

Whether the descriptive name under consideration (paragraph 392) be a commercial designation or not, it is more narrow and specific than the common one of wearing apparel, where the *use* of the article determines the classification. It *ex vi termini* withdraws knit fabrics, or hosiery made on knitting frames or machines, as these fabrics are, of every kind from the category of clothing, ready made, or wearing apparel, by the special provision made therefor in paragraph 392 of the tariff law of October 1, 1890.

The suggestion that the words knit fabrics derives color of meaning from the antecedent word "cloths" is without force. It is equally associated with the word "shawls," which is known to be wearing apparel. The evidence before us shows that the percentage of knit fabrics which comes from abroad, outside of hosiery—such as stockings, socks, gloves, shirts, and drawers, and other wearing apparel—is comparatively insignificant.

If the question under consideration were doubtful, we would be compelled, under established rules of construction, to give the benefit of that doubt to the importers.

We accordingly hold that the merchandise in question should have been classified as contended by the importers, under paragraph 392 and not paragraph 396 of the present tariff law.

The decision of the collector is reversed, and he will proceed to reliquidate the entry in the manner and time prescribed by law. (**10736—G. A. 289***a*.)

NEW YORK, *February 4, 1891.*

SHEEPSKIN MATS.—The appraiser returned the merchandise for duty "as a manufacture of wool and flax, costing over 40 cents a pound, at 44 cents per pound and 50 per cent ad valorem, under the act of 1890, paragraph 392."

The collector states in his report: "This office does not concur in the opinion expressed by the appraiser in regard to these goods, for the reason that the wool in this case has not been manufactured, but has only been dressed in a manner similar to the dressing of other fur skins; nor does there appear to be any restriction as to

---

a Reversed by 13888—(G. A. 2041).

the character of articles manufactured of fur, provided for in T. I., 461. In order to bring the question before the honorable Board of General Appraisers this office affirms the assessment of duty" as returned by the appraiser.

Appellants claim that the rate should be 50 per cent as a wool mat, paragraph 408, or 35 per cent as a manufacture of fur, paragraph 461.

The goods in question are mats or rugs made of dressed skins with the wool on. Some of the mats are made of one skin trimmed to the proper shape, while in other cases several skins are sewed together. The wool has been dressed and in some instances dyed.

The merchandise can not be classified under paragraph 408, as that paragraph applies only to mats that are portions of carpets or carpeting.

The claim for classification as a manufacture of fur has received serious consideration in view of the fact that there is no special provision in the tariff for manufactures of sheepskins; that certain lambskins are commercially known as furs and have long been classified as furs by the Department, and as in the present case the merchandise is similar in material, quality, texture, and the use to which it may be applied to rugs made of fur.

But sheepskins are not furs, and the similitude clause can not be invoked unless there is no special provision in the tariff that would cover the merchandise in question.

Paragraph 392 provides for "all manufactures of every description made wholly or *in part* of wool." In the mats under consideration wool is the predominating element both in quantity and value. It is unnecessary to determine whether the treatment to which the wool has been subjected brings it within the category of manufactured articles. The mat itself is a completed manufactured article, and as it is made in part of wool it was properly classified under paragraph 392.

The decision of the collector is therefore affirmed. **(10745—G. A. 298.)**

NEW YORK, *February 4, 1891.*

RING WASTE.—The merchandise in this case, as shown by the report of the appraiser, and by the inspection of the same, is what is commonly called "ring waste," which is a refuse material produced in the process of spinning wool.

It was assessed for duty at 30 cents per pound, as wool of the first class, under paragraph 356 of the tariff act of March 3, 1883.

The importers contend that it is assessable only at 10 cents per pound, under paragraph 361 of said act, as "woolen * * * waste."

We considered this subject very fully in the case of Muhlhauser *v.* Gary, collector, etc., where the testimony showed that an article of precisely the same kind and quality was commercially known as "woolen waste" in the trade and among manufacturers. We there cited a decision on the same point made by the circuit court for the northern district of Ohio, between the same parties, involving merchandise of exactly like kind, in which the finding of the jury was to the same effect as that of this board.

From the samples before us we decide that the merchandise is "woolen waste," within the meaning of T. I., 361, act of March 3, 1883, and is dutiable at 10 cents per pound.

The claim of the appellant is accordingly sustained. **(10752—G. A. 305.)**

NEW YORK, *February 12, 1891.*

CARPET WOOL (ACT 1883.)—The merchandise in these cases was returned as wool, class 3, under 12 cents per pound in value, and duty was assessed thereon at the rate prescribed by paragraph 359 of the tariff act of March 3, 1883.

The importer contends that the article is entitled to free entry under paragraph

717 of said act, which reads as follows: "Hair, horse, or cattle, and *hair* of all kinds * * * not specially provided for in this act."

We infer that the contention is that the article in question is goat hair and that it is not fit for combing purposes, and for this reason it can not properly be classified under paragraph 354 of said act as the hair of the goat there enumerated.

We have held that goat hair, under the new tariff law, is not free of duty, but taxable as such under the provisions of paragraph 375 of that law. How this would be under the act of March 3, 1883, we need not decide.

The samples in these several cases have been examined by competent experts, and the testimony of these witnesses supports the conclusion that the merchandise is not goat hair, or hair of any kind whatever, but that the samples are all *wool* of an inferior grade, which comes from a deteriorated sheep, and that this class of wool is used chiefly for making carpets.

We decide on the testimony before us that the articles are *wool*, and not *hair*, and that the classification was properly made by the collector under paragraph 355 and assessed under paragraph 359, providing for wool of the third class.

The collector's decision in each case is affirmed. **(10770—G. A. 323.)**

NEW YORK, *February 13, 1891.*

WOOLEN "ROBES" OR DRESS PATTERNS.—The merchandise, as shown by the report of the appraiser, consists of certain manufactures of wool, commonly known as "robes" or "dress patterns," being plain and fancy material put together in sufficient quantities to make one dress. They were classified and assessed for duty under paragraph 362 of the tariff act of March 3, 1883, as "woolen cloths * * * and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for" in said act, and valued at above 80 cents per pound.

The only contention of the importers is that the goods ought to be classified, under paragraph 366 of said act, as "clothing, ready-made, and wearing apparel of every description, not specially enumerated or provided for in this (said) act * * * composed wholly or in part of wool (or) worsted * * * made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer."

We think it needs no argument to show that the dress patterns under consideration are not wearing apparel, but constitute only the material designed to be used for making such apparel. It is not "made up or manufactured, wholly or in part," as a process of transmutation from cloth into wearing apparel. We decide, therefore, that it is not wearing apparel or ready-made clothing, within the meaning of paragraph 366, but was properly classified as a woolen cloth, or manufacture of wool, under paragraph 362 of said tariff act of 1883.

The decision of the collector is affirmed. **(10781—G. A. 334.)**

NEW YORK, *February 14, 1891.*

SILK AND WORSTED PLUSHES.—The goods in this case are "plushes" composed, in the language of the appraiser, "of silk in the warp and worsted in the weft." They were returned by him as women's and children's dress goods, composed in part of wool, etc., and valued at above 20 cents a square yard. They were accordingly assessed for duty by the collector at 7 cents a square yard and 40 per cent ad valorem, under paragraph 365 of the act of March 3, 1883.

Appellants contend in their protest that the goods were entitled to entry, under paragraph 383 of said act, at 50 per cent ad valorem, on the ground that they are composed of silk, or that silk is the component material of chief value therein. On this issue—whether, in fact, silk is the component material of chief value in the goods subject of appeal—appellants were duly notified to appear and offer evidence in support of the verity of their contention, which they failed to do. The board

therefore finds, as matter of fact, in accordance with the return of the appraiser, that silk is not the component material of chief value in the goods, and hence, as matter of law, that the classification thereof, and assessment of duty thereon, as made by the collector, was correct, and his decision is therefore affirmed. (*See* decision of this board, G. A. 64, under date of October 17, 1890.) (**10782—G. A. 335.**)

NEW YORK, *February 17, 1891.*

COTTON AND WOOL CORSETS.—The goods in these cases are women's corsets composed of cotton and wool. The appraiser's return is in part as follows: "The merchandise consists of ladies' corsets, manufactured from black Italian cloth, which is composed of cotton and wool." He accordingly returned it as wool wearing apparel, and the collector so classified it under paragraph 396 of the act of October 1, 1890, assessing duty thereon at 49½ cents a pound and 60 per cent ad valorem.

Appellants claim, in their protest, that the merchandise was entitled to entry at 40 per cent ad valorem, under paragraph 355 of said act, as a "manufacture of cotton not specially provided for." But they admit that wool is a significant feature thereof in the following language: "Cotton being the article of chief value entering into the manufacture of same, and that the wool contained in them, or in such of them as may be partly composed of wool, is the material of least value, the proportion in value of the wool contained in the same being very small," etc.

This admission disposes of the only issue in the case, since it is not denied that corsets are "wearing apparel," nor is it denied that the corsets subject of appeal are partly composed of wool; hence the contention of appellants that they should be classified as "manufactures of cotton not specially provided for" under paragraph 355 becomes untenable. We therefore find that the facts in the record, as stated in the return of the appraiser, and in the report of the collector, are true, and that the contentions of the protest are not true in fact, or well taken in law.

The decision of the collector is affirmed. (**10792—G. A. 345.**)

NEW YORK, *February 21, 1891.*

HATS OF WOOL (ACT OF *1883.*)—The merchandise in this case consists of hats, manufactured from wool costing less than 30 cents per pound. They were assessed under paragraph 363 of the tariff act of 1883 at the rate of 10 cents per pound and 35 per cent ad valorem, that paragraph including, among other articles enumerated, "hats of wool."

It is contended that the goods should be assessed under paragraph 400 of said act, which reads as follows:

400. Bonnets, *hats*, and hoods for men, women, and children, composed of chip, grass, palm-leaf, willow, or straw, or any other vegetable substance, hair, whalebone, or other material not specially enumerated or provided for in this act, 30 per centum ad valorem.

As the hats in question are made of wool, and not of the component materials enumerated in paragraph 400, they were properly assessed under said paragraph 363.

The decision of the collector is accordingly affirmed. (**10799—G. A. 352.**)

TREASURY DEPARTMENT, *March 9, 1891.*

WOOL-KNIT UNDERWEAR.—I have to inform you that, under date of the 27th ultimo, the collector of customs at New York was advised that the Department had decided to appeal for a review of the decision of the Board of General Appraisers as to the classification of wool-knit goods. (G. A. 289, of February 4, 1891.)

You will therefore disregard said decision, and classify woolen underwear under the provisions for wearing apparel in paragraph 396, act of October 1, 1890, until the question at issue is judicially determined. (**10817.**)

NEW YORK, *February 25, 1891.*

WOOL CAPS.—The goods under consideration are felt caps, made of wool, in whole or in part. They were classified under paragraph 396 of the new tariff act of October 1, 1890, which provides for a certain duty on "clothing, ready made, and articles of wearing apparel of every description, made up or manufactured, wholly or in part, not specially provided for in this act, * * * composed wholly or in part of wool," etc.

The only contention raised by the protest is that the goods should be classified and assessed as "*hats* of wool," under the provisions of paragraph 393 of said tariff act. The ground of this insistence is that while "caps" are not enumerated in the tariff law by name, they are similar to "hats" in material and the use to which they are applied, and should be so classified, under the provisions of section 5 of the new tariff law, corresponding to section 2499 of the Revised Statutes and known as the similitude clause.

A full answer to this contention is that this section applies only to nonenumerated articles, and the description of an article as "wearing apparel" is sufficient to take it out of the operation of said section, and to place it among the enumerated articles. A cap is defined by Webster as "a part of the dress, made to cover the head." It is undoubtedly an article of wearing apparel, made of wool, within the meaning of paragraph 396 of said act, and not being any where more specifically provided for, the classification was correct. The Treasury decisions, upon which the custom-house practice is based, have always made a marked distinction between "hats" and "caps," and this difference between the two words is fully recognized in common parlance.

The decision is affirmed. (**10860—G. A. 355.**)

NEW YORK, *February 26, 1891.*

MUFFLERS.—The goods in question are stated by the appraiser to be "wool mufflers for the neck," and were returned for duty under the provisions of paragraph 396 of the new tariff act of October 1, 1890, as "wearing apparel," manufactured wholly or in part of wool.

The appellants contend that the articles are "shawls," made wholly or in part of wool, or worsted, within the meaning of paragraph 392 of said act.

A muffler is a covering for the face, a wrapper used to envelope the *head or neck.* A shawl is a loose covering for the *neck and shoulders.* It is often very difficult to distinguish one of these from the other, but the line of demarkation must necessarily be drawn in the chief use to which the given article is put. Shawls are enumerated in the tariff act *eo nomine,* mufflers are not.

The sample of the merchandise before us is of woolen or worsted, about 1 yard square, dyed black, with a border of bright-colored flowers running all around it, about 3 inches from the edge. The texture of the fabric is rather sleazy, and it is without the usual fringe found in shawls.

In our opinion its chief use is as a covering for the head or neck, not for the shoulders, and the classification of the article as wearing apparel, under paragraph 396, was correct.

The collector's decision is affirmed. (**10864—G. A. 359.**)

NEW YORK, *February 28, 1891.*

WOOL GREASE OR DEGRAS.—Duty was assessed upon certain grease at one-half of 1 cent per pound, under paragraph 316, act October 1, 1890. The appellant claims the merchandise is free of duty, under paragragh 599, as grease "such as is commonly used for stuffing or dressing leather," and that it is "sold and used only for said purpose." A sample was submitted to the United States chemist at this port for analysis, who reports that it is "wool grease," or "degras," and we so find. Although the article may be, as alleged, such as is commonly used for stuffing or dressing leather, paragraph 599 only provides for such as is not specially provided for elsewhere in the act. Wool grease and degras are provided for by name in paragraph 316. Therefore the assessment of duty thereon at one-half of 1 cent per pound was, in our opinion, correct and is affirmed. (**10878—G. A. 373.**)

NEW YORK, *March 4, 1891.*

PILE FABRICS—SLIPPER PATTERNS.—The merchandise in question is slipper patterns made from a fabric resembling Brussels carpet. The warp and filling of the body or back is of cotton and the looped warp or outer surface is of wool. The figured designs upon the patterns, which are formed by the wool warp, are colored flowers and leaves upon a black background. Duty was assessed upon the merchandise at the rate applicable to pile fabrics composed wholly or in part of wool or worsted under the provisions of paragraph 396, act of October 1, 1890.

The appellants claim the goods are not pile fabrics and that duty should have been assessed thereon at 44 cents per pound and 50 per cent ad valorem, under N. T., 392.

Pile fabrics are described in standard works as "textures woven with a loop or otherwise raised surface." Looped pile is any fabric in which the woven loop remains uncut, as in Brussels and tapestry carpets and Terry velvets. When these loops are cut in the finished texture then the material is a cut pile * * * . For ordinary loop and cut pile fabrics, two warps are required, etc.

It appears from an examination of samples of the fabrics upon appeal that they have a raised surface, which is formed by an extra warp the loops of which are cut.

The testimony we have is to the effect that these slipper patterns are known to the trade as pile fabrics, and we so find.

The assessment of duty is accordingly affirmed.—(**10895.—G. A. 390.**)

TREASURY DEPARTMENT, *April 29, 1891.*

REFUNDS ON WORSTED CLOTHS.—The Department is in receipt of your letter of the 14th instant, in which you request to be informed whether the Department has acquiesced in the decision of the court in regard to the classification of worsted cloths, and whether it has authorized a refund of duties paid in excess on such merchandise.

In reply, I have to state that, on the 31st of December last, the Department addressed a letter to the collector of customs at New York (a copy of which is herewith inclosed), authorizing him, under the mandate of the Supreme Court in the case of Magone *v.* Julius Ballin *et al.*, and on due entry of judgment, to take the necessary steps for its settlement, and also to take steps for the settlement of other similar suits now pending where the requirements of law as to protest, appeal, institution of suit, etc., have been fully complied with. (**11011.**)

[Letter above referred to.]

TREASURY DEPARTMENT, *December 31, 1890.*

SIR: The Department is in receipt of a letter from the Attorney-General, dated the 26th instant, in which he states that, in view of the decision of the United

States Supreme Court in the case of Anthony F. Seeberger, collector, etc., *v.* Bernard Cohn *et al.*, which held that "though worsted is doubtless a product of wool, in some aspects, be considered a manufacture of wool, yet, manufactures of worsted being subjected by the second paragraph (T. I., 363) to different duties from those imposed by the first paragraph (T. I., 362) on manufactures of wool, it necessarily follows that a manufacturer of worsted can not be considered as a manufacturer of wool within the meaning of this statute" (act of March 3, 1883), the writ of error in the case of Daniel Magone, collector, etc., *v.* Julius Ballin *et al.*, involving the question as to the classification of worsted diagonals, suitings, coatings, etc., (synopsis 9400), can not be sustained, and will be dismissed, inasmuch as the jury found in said case that the merchandise was exclusively of worsted.

You are therefore authorized, on due entry of judgment in said suit in the circuit court under the mandate of the Supreme Court, to take the necessary steps for its settlement, and also to take the same steps with reference to all other similar suits now pending, where the requirements of law as to protest, appeal, institution of suit, etc., have been fully complied with.

This decision will apply only to importations of worsted cloths made prior to the passage of the act of May 9, 1890 (synopsis 10020).

Respectfully, yours,

WILLIAM WINDOM,
Secretary.

COLLECTOR OF CUSTOMS, *New York.*

TREASURY DEPARTMENT, *April 30, 1891.*

WOMEN'S AND CHILDREN'S DRESS GOODS.—I transmit herewith a copy of the decision of the Supreme Court of the United States in the suit, No. 880, October term, 1890, of Daniel Magone, collector, etc., plaintiff in error *v.* Edward Luckemeyer, Carl Shefer, and William Schramm, which, it will be seen, is in favor of the contention of the defendants in error, as maintained in the lower court, that certain women's and children's dress goods weighing under 4 ounces per square yard, imported under the tariff act of March 3, 1883, composed of wool with a slight admixture, ranging from 2 to 5 per cent, of cotton, which was spun with the wool in the same yarn, were dutiable at the rate of 5 cents per square yard and 35 per cent ad valorem, under the first portion of paragraph 365 of Schedule K of the act of March 3, 1883, which covers dress goods composed *in part* of wool, worsted, hair, etc.

Upon due entry of judgment in the lower court under the mandate of the Supreme Court in said suit, you are hereby directed to take the necessary steps for its settlement by forwarding the usual certified statement for the consideration of the Department. Similar action may also be taken with regard to any other like suits now pending at your port, provided that upon investigation it is found that the requirements of laws as to protest, appeal, institution of suit, etc., were duly complied with. (**11613.**)

NEW YORK, *April 22, 1891.*

PLUSHES (1883).—We find the following facts in this case: (1) The goods are plushes composed of cotton, worsted and silk; (2) the appraiser returned them as wool flannel, costing over 80 cents a pound, and (3) the collector classified them at 35 cents a pound and 40 per cent ad valorem, under paragraph 363 of the act of March 3, 1883. Appellants protested, contending that in all the goods silk is the component material of chief value, and hence that they are entitled to entry at 50 per cent ad valorem, under paragraph 383 of said act.

A hearing was granted to said appellants, and one of them appeared with counsel and gave evidence. Interrogated as to the foreign market value of the goods he swore they cost 15 pence a yard. Asked as to the value of similar goods without the silk stripe, he said they would be worth from 9 pence to 9 pence half penny.

An examination of the invoice shows that the goods subject of appeal are in fact invoiced at from 7½ pence to 18½ pence a yard, a very large proportion of the goods falling below the value line of 15 pence.

A quantitative analysis (with samples) of the goods found among the papers shows that in numbers 1 and 4 silk, as claimed in the protest, the component material of chief value, and in numbers 2, 3, 5, and 6 worsted is the component material of chief value.

Following the rule of interpretation laid down in the Hartranft case, 135 U. S. S. C., 235, as we did in decision G. A. 261, the protest is sustained as to the goods covered by quantitative analysis report numbers 1 and 4, and the collector's decision is sustained as to the goods covered by quantitative analysis report numbers 2, 3, 5, and 6.

The entry will be reliquidated accordingly. **(11073—G. A. 516.)**

NEW YORK, *April 25, 1891.*

WORSTED DRESS GOODS.—The goods in question are textile fabrics, 3½ inches in width, composed in part of wool or worsted. They are valued at above 50 cents per pound and weigh less than 4 ounces per square yard. We find from an examination of the sample representing the merchandise that the warp is composed of cotton and silk in the proportion of about seven parts cotton and one part silk. The weft or filling is exclusively of wool or worsted and constitutes the component material of chief value of the goods. Duty was assessed at 12 cents per square yard and 50 per cent ad valorem, under paragraph 395, act of October 1, 1890. The appellants claim that the merchandise is cotton warp wool flannels and cotton warp wool dress goods, valued at above 15 cents per square yard, and that duty should have been assessed upon the same at 8 cents per square yard and 50 per cent ad valorem, under the provisions of paragraph 394 of said act. It is not contended that any portion of the merchandise is "flannels for underwear," and as its cost is above 50 cents per pound, it is excluded from paragraph by the terms thereof, and is dutiable as women's or children's dress goods or goods of similar character and description. Paragraph 394 provides for merchandise "of which the warp consists *wholly* of cotton or other vegetable material, with the remainder of the fabric composed wholly or in part of wool, worsted," etc. The warp of the merchandise in question is not composed wholly of cotton. It is composed in part of silk—in fact, the silk is of more value than the cotton—and as silk is not a vegetable substance, the claim of the importers must be rejected.

It is thought proper to invite attention to the fact that paragraph 348 imposes a higher rate of duty on cotton goods containing an admixture of silk than it is claimed by the appellants the goods in question are subject, and to which they would be liable if the warp was all cotton or other vegetable substance. The merchandise in question clearly falls within the provisions of paragraph 395, and the action of the collector is affirmed. **(11086—G. A. 529.)**

NEW YORK, *May 8, 1891.*

WORSTED MOREENS (1883).—The evidence in this case tends to show that the merchandise in question is a worsted fabric, popularly known as "moreen." It is used for covering pew cushions and for upholstery purposes generally, also in making ladies' skirts. Duty was assessed upon it at 35 cents per pound and 35 per cent ad valorem, under T. I., 362 (act March 3, 1883), as a manufacture of wool, valued at not exceeding 80 cents per pound. The appellants claim that the goods are dutiable at 18 cents per pound and 35 per cent ad valorem, under the provision in T. I., 363, for manufactures of worsted not specially provided for, valued at above 40 cents per pound and not exceeding 60 cents per pound. From an inspection of the official samples we find that the merchandise is a coarse fabric, 24 inches in width, composed of so-called "worsted" in the warp and weft, the one surface being glossy and smooth

and the other finished to resemble in appearance and to the touch mohair or poplin with a worsted design.

The analytical chemist in charge of the United States laboratory at this port reported that the merchandise was composed of combed wool known as "worsted," and the testimony of experts who were called before us was to the effect that it is not what is commonly or commercially known as a worsted cloth, but is commonly known in the trade as worsted "moreen," and it partakes of the nature of dress goods rather than cloth. We so find the facts, and hold that the article is not covered by the act of May 9, 1890, but is dutiable under T. I., 363, as claimed by the appellants. This ruling is in harmony with the decision of the Treasury Department in synopsis 10078. (**11218—G. A. 577.**)

NEW YORK, *May 9, 1891.*

CHARGES EMBALLEUR—The merchandise consists of 996 bales of third-class wool, which was entered for warehouse October 14. The wool was valued at over 13 cents per pound by the appraiser, and was assessed for duty accordingly at 50 per cent, under paragraph 386, N. T. The sum of 332 francs invoiced as "emballeur" was considered a dutiable charge in estimating the value of the wool.

The appellant protests, first, against the inclusion of 332 francs as a dutiable charge, claiming that "emballeur" is simply the opening and closing of each bale for examination subsequent to the purchase of the goods in a condition packed ready for shipment; and, second, against the liquidation of the invoice as based on the weights taken at the time of the arrival of the goods, claiming that under section 50, duty should be levied upon a basis of the weight of the merchandise at the time of its withdrawal from warehouse.

Section 19 of the act of June 10, 1890, provides that when merchandise is subjected to an ad valorem duty, the duty shall be assessed upon the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities, *in the condition* in which such merchandise is bought and sold for exportation, including all costs, charges, and expenses incident to placing the merchandise in condition packed ready for shipment to the United States. The dutiable charges are not limited by this section to such as attach to the merchandise previous to its sale and delivery. After the merchandise has been purchased in the condition in which such merchandise is bought and sold for exportation to the United States, any further expense incurred by the purchaser incident to placing it in condition packed ready for shipment is dutiable. The expense of sewing up the bales after they have been cut open for examination is an incident to placing the merchandise in condition for shipment and the importers' claim on this point can not, therefore, be sustained.

In regard to the second claim of the importer, the board is of the opinion that the phrase "duties based upon the weight of merchandise," used in section 50, does not describe goods which pay an ad valorem duty that is clearly based upon the value of goods in a foreign country and not upon their weight in the United States. The rate of duty on the merchandise in the present case is determined by the market value of wool per pound in Marseilles. This is in harmony with Department decision, synopsis 1044.

The decision of the collector is affirmed. (**11226—G. A. 585.**)

NEW YORK, *May 23, 1891.*

NUNS' VEILS.—The importers in their notice of dissatisfaction say: "We hereby protest against the assessment and payment of duty at the rate of 49½ cents per pound and 60 per cent ad valorem, charged on two items of 100 bordered nun's veilings," * * * claiming that the merchandise above mentioned is dutiable at the rate of 44 cents per pound and 50 per cent ad valorem only, under the provisions in Schedule K, paragraph 392, of the tariff act of October 1, 1890.

The appraiser reported that "the merchandise consisted of a manufacture of wool into what is known commercially as 'nuns' veils,' which are used for mourning purposes." Duty was assessed thereon, under the provisions in paragraph 396, N. T., for "articles of wearing apparel," etc.

It appears from the invoice that the merchandise covered by the protest was designated therein as 36 nuns' veils. Mr. Francis Loeb, of the appraisers' department, who examined and passed the same, testified before us that the goods in question consisted of completed wool garments having hemmed borders, and are commercially known as "nuns' veils." The importers were accorded an opportunity to be heard by the board in support of their contention. They having failed to appear and to present any evidence at the time designated, we find the facts to be as stated by the appraiser, and affirm the action of the collector. (**11244—G. A., 603.**)

TREASURY DEPARTMENT, *June 1, 1891.*

WORSTED BINDINGS AND GALLOONS.—The Department is in receipt of a letter from the United States Attorney-General, dated the 15th ultimo, in which he notifies the Department of the dismissal of the case of Robertson *v.* Weddigen, No. 85 on the docket of the Supreme Court.

The case in question, it appears, involved the classification of certain worsted bindings and galloons, woven in the loom, which were imported on December 18, 1882, and were classified as dutiable at the rate of 60 cents per pound and 50 per cent ad valorem, under the provisions in Schedule L, section 2504, Revised Statutes, for "webbings, beltings, bindings, braids, galloons, fringes, gimps, cords, cords and tassels, dress trimmings, head-nets, buttons, or barrel buttons, or buttons of other forms, for tassels or ornaments, wrought by hand or braided by machinery, made of wool, worsted, or mohair, or of which wool, worsted, or mohair is a component material."

The importers claimed that the proper rate of duty upon the goods in question was 50 cents per pound and 35 per cent ad valorem, under the clause in the same schedule beginning with the words "flannels, blankets, hats of wool," etc.

The question involved in said case was as to whether the term "wrought by hand or braided by machinery" contained in said clause qualified the various articles specified therein, or was limited to the articles last mentioned, viz, "buttons or barrel buttons, or buttons of other forms, for tassels or ornaments."

On the trial of the case, it was shown that webbing, belting, bindings, and galloons were made indiscriminately by the weaving or braiding processes, and that the terms were not distinctly-defined trade terms, but that several of the articles were known to the trade by either of two or more of these terms, and that the bindings and galloons covered by the suit were in fact woven in the loom, and the verdict supported the contention of the importers that the clause provided only for bindings and galloons which were wrought by hand or braided by machinery.

The Attorney-General states that, as the question involved was a question of fact only as to whether either webbings, bindings, or galloons were always woven and never wrought by hand or braided by machinery, it was not deemed proper to invite the attention of the court to the case.

In view of this action on the part of the Attorney-General, you are hereby authorized, on due entry of judgment in said case, to take the necessary steps for its settlement and payment, and to take the same course with respect to all other cases pending at your port in which the requirements of law as to protest, appeal, institution of suit, etc., have been fully complied with. (**1124.**)

TREASURY DEPARTMENT, *June 20, 1891.*

WOOL, CANADIAN PULLED.—Referring to your letter of March 13 last, in regard to the proper classification of Canadian pulled wool, which is obtained by first wash-

ing the wool on the pelt, and then pulling it, and to Department's reply of April 1 last, in which you were advised of the practice prevailing at New York on the importation of such wool, I have to inform you that upon further investigation the Department is of the opinion that if, upon examination the wool in question is found to have been subjected to no other cleansing process than washing on the skin with water, it is practically the same as if washed with water on the sheep's back, and should be classified as washed wool. If, however, it is found to have been subjected to other or further process of cleansing, it should be classified as scoured wool. (**11297.**)

TREASURY DEPARTMENT, *June 23, 1891.*

SORTED WOOLS OF THIRD CLASS.—Referring to previous correspondence, and more especially to your letter of the 6th ultimo, relative to the assessment of a double duty on sorted wools of the third class, I have to inform you that according to a report obtained from the collector of customs at New York, an entry of such wool was liquidated by simply doubling the amount of duty assessed on the value stated in the invoice and returned by the appraiser as correct.

This mode of reaching the amount of the double duty imposed by paragraph 383, N. T., is deemed to be both practicable and consistent with the intent of the law, and should be adopted in all similar cases, until a final adjudication of the protest filed by the importers in the above-mentioned case against the decision of the collector at New York. (**11307.**) (*a*).

NEW YORK, *May 29, 1891.*

PILE FABRICS—MOQUETTES.—One bale of moquette or velvet, imported by the protestants into the port of Boston per steamer *Michigan*, October 28, 1890, was classified for duty, under paragraph 396, N. T., as a pile fabric composed wholly or in part of wool, worsted, the hair of the goat or other animal, and duty was levied thereon at 49½ cents per pound and 60 per cent ad valorem. The protestants claim that the fabric is moquette carpeting, subject to duty at 60 cents per square yard and 40 per cent ad valorem, under paragraph 399, N. T. This article is similar to moquette carpeting in material, texture, and appearance, but woven into a fabric of very much lighter weight. It is made to order 81 inches wide for upholstery purposes, and is not used or designed to be used for carpeting.

We find that the merchandise the subject of this protest is a pile fabric composed chiefly of wool, worsted, or the hair of the goat; that it is manufactured and used for upholstery purposes, and is not carpeting.

Upon these findings we must overrule the protest. The action of the collector is affirmed.

The protest filed by same importer, No. 3740*b*, raising the same points concerning other moquettes, does not appear to have been filed within ten days after liquidation and as required by section 14 of the act of June 10, 1890, and can not therefore be entertained. (**11345—G. A., 628.**)

NEW YORK, *June 2, 1891.*

SHEEPSKINS WITH THE WOOL ON.—The protestants imported into the port of New York, March 16, 1891, by the *Etruria*, sundry bales of cape sheepskins, and the collector levied duty upon the quantity of wool on the skins and at a value ascertained and returned by the appraiser. The protestants claim in their protest that there was substantially nothing but hair upon the skins and that the value thereof was much less than the amount returned. The objection to the value as returned by the appraising officer involves a question of reappraisement, and as no irregularity is alleged, the subject is only cognizable on appeal for a reappraisement.

---

a Modified by No. 12463.

An inspection of sample skins and the testimony of numerous witnesses proves conclusively that the fleece upon the skins is a mixture of wool and hair, which when pulled or sheared has a known market value and is classed by dealers as a low medium to a coarse quality. It also appears that the estimate of quantity was fairly made with a liberal allowance in the importer's favor. We find that the appraising officer ascertained the quantity of wool on the skins above mentioned to be 1,000 pounds and the value thereof to be less than 13 cents per pound, and that said quantity and value was ascertained by him in accordance with the rules prescribed by the Secretary of the Treasury, and that the same were correctly ascertained.

We also find that the collector classified said wool as of the third class and valued at less than 13 cents per pound, levying duty thereon at 32 per cent ad valorem, under the provisions of paragraph 385, N. T. Upon these findings, we hold that the contentions in this protest can not be sustained.

The protest is overruled and the action of the collector is affirmed. **(11357—G. A., 640.)**

NEW YORK, *June 11, 1891.*

ENDLESS FELTS AND JACKETS FOR PRINTING MACHINES.—In the present case the merchandise is invoiced as jackets, jacketing, and press felt, upon which the collector assessed duty at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, act of October 1, 1890.

The importers claim the goods are blankets, and, as such, are provided for under paragraph 393 of the said act.

The appraiser in his report to the collector says:

The merchandise in question consists of so-called jackets and jacketing, woven fabrics of wool, cylindriform, in usual diameters of 14 and 18 inches. The use of the article is for covering the so-called "couch rolls" or "metallic rollers" connected with the paper-making machine, through which pulp is passed for purposes of forcing out the water and rendering it compact. The jackets are completed articles, made in suitable sizes for the rolls. The jacketing is similarly made, but in lengths of 50 to 70 feet, to be sold in lengths cut to fit the machine.

Samples representing the merchandise in question show the jackets and jacketing to be a woven fabric of wool, about one-fourth of an inch thick, and of great density. The press felt is also a woven fabric of wool, but of less thickness and more flexibility than the jackets or jacketing.

At a hearing accorded the protestant importers of similar goods appeared before us and testified relative to the trade designation and use of the articles in question. From the testimony we find the following facts: The articles invoiced as jackets and jacketing are cylindriform woven fabrics composed of wool. They are not known commercially as blankets, but interchangeably as jackets, jacketing, couch-roll covers, and endless felts.

The goods invoiced as "press felt" are known to the trade under the names of belts, machine blankets, press blankets, and press felts. They are also of a cylindrical form, and are woven fabrics composed of wool.

Upon this finding, we hold the merchandise was properly classified as a manufacture of wool not specially provided for, and returned for duty under paragraph 392, N. T.

The term "blankets," used in paragraph 393, N. T., is descriptive of a particular class of goods, well known in trade and commerce. The merchandise in question, a portion of which is designated as machine blankets and press blankets, does not, in our opinion, fall within the particular class of goods referred to in paragraph 393.

We have reached this conclusion from the evidence of expert witnesses and a careful consideration of former tariff legislation. In the act of 1883, T. I., 363, "flannels, *blankets*, hats of wool, knit goods," etc., were provided for at specified rates of duty, and in T. I., 379, "endless belts or felts for paper or printing machines" were subjected to another rate of duty. The same distinction between blankets of wool and

goods like those in question existed in tariff acts prior to that of 1883, as will be seen by reference to sections 243 and 244, T. I., old. The act of October 1, 1890, provided for blankets of wool, but made no separate provision for belts or felts for paper or printing machines. It follows that the goods in question, which are known as belts or felts for paper or printing machines, not being provided for by name, fall under paragraph 392, N. T., as manufactures of wool not specially provided for.

The action of the collector is affirmed. **(11381—G. A. 664.)**

NEW YORK, *June 11, 1891.*

WOOL ON ANGORA GOATSKINS.—The importers in these cases were notified to appear before this Board on June 5 and show cause, if any, why the decision of the collector should not be sustained. The appellants, Keen, Sutterlee & Co., failed to appear. The appellant in the other two cases, E. R. Lazarus, appeared in person, but offered no evidence other than that found in the papers in the cause.

We find the following facts from the returns of the appraiser and from an inspection of the samples of merchandise:

(1) That the goods consist of Angora goatskins, with the hair or wool thereon, valued at 12 cents per pound.

(2) That the quantity and value of this hair or wool was ascertained by the appraiser under the rules prescribed for this purpose by the Secretary of the Treasury.

The merchandise was returned for duty as belonging to wools of the second class, under "Schedule K," paragraph 377, and was assessed accordingly, under paragraph 384 of the new tariff act. (Synopsis Treasury Decisions 7206.)

It is provided by paragraph 387 of said act that "wools on the skin shall pay the same rate as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe."

A further claim made by the protest, also, is that there is no wool on the skins and that "the hair in the entire lot does not amount to more than 1,500 to 2,000 pounds."

The main contention in the case is that the goods are free, under paragraph 605, which puts in the free list * * * "*Angora goatskins, raw, without the wool,* unmanufactured, and skins, except sheepskins, with the wool on."

The phrase "wools on the skin," as used in paragraph 387, is a generic one, and must be construed in connection with paragraph 605 of the free list, and the other paragraphs *in pari materia* found in "Schedule K, wool and manufactures of wool." The skin of the Angora goat often contains both wool and hair, the line of demarkation between which the best experts find it difficult to pronounce or define. The word "wools" was intended, in our judgment, to include any mixture of wool and hair found on Angora goatskins, both being liable to the same duty and it being impracticable to separate them when in this condition in making an estimate of the relative quantity of each.

The question as to the quantity of wool or hair in the skins under consideration is not one of classification or rate of duty, such as may be reviewed by us in protest, but rather of valuation, to be determined by reappraisement, in accordance with the requirements of section 13 of the customs administrative bill, approved June 10, 1890.

The decision of the collector is in accordance with these views and is affirmed. **(11385—G. A. 668.)**

NEW YORK, *June 13, 1891.*

WORSTED DRESS GOODS (1883).—We find the following conclusions of fact in these cases:

(1) That the goods covered by the several invoices are commercially known as "women's and children's dress goods," and are composed in part of wool or worsted, and were imported prior to October 1, 1890.

(2) That said goods have no selvages or threads made of cotton or any other material than wool or worsted.

(3) That said goods contain a percentage of cotton, varying from 2·30 to 5·78 per cent, which was carded in with the wool from which the yarn composing the warp of the goods was spun. Exhibit A, attached to the testimony of the witness, James H. Stebbins, jr., is found to be a correct statement of the amount of cotton, ascertained by chemical analysis, to be found in each of the samples furnished, which samples correctly represent the quality and kind of goods under consideration.

(4) That the value of said goods per square yard, in each case, is correctly found by the local appraiser, and that they weigh less than 4 ounces to the square yard.

Under this state of facts, the cases are brought within the ruling of the United States Supreme Court in the "woolen dress goods" cases recently decided, Seeberger *v.* Farwell, 11 Sup. Ct. Rep., 650, and Magone *v.* Luckemeyer, *Id.*, 651. The goods under consideration are of the same kind as those involved in the cases cited. On the authority of those decisions we hold that the goods are "composed in part" of wool or worsted, and in part of cotton, and are dutiable as follows: (1) Those valued at not exceeding 20 cents per square yard, at 5 cents per square yard, and, in addition thereto, 35 per cent ad valorem; and (2) those valued at above 20 cents per square yard, 7 cents per square yard and 40 per cent ad valorem. (Tariff act 1883, paragraph 365.)

The decision of the collector in each case is reversed, and he is authorized to reliquidate the duties accordingly.

As to the importations covered by protests numbered 187*a* and 188*a*, it is made to appear that the goods contain silk as the component material of chief value. They therefore fall within the purview of the decision of the Supreme Court in Hartranft *v.* Meyer, 135 U. S., 237, and the protests are sustained accordingly. **(11391—G. A., 674.)**

NEW YORK, *June 19, 1891.*

PULLED WOOL DUTIABLE AS SCOURED.—The report of the appraiser states—and we so find—that the importation under consideration, which is invoiced as "10 bales Australian pulled wool," is Montevideo merino wool, and falls under "class 1" (paragraph 376) of the wool schedule of the new tariff act. The duty on such wools, imported in ordinary or unwashed condition, is fixed at 11 cents per pound (paragraph 384).

Paragraph 381 of said act provides, however, that "the duty on wools of the first class which shall be imported *washed* shall be *twice* the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported *scoured* shall be *three* times the duty to which they would be if imported unwashed."

A similar provision occurred in paragraph 356 of the tariff act of 1883. The purpose of these clauses, as observed by the United States Supreme Court in Arthur *v.* Paster (109 U. S., 139), was "to vary the amount of duty on wools according to the degree to which a given quantity has been freed, by process of cleansing, from the dirt and foreign matter with which in its unwashed state it is usually found."

The act of 1883 did not undertake to define washed and scoured wool, but left these terms open for construction according to the trade designations. The act of October 1, 1890, does define these terms generally in paragraph 382 as follows:

> Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. *Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.*

If this wool is washed, and such cleansing is done "in any other manner than on the sheep's back," the law declares it "shall be considered scoured wool."

The importers make the following admission in their protest: "We claim that this wool is obtained by pulling from the skins or pelts of slaughtered sheep. Said pelts are simply *spouted with cold water*, so far as any cleansing process relating to the wool is concerned." Their contention is that the legal rate of duty is 22 cents per pound, as a *washed* wool.

Assuming the above admission to be true, the cleansing was clearly done otherwise than on the sheep's back.

Hence it must be classified, under said paragraph 382, as "*scoured* wool," and not as washed, and is subject to three times the rate prescribed for unwashed wool of the first class.

The collector correctly assessed the article at 33 cents, and his decision is affirmed. (**11400—G. A. 683.**)

TREASURY DEPARTMENT, *July 1, 1891.*

SKIRTED WOOLS.—Referring to a paragraph in a letter addressed by yourself and the Hon. Columbus Delano to the Department, under date of the 1st ultimo, in which you refer to the provision for skirted wools, in paragraph 383, act of October 1, 1890, I have to inform you that the Department, upon inquiry, is advised by the collectors of customs at New York, Philadelphia, and Boston that the following wools, besides Australian wools, were imported skirted prior to the passage of the act of October 1, 1890, viz: Cape of Good Hope wool; French wool; German wool; Russian wool; Spanish wool; Saxony wool; Silesia wool; Montevideo wool; Buenos Ayres wool; Damascus wool; Smyrna wool; Aleppo wool; Angora wool; Salonica wool; alpaca, Adrianople, Egyptian, Turkey, and Russian Donskoi combing wools; that English and Irish wools were sold skirted or unskirted at the option of the purchaser, and that Syrian wools were sometimes imported skirted. (**11429.**)

TREASURY DEPARTMENT, *July 16, 1891.*

SAMPLES OF WOOL USED IN A SUIT.—The Department is in receipt of your letter of the 10th instant, in which you state that George W. Patton, the defendant in the case of the United States *v.* George W. Patton & Co., against whom a verdict was recovered at the last session of the district court for the eastern district of Pennsylvania for $10,887.26, being the amount of duty assessed on two importations of alleged wool waste, has requested that two sample bales held at the appraiser's store in the city of New York, one ex *Wyoming* and one ex *Spain*, may be returned to him so that the same may be used or sold.

You report that Mr. Patton has appealed the case to the Supreme Court, where it is now pending, and has given ample security for the payment of the whole amount of the Government's claim, with costs of suit, and you state that you see no reason why his request should not be granted, as you have in your possession two adequate samples of the importation which were recognized in the suit which was lately tried, and that as the case will not probably be determined for three or four years, the two sample bales at the end of that time would be of no value to him or any one else.

In reply I have to inform you that, in view of the facts stated by you, the Department sees no objection to the delivery of said bales to their owner, and as they appear to be held by the collector at New York subject to your orders, in view of the pending suit, the necessary instructions should be given by you to that officer (**11467.**)

NEW YORK, *July 7, 1891.*

DEGRAS OR BROWN WOOL GREASE.—The merchandise is invoiced as "60 casks of wool grease," and was imported October 21, 1861. It was returned by the wool

appraiser as "brown wool grease," and was classified by the collector and assessed under paragraph 316 of the new tariff act, the last clause of which reads as follows: "Wool grease including that known commercially as *degras* or brown wool grease, one-half of 1 cent per pound."

The protestants contend that the article is free, under paragraph 599 of the free list, which reads as follows:

599. Grease and oils, such as are commonly used in soap making or in wire drawing, or for stuffing or dressing leather, and which are fit only for such uses, not specially provided for in this act.

The importers in this case were cited to appear on a day fixed for a hearing of the cause, but made default, and came not by attorney or in person.

We have, however, taken the testimony of one witness, who deals in the article under consideration, and he testifies that the sample shown him is, without doubt, "degras" or "brown wool grease," and we so find, in accordance with the return made by the local appraiser. It was formerly held to be classifiable under paragraph 437 of the tariff act of 1883 as "grease, not specially enumerated or provided for, in that act, and was assessed at 10 per cent ad valorem. (Miller *v.* Seeberger, 44 Fed. Rep., 261.) Under the present law it is specially enumerated by name in paragraph 316, and is therefore excluded from the class of "grease" made free in paragraph 599, although used for the purposes there stated. (G. A. 373.)

The collector's decision is affirmed. (**11561—G. A. 736.**)

NEW YORK, *July 25, 1891.*

SILK AND WOOL UPHOLSTERY GOODS.—The merchandise covered by the protest in the present case was returned by the appraiser as manufactures of wool costing above 80 cents per pound. Duty was assessed upon the same at 35 cents per pound and 40 per cent ad valorem, in accordance with the appropriate provision of T. I., new 362. The importer claims that "the merchandise is upholstery goods, composed of silk and wool and silk and worsted, respectively, in both of which fabrics silk is the component material of chief value."

The board submitted samples of the merchandise to the chemist in charge of the United States laboratory at this port, for quantitative analysis and report as to the relative value of the several component parts thereof.

This officer, after recording the result of his analysis, says: "The silk in both samples is of excellent quality, while the wool belongs to a medium grade. If the question of the component of chief value is the object of the analysis, it is evident that silk in the quantity found in each sample constitutes the most expensive material."

We find as facts—

(1) That the merchandise is composed of silk and wool, and silk, wool, and cooton, respectively.

(2) That the goods are manufactures of silk or of which silk is the component material of chief value, and we hold that they are more specifically enumerated and provided for in paragraph 383 (Heyl's Compilation) than elsewhere in the act of March 3, 1883.

The protest is sustained. (**11602—G. A. 798.**)

NEW YORK, *July 29, 1891.*

ASTRACHANS.—The merchandise was imported under the tariff act of 1883, and is described in the invoice as gray and black astrachans, which we find to be the proper commercial designation of the goods.

They were classified, under paragraph 362 of the act of 1883, as woolen cloth valued at not exceeding 80 cents per pound, and assessed for duty at 35 cents per pound

and 35 per centum ad valorem, the collector deciding that they were covered by the act of May 9, 1890.

The collector reports that samples of similar goods were submitted to the conference of local appraisers in October, 1889, who were unanimously of the opinion that the proper classification fell under paragraph 363.

An indorsement on the protest from the collector's office calls for a special report in writing descriptive of the goods, but no such report and no samples are forwarded.

The appraiser, on the invoice, described the importation as "wool cloth," and the examiner, who had the goods before him, was of opinion that the astrachan cloth referred to was not removed from the category of worsted, adding that astrachans are generally used for trimming purposes and for ladies' and children's jackets, while the wool cloths are used in the manufacture of men's and boys' clothing.

The importers claim that the goods are improperly classified as woolen cloth and should be assessed as manufactures of worsted, under paragraph 363.

The Department held, June 20, 1890, in the case where the force of the classifying act of May 9, 1890, was invoked by the appraiser in regard to certain "portieres" or "hangings," that the term "cloths" has a technical and restricted signification, and can be properly applied only to the thicker and heavier fabrics of wool, which are so finished and close as to be adapted for use by the tailor or clothier in the manufacture of garments for men or boys. (Synopsis 10078.)

In a case before this board in May last it was held that a worsted fabric known as "moreens," while composed of combed wool known as worsted, is not what is commercially known as a worsted cloth, but that it partakes of the nature of dress goods rather than cloth and has a popular and fixed designation.

We hold that the act of May 9, 1890, was intended to apply to worsted cloths that assimilate to woolen cloths in quality, texture, and uses, and that astrachans do not so assimilate. They have specific designation and they are not removed from paragraph 363, because they are not recognized as cloths nor are they used for the same purposes as the woolen cloths referred to in paragraph 362.

The protest is sustained and a reliquidation is authorized. **(11678—G. A. 783.)**

NEW YORK, *August 6, 1891.*

WATER-PROOF FABRICS.—The special report of the appraiser relative to the goods in question is as follows:

The merchandise consists in part of plaid cotton cloth heavily proofed with a preparation of India rubber, cotton chief value, and two different patterns of plaid cotton cloth stuck together with prepared India rubber, making what is known as double texture. In this fabric cotton is also the component material of chief value. Both of the above-described textiles were returned as manufactures of cotton not specially provided for, under paragraph 355, act of October 1, 1890, in accordance with the principles contained in the decision of the United States circuit court in the case of Schneider *v.* Arthur (Synopsis 4565, June 7, 1880). The importer claims that India rubber is the component of chief value in this merchandise. In his computation he has evidently omitted to take into account the adulterations of the India rubber and the chemicals used to soften it so that it could be applied to the cotton cloth. He has omitted to distribute the cost of the labor employed in applying this preparation of India rubber between the components. Adding to the cotton cloth the pro rata proportion of cost of such labor would certainly, to my mind, make cotton chief value. This merchandise resembles cotton cloth more than it does manufacture of India rubber. If it resembles equally cotton cloth and manufacture of India rubber, then the assessment should be at the higher or cotton rate, as made; *see* section 5, act of October 1, 1890.

The balance of the merchandise consisted in part of woolen cloth and cotton cloth pasted together with India-rubber preparation, so as to make a double-texture cloth and of two qualities of woolen cloth similarly joined together, which were returned for duty as woolen cloth, under paragraph 392, act of October 1, 1890. Under this paragraph they are more specifically enumerated than under paragraph 460, inasmuch as India rubber is *not* the component material of chief value. This merchandise is used in the manufacture of water-proof garments, and attention is directed to

the proviso to paragraph 349 for cotton and India-rubber clothing. I would also invite attention to the provision for "water-proof cloth," contained in paragraph 369. The commercial designation of this merchandise is variously single textures, double textures, "Macintosh cloth," and sometimes "water-proof cloth."

The report of the appraiser is given in full, as it contains a description of the merchandise and all the points contended for by the Government, relative to the dutiable character thereof.

The importer claims that the fabrics contained in parcels 71 and 72, as designated in the invoice, are composed of India rubber and cotton, of which materials India rubber is the greater in value, and that the goods contained in parcels 73 and 74 are composed of India rubber, cotton, and wool, in the first of which fabrics India rubber is the component material of chief value, and in the other, although while admitting that wool is of more value than India rubber or cotton, it is held that, inasmuch as India rubber is the significant feature of the goods, this substance controls the classification thereof. Based upon the above claim, it is contended by the appellant that duty should have been assessed upon all of the merchandise at 30 per cent ad valorem, under paragraph 460, N. T. A representative of the manufacturer of the goods in question appeared before the board and submitted a sworn statement as to the relative value of the different materials entering into the fabrication. Manufacturers of domestic India-rubber fabrics were also present and testified as to the value of crude India rubber. A quantitative analysis of samples representing the merchandise was, at our request, made by Dr. Baker, connected with the United States laboratory at New York. Based upon this analysis, the amount of pure India rubber found to be contained in the several kinds and qualities of merchandise, when valued at the price per pound fixed by the domestic manufacturers referred to, tends to confirm the statement of the maker of the goods.

We therefore find as facts—

That the fabrics contained in parcels 71 and 72 are composed of India rubber and cotton, of which materials India rubber is the component of chief value. That the merchandise contained in parcel 73 is composed of India rubber, cotton, and wool, and that India rubber forms the component material of chief value thereof; and that the goods contained in parcel 74 are composed of India rubber, cotton, and wool, and that in these fabrics the wool constitutes the component material of chief value. We further find that the goods are India-rubber fabrics, and are not the water-proof cloth provided for in paragraph 369. We hold that the portion of the merchandise of which India rubber is the component material of chief value is more specifically provided for in paragraph 460, N. T., than elsewhere in the act. The protest is accordingly sustained as to the goods contained in parcels 71, 72, and 73, and the action of the collector is affirmed as to the goods contained in parcel 74, of which wool constitutes the component material of chief value. **(11679—G. A. 504.)**

NEW YORK, *August 26, 1891.*

SCAPULARIES PART WOOL.—* * * Concerning the remainder of the merchandise, an inspection of a sample thereof shows it to be composed of ten pieces of flannel of wool, each piece 2½ inches long and 2 inches wide. There is a division of these pieces into two sets, each set containing five pieces, which are stitched together upon the upper edge thereof, and the sets joined together by two pieces of red woolen braid, the whole forming religious articles of devotion known as a pair of scapularies. Upon the outer surface of one portion of the scapularies there is stitched a representation of our Saviour's passion, and on the other the sacred heart of Christ, both representations printed on cotton cloth.

In G. A. 425 the board held that similar representations printed upon cotton cloth separately imported were dutiable as printed matter. In the present case, however, the printed matter is a portion of a completed article and is merely an incidental feature thereof.

We find the scapularies are manufactures made wholly or in part of wool. The claim of the importers that duty should have been assessed upon this portion of the merchandise at 25 per cent ad valorem, under paragraph 423, N. T., is overruled, and the action of the collector relative thereto affirmed. **(11842—G. A. 833.)**

NEW YORK, *August 26, 1891.*

RUSSIAN WOOL—PAPER RUBLES OF RUSSIA.—We find as facts in the present case that on or about the 26th day of September, 1890, there were shipped from Moscow, Russia, 115 bales of class 3 wool, invoiced at 5½ paper rubles per pood. Entry was made at the port of Philadelphia on the 20th day of October, 1890.

Attached to the invoice is a certificate of the U. S. vice-consul at Moscow to the effect that "the true market value of the currency, paper rubles of Russia, in which currency the invoice of merchandise in question is made out, is 60.15 cents estimated in United States gold dollars, as indicated by the latest quotations at St. Petersburg, of sight draft on London, viz, 29⅜½*d.* sterling."

The action of the collector is set forth in the following official report to the board:

The assessment of duty upon the merchandise at 32 per cent ad valorem, as provided in paragraph 385, act of October 1, 1890, for class 3 wool costing less than 13 cents per pound, was based upon a valuation of $0.68 per Russian ruble, in accordance with Department's ruling of October 1, 1890. (Synopsis 10263.)

The return made on the invoice by the appraiser was "value correct to 9.18 cents per pound," and in a special report to the collector he wrote, "I beg to say that the value of the wool as returned by this office was based on its value at the time of shipment, and not at the time of arrival, which value was based upon the declaration of the consul that the ruble was worth 60.15 cents." The appellants claim that the amount of duties chargeable upon the merchandise should have been estimated in accordance with the appraiser's return.

The points at issue in the present case are:

(1) What was the equivalent in the gold dollars of the United States of the paper ruble of Russia?

(2) Should the value of the paper ruble have been estimated at the time of shipment of the merchandise or at the date of entry thereof?

As to the second point, we hold that the local appraiser exhausted all the powers vested in him by law when, in addition to an advisory classification, he made return on the invoice as to the quantity and character of the merchandise and the actual market value thereof at the *date of shipment* in paper rubles, the currency stated in the invoice and alleged by the importers to have been paid for the goods.

It was exclusively the duty of the collector at the *date of entry* to have reduced to its equivalent in gold dollars of the United States the invoiced and entered amount in paper rubles, and to have estimated the amount of duty chargeable thereon.

We proceed to a consideration of the question: What was the monetary value of the paper ruble of Russia at the date of entry? The statutes bearing upon this subject are section 52, act of October 1, 1890, which makes provision for the manner of estimating the value of *foreign coins*, and section 2903, Revised Statutes, which provides that "the President may cause to be established fit and proper regulations for estimating the duties on merchandise imported into the United States in respect to which the original cost shall be exhibited in a depreciated currency issued and circulated under authority of any government." It must be borne in mind, in connection with this statute, first, that the President can not fix an arbitrary value to the depreciated foreign currency without regard to its intrinsic value as compared with our money; and, second, that instructions given by the Secretary of the Treasury relative to the value of a depreciated currency, either by general circulars to collectors, or by specific directions in a particular case, are in law to be regarded as regulations established by the President in that behalf.

Article 1294 of the General Regulations of the Treasury Department for 1884 directs that "when the standard value of foreign currency is undetermined, a consular certificate must be indorsed upon or securely attached to the invoice, in accordance with form 311."

The Secretary of the Treasury in synoptical decision 7398, dated March 8, 1886, advises that entry of merchandise shipped from Russia shall be refused, unless the invoice covering the same is made out in *paper rubles*, and is accompanied by a consular certificate giving the value thereof, estimated in United States gold dollars, as indicated by the latest quotations at St. Petersburg of sight drafts in sterling on London.

The certificate of the U. S. consul, attached to the invoice under consideration, was made in the form prescribed above, and up to the date of the entry, October 20, 1890, covered by this protest, as far as we have been able to discover, there have been no regulations of a conflicting nature issued by the President.

It is true that paper currency is merely a promise to redeem the face value thereof in the standard coin of the country issuing the same, and that the value of such standard coin, as estimated by the Director of the Mint and proclaimed by the Secretary of the Treasury, must be accepted in estimating the amount of duties chargeable on imported merchandise, when the paper currency with which the merchandise was purchased has a greater value, as compared with our money, than the standard coin it represents.

This rule, however, does not apply to paper currency which is redeemable only at a discount. Such paper currency then becomes a depreciated currency. It is also true that the certificate of the consul is merely *prime facie* evidence as to the actual value of a depreciated currency; but in the present case the evidence is to be taken as conclusive, as it is not controverted by the appellants.

We find as facts:

(1) That the value of the merchandise was correctly stated in Russia paper rubles.

(2) That the paper ruble is a depreciated currency issued and circulated under the authority of Russia.

(3) That by regulations established by the President the value of the paper ruble at the date of entry of the merchandise in question was $0.6015.

We hold that the claim of the appellants was well taken, and the protest is sustained. **(11847—G. A. 838.)**

NEW YORK, *August 28, 1891.*

COTTONETTES.—The importers of the merchandise in question say: "We protest against the assessment and liquidation of duty upon one bale of cottonette. We claim that your classification of said merchandise as woolen cloth dutiable at 50 per cent ad valorem and 44 cents per pound under paragraph 392, act of October 1, 1890 is erroneous, and that said merchandise should be classified as manufactures of cotton not specially enumerated or provided for, and dutiable at 40 per cent ad valorem, under paragraph 355, N. T., for the reason that cotton is the component part of chief value, a very small percentage of the goods being wool."

The official sample of the material accompanying the protest and papers in the case was, at the request of the board, the subject of a quantitative analysis by the chemist in charge of the U. S. laboratory at New York.

This officer reports as follows relative thereto:

Quality of wool as worsted in colored condition, 31·94 per cent; quality of cotton in colored condition, 68·06 per cent.

Based upon the above analysis, together with the testimony of expert witnesses, who examined the sample referred to, we find as facts concerning the merchandise in question:

That it is composed of cotton and wool, of which materials cotton forms the principal part in quantity and wool the component of chief value.

We hold that duty was properly assessed upon the goods in accordance with the provisions of paragraph 392, N. T.

The protest is overruled and the action of the collector affirmed. (**11853—G. A. 841.**)

NEW YORK, *September 8, 1891.*

FLANNELS DUTIABLE AS WOMEN'S AND CHILDREN'S DRESS GOODS.—The report of the appraiser relative to the merchandise covered by the protest in the present case is as follows:

The goods are wool flannels, weighing over 4 ounces to the square yard, measuring over 57 inches in width, and costing over 50 cents per pound. They were returned for duty as all-wool flannels at 44 cents per pound and 50 per cent ad valorem, under paragraphs 393 and 395, act October 1, 1890.

The importers in their protest say: "We claim the goods in question are specially provided for as similar description to women's dress goods, under paragraph 395, N. T."

We find as facts on the face of the papers that the merchandise is flannel composed wholly of wool, valued at above 50 cents per pound and weighing over 4 ounces to the square yard.

The portions of the two paragraphs bearing upon the question at issue are:

393. Flannels composed wholly or in part of wool, * * * valued at above 50 cents per pound, shall be classified and pay the same duty as women's and children's dress goods and goods of similar character and description provided by this act.

395. On women's and children's dress goods * * * composed wholly or in part of wool * * * the duty shall be 12 cents per square yard and, in addition thereto, 50 per cent ad valorem: *Provided*, That on all such goods weighing over 4 ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto, 50 per cent ad valorem.

In accordance with the above provisions the flannels of wool were classified as women's and children's dress goods, and, inasmuch as they weighed over 4 ounces per square yard, the rate of duty prescribed by the proviso attached to paragraph 395 was held to be applicable to, and was assessed upon, the goods in question.

It is inferred that the contention of the importer is that the merchandise is subject to only the rate of duty provided in the first clause of paragraph 395 for women's and children's dress goods.

This contention we hold to be not well taken. By the terms of paragraph 393, the flannels in question being composed of wool, and of greater value than 50 cents per pound, are to be considered as women's and children's dress goods, and subject to all of the provisions, including the proviso made applicable thereto, under paragraph 395, N. T.

The action of the collector in assessing duty upon the merchandise in question at 44 cents per pound and 50 per cent ad valorem was, in our opinion, correct, and is affirmed. (**11866—G. A. 857.**)

TREASURY DEPARTMENT, *October 17, 1891.*

WOOLEN PLUSH.—The Department is in receipt of your letter of the 25th ultimo, transmitting an application from the Jackson and Sharp Company, of your city, for drawback on woolen plush, imported by them per steamship *Switzerland* from Antwerp, by way of Philadelphia, August 6, 1891, and used in upholstering seats, backs, and rests, and safety ropes for berths in exported sleeping cars of their construction.

It appearing from your report that the wastage incurred was very small, and that the remaining scraps are of no value, you are hereby authorized, in accordance with your recommendation, to allow a drawback equal to the duties paid on the imported plush so used, less the legal deduction of 1 per cent. (**11929.**)

TREASURY DEPARTMENT, *October 21, 1891.*

WOOL WASHED ON THE PELT.—Referring to your note of yesterday, I have to inform you that Synopsis 11297 expressed the conclusions arrived at by this Department regarding the classification of wool washed on the pelt before pulling, but that synopsis 11400 contains the decision of the question by the Board of General Appraisers, which has been accepted as the rule of practice for custom officers, no appeal having been taken by the protestants. (**11938.**)

NEW YORK, *September 24, 1891*

ROBE PATTERNS—WOOL AND SILK PIECE GOODS AND EMBROIDERIES.—The appraiser reports that "the merchandise in question consists of women's dress goods imported in patterns, each pattern comprising a certain number of meters of plain woven fabric sufficient for the body of the dress, and one or more shorter pieces embroidered for trimming the garment."

Upon one invoice covered by the protest these dresses, or robes so called, are invoiced as "entireties, while upon the other the plain material and cost of embroidering are separately valued. The plain and embroidered parts are, however, readily separable for valuation, and were therefore returned for duty separately."

The collector classified the goods in accordance with the report of the appraiser, and assessed duty upon the plain portion thereof at the rate of 12 cents per square yard and 50 per cent ad valorem, under the appropriate provision of paragraph 395, act of October 1, 1890, and at 60 cents per pound, and, in addition thereto, 60 per cent ad valorem upon the embroidered part, under paragraph 398, N. T.

The importers, in protesting against the action of the collector, say:

We claim said goods should have been assessed at 50 per cent ad valorem and 44 cents per pound as manufactures of wool or worsted not specially provided for; or under paragraph 395 of said act, as dress goods, at 50 per cent ad valorem and 12 cents per square yard. We hold that the small part of each of said robes should not pay a different duty from the whole robe, as it would be unsalable without it, and that the parts being put up and sold together in every instance will make it an article which is subject to only one assessment of duty and not to several, the same as clocks and many other articles which have one duty when put together and different ones when the parts are imported separate.

We further hold that style 27 in case 1190 can not be termed embroidered according to the definition of embroidery as given by the Encyclopedia Britannica and G. A. 470, rendered March 31, 1891, there being simply a cord sewn on by machines, not worked upon the cloth, and which can be removed without defacing the piece of goods.

The sample submitted to us of style No. 27 shows it to be a fabric of wool ornamented with silk threads, the ornamentation resembling in appearance tambour work.

The testimony of prominent manufacturers and importers of similar goods who appeared before the board was to the effect that this style, as well as styles numbers 1, 6, 7, 8, 9, 11, 12, 15, 16, 20, 22, 24, 25, and 26, were embroidered on a machine known as the Bonnaz or Cornerly machine.

The specification of the patent, therefore, which we have examined, describes the work produced by the machine as round-stitch and chain-stitch embroidery. The corded or tamboured appearance of the work is produced by the machine twisting the silk at the same time the needle therein is embroidering the required design upon the fabric.

We therefore find that this portion of the merchandise is embroidered, and overrule the protest relative thereto.

This ruling is not in conflict with G. A. 470, wherein the board held that "the term tamboured or embroidered * * * can only be properly and safely applied to those fabrics * * * figured or ornamented by the employment of the needle, whether directed by the hand or by machinery." * * *

We further find that all of the merchandise covered by this protest is women's dress goods composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, weighing less than 4 ounces to the square yard.

We can not sustain the claim of the appellants that the plain and embroidered parts of the so-called robes, which were invoiced as an entirety, should be treated in the same manner as clocks or other completed articles.

In G. A. 334 the board held that merchandise similar to that in question was not wearing apparel, but was piece goods intended to be made into wearing apparel.

The appraiser having segregated the value of the plain and embroidered portions of the goods in question, the action of the collector in assessing duty upon the separate parts thereof, in accordance with the provisions of paragraphs 395 and 398, respectively, was, in our opinion, correct, and is affirmed. **(11975—G. A. 888.)**

NEW YORK, *October 8, 1891.*

CHARGES FOR WINDING, HANKING, SKEINING, ETC., WORSTED YARN.—We find (1) that the merchandise consists of six bales of worsted, imported from Liverpool, and entered at the port of Philadelphia on September 30, 1890.

(2) That the items of charge to which objection is taken by the protest consist of the following:

	£	*s.*	*d.*
Winding into skeins	15	8	10
Hanking and bundling	7	14	5
Paper and strings	7	14	4
Cost of packing	2	8	0
Total	33	5	7=$162

(3) That the merchandise was actually purchased in the market of Bradford, England, and that the invoice, as verified by oath, did not include and specify the said charges, or any of them, in the declaration required to be filed by section 5 of the act of June 10, 1890.

(4) We are of opinion that these charges are elements of dutiable value, either as entering into the *per se* market value of the merchandise, or as belonging to those "costs, charges, and expenses incident to placing the merchandise in condition packed ready for shipment to the United States," which are expressly made a part of such dutiable value by section 19 of said act of June 10, 1890. They were properly, therefore, included in the estimate of market value.

There is no evidence of any kind before us that these charges were twice included in the estimate of market value, as seems to be contended.

The objection to the constitutionality of the act of June 10, 1890, has been many times decided by this board not to be well taken.

All the grounds of protest are accordingly overruled, and the collector's decision is affirmed. **(12017—G. A. 930.)**

NEW YORK, *October 10, 1891.*

FEZ CAPS.—The goods are invoiced as red Fez caps. They were assessed for duty at 49½ cents per pound and 60 per cent ad valorem as wearing apparel, under paragraph 396, N. T., and are claimed by the appellant to be dutiable either as hats of

wool under paragraph 393, or at 44 cents per pound and 50 per cent ad valorem as wool-knit fabrics, under paragraph 392, act of October 1, 1890.

The caps are not hats and are not popularly nor commercially known as hats. They are composed of a felted knit fabric, with a long silk tassel attached to the center of the crown. They are not known to trade or commerce as knit fabrics.

The protest is overruled, and the assessment of duty by the collector is hereby affirmed. **(12025—G. A. 938.)**

NEW YORK, *October 16, 1891.*

WOOL INVOICED IN SHANGHAI TAELS.—We find as facts in this case:

(1) That S. Conrad's Sons imported into the port of New York, November 12, 1890, 163 bales of wool from Shanghai, covered by two invoices and which were returned by the appraiser as wool of the third class, valued at less than 13 cents per pound, including charges, and subject to duty at 32 per cent ad valorem, the invoiced value in Shanghai taels being the appraised value.

(2) That the entry of said wool was made in the currency of the invoices.

(3) That said wool was shipped at Shanghai April 15 and 26, 1890, upon two invoices certified by the U. S. consul at that port on the 16th and 30th days of said month, and that said wool was purchased in the currency of the invoices.

(4) That the value of the Shanghai tael, expressed in the money of account of the United States as duly proclaimed by the Secretary of the Treasury, January 1, 1890, was $1.03.1, and as proclaimed October 1, 1890, $1.25.6.

(5) That the entry of said wool was made at the custom-house in New York November 12, 1890, and the duty was liquidated in accordance with the value of the tael as proclaimed October 1, 1890.

The protestants allege in their protest, which is not sworn to, that the tael at Shanghai, on the 15th day of April, 1890, at the then rate of exchange, was equivalent to $1.0929, and on the 26th day of said April, $1.059, in American gold coin, but they offered no evidence to support this allegation. The protestants further allege that the liquidation of their entry upon the basis of value of the tael as proclaimed on the first day of October, 1890, in effect increased the value of their wool for dutiable purposes beyond the actual and the appraised market value thereof at the time and place of export, and claim that such liquidation is illegal. In the liquidation of the duties under this entry, the collector, upon examination of the invoice, entry, and appraised value of the merchandise, ascertained that there was a concurrence in the several values, expressed in taels. It is claimed, upon the one hand, that the foreign market value, expressed in the money of account of the United States according to the rate of exchange at the time of purchase and shipment, is the correct value upon which duty should be assessed. Upon the other hand, it is alleged that the foreign market value was taken, and that that value was expressed in taels; that the tael had no value in the money of account of the United States, except as fixed by the proclamation of the Secretary of the Treasury; that the proclamation in force at the time of the entry superseded the former proclamation and in effect repealed it; that no duties attached to the merchandise until it was imported; that when duties did attach they attached according to the laws there in force, and that it was the duty of the collector to compute the duties upon the tael value according to the law in force when he was required to act. If in one instance this requirement appeared to work to the prejudice of the importer, at another time the effect might appear to be prejudicial to the Government, and thus, as a rule, was not unfair to either party.

While we find no decision of the courts clearly covering the point raised is this case, yet the language of the opinion in Hedden *v.* Merritt (115 U. S., 27), seems to sustain the action of the collector, and the views heretofore expressed by this board in G. A. 838 support his action.

It is proper to call attention to the fact that the Secretary of the Treasury, on the

first day of July, 1891, changed the language of his quarterly proclamation. Formerly it was stated therein that the proclaimed value is "to be followed in estimating the value of all foreign merchandise *imported* on or after" the specified date. In the proclamations of July 1, 1891, and subsequent dates, the language is changed to "*exported* to the United States on and after the" date thereof.

Under the requirements of the law as they appear to us to have existed at the time of this importation, we are of the opinion that the collectors' action was correct.

The protest is overruled, and the action of the collector affirmed. **(12038—G. A. 951.)**

TREASURY DEPARTMENT, *November 28, 1891.*

DRAWBACK ON EXPORTED WOOL.—The Department is in receipt of your letter of the 21st instant, in which you inclose the application of Messrs. Chas. J. Webb & Co. for the rebate of duty paid on certain wool by embracing in one export entry merchandise from four different importations, neither of which, you state, paid a duty amounting to $50.

You report that, under the provisions of article 943 of the Regulations of 1884, and section 3016, Revised Statutes, which prescribes that "no merchandise imported shall be entitled to a drawback of the duties paid, unless the duties so paid shall amount to $50 at least," the application in question was denied by you, and you ask to be advised whether you would be justified in granting the request of the said importers.

In reply, I have to state that the combination of separate small importations in one export entry for the purpose of making an amount of duty which would exceed $50, in order to obtain a refund of duty paid, is regarded as an evasion of the requirements of the statute, and should not be permitted.

Your action, therefore, in refusing the application is hereby approved. **(12092.)**

NEW YORK, *November 10, 1891.*

PILE FABRICS, WOOL CHIEF VALUE—CARPETS FOR UPHOLSTERY PURPOSES.—The collector classified the goods in question as pile fabrics composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animal, and assessed duty upon it at 49½ cents per pound and 60 per cent ad valorem, under paragraph 396, act of October 1, 1890. The importers claim that the goods are dutiable at 50 per cent ad valorem, under paragraph 470 of said act, as carpets or carpeting of wool, flax, or cotton, or composed in part of either of them.

An examination of the official sample of the merchandise shows it to be a heavy cloth with a cotton back and an extra looped warp of wool, which forms a surface pile. Every alternate loop thread is cut, giving to the face of the goods a corded velvety effect.

The material is invoiced as "crab and red spot figured cords rep.," and the venders thereof advertise themselves as manufacturers of carriage and railway laces and woven figured velvets.

In addition to the above significant facts, the fineness of the cotton threads composing the back of the goods indicates that they are not suitable for floor wear, but were probably designed for and are chiefly used for upholstering seats of cars, as stated by the appraiser.

We find as facts that the merchandise is not carpets or carpeting. We further find that it is composed of wool and cotton, wool chief value, and that it is a pile fabric.

The protest is accordingly overruled, and the action of the collector is affirmed. **(12142—G. A. 1004.)**

NEW YORK, *December 2, 1891.*

GLORIA CLOTH.—The appraiser reports that "the merchandise in question consists of a manufacture of silk in the warp and worsted in the weft. It has no border on the selvage, which is a distinguishing characteristic of merchandise known as umbrella cloth, but is similar to women's and children's dress goods."

It was assessed with duty at 12 cents per square yard and 50 per cent ad valorem, under paragraph 395, act of October 1, 1890.

At the hearing in the case the counsel for the importers appeared before the board and argued in support of their protest:

(1) That the merchandise is not dress goods.

(2) That it is composed of silk and worsted (not wool).

(3) That silk is the component material of chief value entering into its fabrication.

An analysis of the merchandise had by the board confirmed the appellant's claim that the component parts thereof are worsted and silk, of which substances silk is the greater in value. There was no evidence submitted, however, to us tending to impeach the appraiser's statement that, inasmuch as the material has no border on the selvage, it was not umbrella cloth.

We make the following findings of fact:

(1) That the merchandise is known as gloria cloth.

(2) That it is composed of silk and wool or worsted, silk chief value.

(3) That it is used in the manufacture of women's and children's dresses and is similar in description and character to women's and children's dress goods.

(4) That it weighs less than four ounces to the square yard.

Women's and children's dress goods is a phrase of commercial designation.

The goods in question are composed wholly or in part of worsted, and are of like character and description as, and are to be treated in the same manner as if they were, women's and children's dress goods.

Commercial designation takes precedence in the classification of mixed materials. Consequently the ruling in Hartranft *v.* Meyer does not apply in the present case.

We hold the goods are more specifically provided for in paragraph 395 than in paragraph 414.

We are of the opinion that the proviso attached to paragraph 414 removes the merchandise in question from classification thereunder, for, notwithstanding the fact that the fabric is composed of silk and worsted, it is equally a fact that it is a manufacture of silk or of which silk is the component material of chief value, of which wool or the hair of the camel, goat, or other like animal is a component material.

The protest is overruled, and the action of the collector is affirmed. (**12230—G. A. 1044.**)

NEW YORK, *December 2, 1891.*

SMOKING JACKETS—WEARING APPAREL.—The goods covered by this protest are smoking jackets composed of cotton bodies bound with worsted braid. They were returned by the appraiser as wool wearing apparel. The collector classified them as such, and assessed duty upon them at 49½ cents per pound and 60 per cent ad valorem, under paragraph 396, act of October 1, 1890.

The importer claims that the merchandise is dutiable at 50 per cent ad valorem, under paragraph 349 of the said act, as cotton wearing apparel.

We are of the opinion that the importer's contention is correct. Paragraph 396 provides for clothing, ready made, and articles of wearing apparel * * * not specially provided for, * * * composed wholly or in part of wool, etc.

Paragraph 349 provides for wearing apparel * * * composed of cotton or other vegetable fibers, or of which cotton or other vegetables fiber is the component material *of chief value.*

Applying the principles of statutory construction as laid down by the Supreme Court of the United States in Meyer *v.* Hartranft, we are forced to hold that the goods in question are more specifically provided for under paragraph 349 than under paragraph 396.

We find as facts that the merchandise is wearing apparel composed of cotton and wool, and that cotton is the component material of chief value entering into the fabrication thereof. We accordingly sustain the protest as to the rate claimed by the appellant to be applicable thereto, under the act of October 1, 1890, and overrule the portion of the protest with regard to the constitutionality of said act. (**12231—G. A. 1045.**)

NEW YORK, *December 2, 1891.*

PAINTERS' CANVAS (WOOL).—The appraiser in his special report to the collector says: "The merchandise in question consisted of a manufacture of wool and cotton commercially known and sold as painters' canvas."

It was classified as a manufacture of wool, and assessed with duty at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, act of October 1, 1890. The importer claims the merchandise is a manufacture of cotton and wool, *cotton chief value*, and dutiable at 40 per cent ad valorem, under paragraph 355 of said act.

At the hearing in the case samples of merchandise were submitted without testimony as to the relative cost of the component materials entering into the fabrication thereof. An inspection of these samples shows the goods to be a fine corded woven fabric, one surface ribbed and the other presenting the appearance of a knit fabric or webbing. The samples are sent to the U. S. chemist at New York for analysis, who reported that they were "found to consist wholly of wool fibers, although the fibers forming the ribs of the fabric consist of wool hair called 'Ukemp.'" Several grades of wool are to be found in each sample. Based upon this report, we find that the merchandise is not a manufacture of cotton or of which cotton is the component material of chief value.

The protest is accordingly overruled, and the decision of the collector is affirmed. (**12234—G. A. 1048.**)

NEW YORK, *December 2, 1891.*

NUNS' VEILINGS.—The goods in question are woven fabrics known commercially as nuns' veilings. They are composed of wool in the weft and cotton, silk, and wool in the warp, respectively.

The goods were classified as part worsted dress goods, or goods of like description, and assessed for duty at 12 cents per square yard and 50 per cent ad valorem, under paragraph 395, act October 1, 1890.

The importers claim that the goods are dutiable at 44 cents per pound and 50 per cent, in accordance with the provision of paragraph 392 of the said act applicable to manufactures of wool not otherwise provided for, valued at above 40 cents per pound.

At the hearing in the case the evidence tended conclusively to show that the merchandise contained a border upon each side thereof and was of such a flimsy character that it was not suitable to be made into dresses for women or children, and that it was known commercially as nuns' veilings or bordered veilings, and not as dress goods.

It was also in evidence that there is a material known commercially as nuns' veiling which has a border on one side, and which is composed of the same materials as, but made in a more substantial manner than, the merchandise in question, and that this material is known as dress goods.

We make the following finding of facts in this case:

(1) That the merchandise is composed wholly or in part of wool, worsted, the hair

of the camel, goat, alpaca, or other animal, and weighs less than 4 ounces per square yard.

(2) That it is known commercially as nuns' veiling, and not as women's or children's dress goods, coat linings, or Italian cloths.

(3) That it contains a border on each side, and is of a flimsy character, and not suitable for use in the manufacture of women's or children's dresses, or for purposes to which women's or children's dress goods, coat linings, or Italian cloths are usually applied.

(4) That in material and manner of fabrication, with the exception of having a border on each side formed in the process of weaving, it is similar to women's dress goods.

Based upon the above findings, it is apparent that the case turns upon the scope of the term "goods of like character and description" contained in paragraph 395.

The Supreme Court, in Greenleaf *v.* Goodrich (101 U. S., 283), enunciated the following principle: "The statute does not contemplate that goods classed under the words 'of similar description' shall be in all respects the same. If it did, these words would be unnecessary. They were intended to embrace goods like, but not identical with, delaines." The jury had been charged that "goods of similar description * * * is a similarity in respect to the product *and its adaptation to uses.* * * * If you find that the product or result is an article for *ladies' dresses* made with a cotton warp and worsted filling, the question for determination is whether the two kinds of goods are substantially the same and alike," and the Supreme Court found no error in the charge.

In Sullivan *v.* Robertson (37 F. R., 778), in relation to Thybet coatings, commercially known as "dress goods," his honor Judge Lacombe said: "With regard to this general group of goods (which we know not only from the evidence in this case, but from our experience in other cases, is a species of fabric which women *use for their dresses*"), etc.

It would thus appear from the authorities cited that adaption to use was a necessary qualification in order to classify fabrics composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca or other animals as goods of similar description or character with women's or children's dress goods, coat linings, Italian cloth, or bunting.

The goods in this case are not susceptible of use for the purposes to which the fabrics above mentioned are usually applied.

We therefore hold that they do not fall within the provisions of paragraph 395, but are dutiable as claimed by the appellants.

The protest is accordingly sustained. **(12237.—G. A. 1051.)**

NEW YORK, *December 2, 1891.*

HOUSE FLANNEL.—The appraiser reports that the merchandise in this case is a manufacture of wool and cotton resembling toweling, and that it is not flannel and can not be used for the same purposes to which flannel is applied.

It was classified as a manufacture of wool and assessed with duty at 33 cents per pound and 40 per cent ad valorem, under paragraph 392, act Oct. 1, 1890.

The importers claim the goods are known commercially as house flannel, and are composed of wool in the weft and cotton in the warp, valued at not over 15 cents per square yard and therefore dutiable at 7 cents per square yard and of 40 per cent ad valorem, presumably under paragraph 394 of the said act.

The importers appeared before the board and testified, as did other witnesses, that the merchandise was an especial kind of flannel other than flannel for underwear, commercially known as house flannel, and that it was designed for use in scrubbing floors. It appears on the invoice, and was admitted by the importers,

that the material is valued at less than 50 cents per pound and weighs over 4 ounces to the square yard.

We therefore find as facts:

(1) That the merchandise is known commercially as house flannel.

(2) That it is not flannel for underwear.

(3) That it is not valued at more than 30 cents per pound.

Upon the above findings of fact, the contention of the importers must be dismissed.

Even if the material is flannel, a point we shall not pass upon, inasmuch as it is valued at not more than 50 cents per pound, it can not be classified and pay the same duty as women's and children's dress goods. Were such not the case and the goods were dutiable under paragraph 395, the material weighing more than 4 ounces per square yard, the rate of duty made applicable thereto by the terms of the proviso attached to paragraph 394 would be 44 cents per square yard and 50 per cent ad valorem, in lieu of 33 cents per square yard and 40 per cent, the rate imposed upon the merchandise by the collector.

It was in evidence that the goods contained no wool, but were composed exclusively of cotton. Samples thereof were submitted to the board, which had been subjected to chemical tests and which tended to confirm the statement of expert witnesses to that effect. This point, however, is immaterial. The importer made no claim that the merchandise was dutiable either as a countable cotton cloth or as a manufacture of cotton, but contended that the merchandise was dutiable as women's and children's dress goods or goods of similar character, composed in part of wool with a warp of cotton or other vegetable fiber. They were in error as to this contention.

The protest is accordingly overruled, and the action of the collector must stand. **(12238—G. A. 1052.)**

NEW YORK, *December 3, 1891.*

CAMEL'S HAIR CLOAKINGS.—The importers in this case claim the goods are flannels, and as such subject to duty at 33 cents per pound and 35 per cent ad valorem, under paragraph 393, act of October 1, 1890.

The appraiser reported the goods were camel's hair clothing. They were thus invoiced, and we so find as facts.

Duty was assessed upon the merchandise at 44 cents per pound and 50 per cent ad valorem, under paragraph 392 of the said act.

An inspection of the invoice shows the goods are valued at over $1 per pound and weighing more than 4 ounces per square yard.

Assuming the contention of the importers that the fabrics are flannels to be correct, they are removed from classification under paragraph 393 by virtue of the proviso attached thereto, and are dutiable at the rate imposed under paragraph 395.

The protest is accordingly overruled and the action of the collector stands. **(12245—G. A. 1059.)**

NEW YORK, *December 4, 1891.*

WORSTED SHAWLS (EMBROIDERED).—We find on the face of the papers that the articles in question are shawls composed of worsted and embroidered with silk.

Duty was assessed upon them at the rate of 60 cents per pound and 60 per cent ad valorem, in accordance with the provisions of paragraphs 398 and 373 of the act of October 1, 1890.

The importers claim that inasmuch as shawls are specifically enumerated in paragraph 392 of the said act, they are subject to no other duty than at 44 cents per pound and 50 per cent ad valorem, as therein provided.

It is true, as contended, that shawls are specifically enumerated in paragraph 392,

but the proviso attached to paragraph 373 provides "that articles of wearing apparel and textile fabrics, when embroidered by hand or machinery, and whether *specially* or otherwise provided for in this act, shall not pay a less rate of duty than that fixed by the respective paragraphs and schedules upon embroideries of the materials of which they are respectively composed."

In the present case the merchandise is wearing apparel or textile fabrics composed of worsted, and is embroidered. We hold that it was properly assessed with duty at 60 cents per pound and 60 per cent ad valorem, the rate applicable to worsted embroideries.

The protest is accordingly overruled, and the action of the collector is affirmed. **(12247—G. A. 1061.)**

NEW YORK, *December 4, 1891.*

UPHOLSTERY CANVAS OR CLOTH (WOOL).—The merchandise in question is known in trade as upholstery canvas or cloth. It is a white corded fabric composed of a heavy cotton cord in the warp and fine threads of wool in the weft. It was classified as a manufacture of wool valued at over 40 cents per pound, and assessed with duty at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, act October 1, 1890.

The importer submitted a sample of goods similar in appearance, composed exclusively of cotton, which was valued at a higher price than the merchandise in question, in support of their contention that cotton was the component material of chief value entering into the fabrication of the goods covered by this protest, upon which fact is founded their claim that duty should have been assessed upon the merchandise at 40 per cent ad valorem, under paragraph 355 of the said act.

The board has no evidence before it tending to discredit the appellant's contention relative to the comparative value of the cotton and wool entering into the fabrication of the goods, nor was it deemed necessary to take evidence upon this point.

We make this finding of facts:

(1) That the merchandise is composed wholly or in part of wool.

(2) That it is a manufacture of which cotton is a component material of chief value.

Inasmuch, however, as paragraph 355 does not contain the words "manufactures of which cotton is the component material of chief value," the provision of paragraph 392 is equally as specific, and controls the classification of the goods by reason of its imposing the higher rate of duty applicable thereto. The Treasury Department has for many years construed the statute in accordance with this principle.

Congress in repeated acts has given to the ruling of the Treasury Department legislative indorsement by reenacting the provisions relative to cotton and woolen goods, with the notable exception that in the act of October 1, 1890, wearing apparel composed of cotton and wool is made subject to duty under paragraph 349 by the addition of the words, "of which cotton is the component material of chief value."

In our opinion, the claim of the importer that the merchandise in question is dutiable at 40 per cent ad valorem, under paragraph 355, is not well founded.

The protest is accordingly overruled, and the action of the collector is affirmed. **(12250—G. A. 1064.)**

NEW YORK, *December 24, 1891.*

CRIMPED WOOL (IMITATION HAIR).—The merchandise is wool which has been prepared and crimped to resemble human hair. It was assessed for duty at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, N. T., as a manufacture of worsted, and is claimed by the appellants to be dutiable, under paragraph 381, as scoured wool of the second class.

We find that the merchandise is not known commercially as scoured wool, and

that it has been advanced beyond the scouring process. The protest is therefore overruled. Reference is made to paragraph 390, N. T. (**12331—G. A. 1103.**)

NEW YORK, *January 13, 1892.*

EMBROIDERED WOOL PIANO AND TABLE COVERS.—We find as facts on the face of the papers and from the exhibits in the case:

(1) That the goods were imported subsequent to October 6, 1890, and are textile fabrics.

(2) That they are known commercially as table covers and piano covers.

(3) That the bodies of the articles are composed of wool, and that they are embroidered by hand or machinery with silk and worsted and with worsted and cotton, respectively.

(4) That wool is the component material of chief value entering into their fabrication.

Duty was assessed upon the merchandise at 60 cents per pound and 60 per cent ad valorem, under paragraph 398, act of October 1, 1890. The appellants claim, first, that the act of October 1, 1890, is unconstitutional, and alternatively that the fabrics were made on frames and are composed of wool embroidered with silk; that they cost over 40 cents per pound and are dutiable at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, act of October 1, 1890.

The appellants, in an elaborate argument, contend (1) that, as the bodies of the fabrics are composed exclusively of wool, they are specifically provided for in par agraph 392, and can not be removed therefrom for classification by general terms in a later part of the act.

(2) That inasmuch as paragraph 414 provides that all manufactures of silk of which wool * * * is a component material shall be classified as manufactures of wool, it is made imperative that in the present case the goods must be so classified.

(3) That table covers are denominatively provided for at 60 per cent ad valorem, under paragraph 351.

Regarding the last contention, we hold there is no force whatever. Paragraph 351 applies to chenille table covers or table covers of which cotton chenille is the component material of chief value. It is admitted that the table covers in question are not composed in whole or in part of chenille. The board has heretofore held that the proviso attached to paragraph 373 covers all textile fabrics embroidered by hand or machinery, whether such fabrics are provided for denominatively or not. The language of this proviso is explicit and not general in its terms, and includes all articles of wearing apparel and textile fabrics of whatever material composed. Based upon the findings in this case, we hold that the embroidered wool table and piano covers were properly assessed for duty at 60 cents per pound and 60 per cent ad valorem, the rate applicable to worsted embroideries, in accordance with the provisions of paragraphs 373 and 398. The protest, both as to the constitutionality of the act of October 1, 1890, and the rate of duty, is overruled, and the action of the collector is affirmed. (**12365—G. A. 1137.**)

TREASURY DEPARTMENT, *March 3, 1892.*

SORTED WOOL.—I inclose herewith, for your information, a copy of a letter, dated the 11th ultimo, from the honorable Attorney-General of the United States, stating that he has directed an appeal to be taken from the judgment of the circuit court for the southern district of New York, affirming the decision of the Board of U. S. General Appraisers in the appeal of E. S. Higgins & Co. from your assessment of duty upon an importation of certain East India wool.

After reviewing the various questions of law involved in the case and expressing the opinion that it is well to have upon some of them a ruling from a court of last resort, the Attorney-General concludes as follows:

Meanwhile I suggest to you that your orders to the collector be modified so that hereafter the words (in paragraph 383, N. T.), "twice the duty to which it would be otherwise subject," shall not be construed to mean double the duty imposed on the wool in its actual imported condition, but double the duty which would have been imposed on the wool if it had been imported without sorting or any other changes referred to in paragraph 383, and that whenever this shall result in making the doubled duty under paragraph 383 less than that under paragraph 385 or paragraph 386 then the duty under paragraph 385 or paragraph 386 be imposed, as held by the Board of General Appraisers in their opinion in this case.

The above suggestion is adopted by this Department, and the instructions contained in Synoposes Nos. 11307 and 11665 are hereby modified accordingly. (**12468.**)

NEW YORK, *February 25, 1892.*

COTTON EMBROIDERIES (METAL).—We find as facts on the face of the papers:

(1) That the articles covered by this protest are tidies embroidered by hand or machinery.

(2) That they were imported subsequent to October 6, 1890.

(3) That they are composed of cotton, worsted, silk, and metal.

(4) That the material or body of the tidies is composed chiefly of cotton, and that cotton is the component material of chief value in the completed articles.

Inasmuch as worsted entered into the fabrication of the embroidered tidies, duty was assessed thereon at 60 cents per pound and 60 per cent ad valorem, under paragraph 398, act of October 1, 1890. The collector, in transmitting the papers in the case, however, expressed some doubts as to the correctness of his classification. The appellants claimed alternatively that the goods are dutiable at 60 per cent ad valorem as articles made of lace, under paragraph 373, act of October 1, 1890. They are in error as to the character of the goods, but this is not sufficient to invalidate their claim if the articles are found to be properly dutiable under the paragraph and at the rate specified in the protest.

In the present case the material of which the articles are composed is cotton, and is embroidered by hand or machinery, whether with worsted, silk, or metal is, in our opinion, immaterial. We hold that the goods are dutiable as cotton embroideries, at 60 per cent ad valorem, under paragraph 373.

The protest is sustained. (**12559—G. A. 1243.**)

NEW YORK, *March 21, 1892.*

WOOL CAPS NOT HATS.—This protest is against the assessment of duty at the rate of 49½ cents per pound and 60 per cent ad valorem, under paragraph 396, N. T., on certain wool caps, and at 45 per cent ad valorem, under paragraph 347, N. T., on so-called "cotton zephyrs and crepes," which the appellant claims are dutiable, viz, the caps at 38½ cents per pound and 40 per cent ad valorem as "hats of wool," under paragraph 393, N. T., or at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, N. T., and the zephyrs and crepes at 40 per cent ad valorem, under paragraph 355, N. T.

We find as facts from the papers and samples in the case:

1. That the caps are composed of wool, are intended to be worn upon the head as an article of wearing apparel, and are not hats.

* * * * * * *

In view of our findings of fact, and following the board's decisions in G. A. 938 on fez caps, * * * we hold that all of said merchandise was properly assessed for duty by the collector, and his action is affirmed. (**12653—G. A. 1302.**)

NEW YORK, *March 24, 1892.*

CHINA CAMEL'S HAIR.—The merchandise subject of this protest was invoiced from Tientsin, China, as "Peking camel's hair," and having been returned by the appraiser as class 2, China camel's hair, was assessed for duty at 12 cents per pound, under the provisions of paragraphs 377 and 384, act of October 1, 1890.

The protestants claim that the merchandise is "precisely identical with Russian camel's hair," and as the value, including the charges, does not exceed 13 cents per pound, is dutiable at 32 per cent ad valorem, as camel's hair of class 3, under paragraph 385 of the said act, and they state that the term "Russian camel's hair," as used in the trade, does not mean camel's hair grown in Russia, but a certain class of camel's hair which is sold here under the name of "Russian," being mostly imported directly or indirectly from Russian ports; that there are no camels in Russia; that the camel's hair comes from central Asia, whence it is exported either by way of Russia or China; that, while the hair in question was imported by way of China, it is virtually of the same class as imported by way of Russia, hence is entitled to admission at the same rate, otherwise the tariff would discriminate against the Chinese treaty ports and in favor of Russia.

We find as facts from the papers and testimony in the case:

(1) That the merchandise in question was imported from China and invoiced as "Peking camel's hair," and was correctly returned by the appraiser as "China camel's hair."

(2) That there is a marked difference between what is known in trade as China camel's hair and Russian camel's hair, the former being usually lighter in color, finer in quality, and of higher value than the latter.

(3) That the article known as China camel's hair comes almost invariably from Chinese ports and the so-called Russian camel's hair generally from Russian ports.

In accordance with our findings of fact, we hold that the merchandise in question was correctly assessed for duty, and the protest is overruled. **(12657—G. A. 1306.)**

NEW YORK, *April 4, 1892.*

ALPACA NOILS.—We find as facts:

(1) That the protestants, Charles F. Murphy & Co., imported into the port of Boston, January 14, 1891, certain noils, upon which duty was assessed at the rate of 30 cents per pound, under paragraph 388 of the act of October 1, 1890.

(2) That said noils were produced from the fleeces of animals known as the alpaca by scouring, oiling, and combing the same, by which process the long hair or tops are removed and the short hair or furry portion is combed into noils.

(3) That for making certain soft fabrics some noils are more desirable than the mixed fibers.

(4) That noils are not waste in fact nor commercially known as such.

The protestants contend that "the noils provided for in paragraph 388 are those of or from wool only, and not from hair; that the hair of the alpaca is specifically named and provided for in paragraph 377, N. T., and made dutiable at 12 cents per pound by paragraph 384, N. T.; that although in the form of noils, the merchandise is still nothing but the hair of the alpaca."

It is well known that the merchandise called noils is a product obtained in a special form and condition by combing wool or the hair of the camel, goat, alpaca, or other like animal. The words "all other wastes composed wholly or in part of wool," as found in paragraph 388, do not, in our opinion, relate to or qualify noils and shoddy, for they are specially manufactured and intentionally produced, while some, and probably all, of the varieties of waste therein mentioned are in fact waste unavoidably and accidentally produced in the manufacture of yarns or fabrics. The manufacture of shoddy is a great industry. It is made from woolen and worsted rags, and its name implies to those familiar with the article that it is composed of

wool; therefore Congress could not have intended the words "all other wastes composed wholly or in part of wool" to apply to anything except what was distinctly known as waste. As noils are only produced from wool or combing hair, it was sufficient to provide for noils, and thus cover all noils. A perusal of the proceedings before Congress will show that it was impractical to provide separately for noils made from the different classes of wool or hair or to grade them, and therefore noils generally are comprehensively provided for in paragraph 388.

We therefore hold that alpaca noils are provided for in paragraph 388, N. T., and it appearing that the duty was assessed as therein provided, the protest is overruled and the action of the collector affirmed. (**12680—G. A. 1329.**)

TREASURY DEPARTMENT, *July 11, 1892.*

WOOLS ON THE SKIN.—In reply to your letter of the 5th instant, in which you ask to be referred to the instructions issued by the Department as to ascertaining the quantity and value of wools on the skin, as prescribed by paragraph 387, act of October 1, 1890, I have to inform you that no instructions have been issued under said paragraph, but the instructions in force prior to the passage of said act and contained in the published decisions of the Department are applicable to such importations. (**13016.**)

NEW YORK, *June 20, 1892.*

SKIRTED WOOL.—(1) We find as facts, that Wood Bros. & Co. imported into the port of New York, per steamer *Rhactia*, December 12, 1891, certain wool, upon which the double duty of 64 per cent ad valorem was imposed, by virtue of the provisions of paragraphs 383 and 385, N. T.

(2) We further find that said merchandise was wool of the third class, valued, including charges, at less than 13 cents per pound, and was not sorted wool, or wool from which a portion of the fleeces had been rejected to increase the value of the remainder thereof. but was wool of the kind known as skirted wool as imported at the time of the passage of the present tariff act.

The importers claim that the same was dutiable at 32 per cent ad valorem, as wool of the third class valued at less than 13 cents per pound, dutiable under paragraph 385, N. T.

In accordance with our findings of fact, we hold that the claim is well founded, and the protest is sustained. (**13049—G. A. 1554.**)

NEW YORK, *July 16, 1892.*

DUTIABLE CHARGES—COST OF WEIGHING WOOL, ETC.—The appraiser in these cases added to the invoice price certain charges, to wit, charges incurred in weighing, porterage, labor of pressing canvas and hoops to make dutiable value, and the collector included such charges in the value for classification of certain wool under section 19 of the act of June 10, 1890, which provides that whenever imported merchandise is subject to an ad valorem rate of duty, or to a duty based upon or regulated in any manner by the value thereof, the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition packed ready for shipment to the United States shall be part of the purchase price or foreign market value thereof.

The protests claim that said charges were incurred after the bales of wool constituting the importation were packed and in a condition ready for shipment, and hence that they were not dutiable. This is the issue made by the pleadings.

The cases were set for hearing on June 2, 1892, and one of the parties to the protest appeared and testified in his own behalf. But his testimony is by no means clear and it fails, we think, to establish the verity of the contentions of the several protests. To be sure, the witness swears that he buys wool "ex-warehouse," and states that "ex-warehouse" means "when it is ready for shipment." He adds: "I don't buy it in the country." On cross-examination by the representative of the Government, the witness admitted that he had never been in Smyrna, the place of export of the merchandise in question.

To the question, "Do you know anything as to the course of business in Smyrna!" he replied, "Not positively; no, sir." He finally admitted that he had never been in the places of export of any of the wool subject of the protests under consideration and that he knew nothing of the course of business in such places except by hearsay.

The proof, in our opinion, is not sufficient to rebut the presumptions in favor of the verity of the reports of the local appraiser and of the return of the collector.

The law of June 10, 1890, made certain charges hereinbefore alluded to dutiable which under previous laws had been nondutiable. This fact perhaps explains the indefinite character of the testimony offered by appellants.

We find as facts:

(1) That the various importations were made under the provisions of the new tariff act.

(2) That the charges added by the appraiser and accepted as the basis of classification by the collector were incurred in placing the merchandise in condition ready for shipment to the United States.

We therefore hold that the action of the collector was justified by both the law and the facts, and his decision is affirmed. **(13194—G. A. 1615.)**

NEW YORK, *July 25, 1892.*

WASTE WOOL.—The merchandise in this case consists of jute waste, classified and assessed for duty at 10 per cent ad valorem under paragraph 472 of the new tariff act, and of cotton and wool waste classified and assessed for duty at 30 cents per pound under paragraph 388 of said act. Appellants claim that said jute waste is entitled to free entry under paragraph 670 of said act and that said cotton and wool waste is entitled to free entry under paragraph 549 of said act.

There was a hearing of the case on the 7th of June, 1892, at which appellants appeared and submitted samples of the merchandise subject of controversy.

An examination of these samples shows the character of the merchandise: (1) The jute waste appears to be the refuse yarns thrown off in the process of manufacturing jute fabrics. (2) The cotton and wool waste is the refuse of a cotton and woolen factory, thrown off in the process of manufacturing cotton and woolen fabrics. Webster defines the word "waste" as "refuse; especially the refuse of cotton, silk, or the like."

Paragraph 472 of the new tariff act, under which the jute waste was assessed for duty, is as follows: "Waste, not specially provided for in this act, 10 per centum ad valorem."

Paragraph 388 of said act, under which the cotton and woolen waste was assessed for duty, is in part as follows: "On noils, shoddy, top waste, * * * and all other wastes composed wholly or in part of wool, the duty shall be 30 cents per pound."

A mere statement of the facts strongly supports the correctness of the action of the collector; but the protest contributes somewhat to the same end. In that document, appellants say of the cotton and woolen waste:

A very small percentage of woolen waste is contained in the bale, the great bulk of the contents being cotton waste, and that therefore the woolen waste, not being an appreciable amount, and only contained in the bale by accident, no duty should have been exacted upon the said bale.

It is clear from this admission that the so-called cotton and woolen waste is in part wool. In a late case, that of Knauth, Nachod & Kühne *v.* The collector of New York, under date of June 10, 1892 (unpublished), the board held that a quantity of wool thread waste provided for in paragraph 388 of the new tariff act at 30 cents per pound could not be admitted to entry at 10 cents per pound under paragraph 389 of said act by mixing it with a larger quantity of mungo.

We find as facts:

(1) That the merchandise was imported under the new tariff act.

(2) That the samples submitted at the hearing and marked Exhibit A and Exhibit B are true samples of the merchandise under protest.

(3) That sample marked Exhibit A is in part woolen waste, and represents one bale of the merchandise, No. 81.

(4) That sample marked Exhibit B is jute waste, consisting of refuse yarns thrown off in the process of manufacturing jute fabrics, and that there is no evidence tending to show that it is designed for use as, or is fit only for, paper stock; that it is fit for other uses; and that it represents twelve bales, No. 80 and Nos. 82–92.

On these facts we hold that the collector was justified in assessing the merchandise for duty. The protest is overruled and the decision of the collector affirmed. **(13217—G. A. 1638.)**

NEW YORK, *August 8, 1892.*

WOMEN'S AND CHILDREN'S SILK AND WORSTED DRESS GOODS, SILK CHIEF VALUE.—The merchandise in this case consists of women's and children's dress goods, composed of silk and worsted, classified and assessed for duty at 12 cents a square yard and 50 per cent ad valorem, under paragraph 395 of the new tariff act. Appellants claim that they are entitled to enter the merchandise at 50 per cent ad valorem, under the provisions of paragraph 414 of said act, on the ground that the component material of chief value therein is silk; that it is composed in part of worsted, and that it does not contain wool as a component material.

The case was heard on May 13, 1892, and appellants appeared, and one of them, Charles Ophuls, was sworn as a witness. In the course of his examination he verified a sample of the importation in question, and stated its use to be for women's and children's dress goods.

The quantitative analysis of the aforementioned sample among the papers shows silk to be the component material of chief value therein.

There is no dispute about the facts in this case. The pleadings present the single issue whether the merchandise under consideration is provided for in paragraph 395 of the new tariff act as classified by the collector, or in paragraph 414 of said act as claimed by appellants.

Paragraph 414 is as follows:

All manufactures of silk, or of which silk is the component material of chief value, not specially provided for in this act, 50 per cent ad valorem.

Paragraph 395 is in part as follows:

On women's and children's dress goods * * * and goods of similar description or character, composed wholly or in part of * * * worsted * * * and not specially provided for in this act, the duty shall be 12 cents per square yard, and in addition thereto 50 per cent ad valorem.

It is in proof that the component material of chief value in the merchandise here is silk. This fact brings it within the terms of paragraph 414, unless it is specially provided for elsewhere in the act. But it is also in proof (1) that the merchandise is composed in part of worsted, and (2) is used for women's and children's dress goods; and women's and children's dress goods, composed in part of worsted, are enumerated in paragraph 395.

It has been held that the words "manufactures of hair" are a sufficient designation to place such manufactures among enumerated articles. (Nathan *v.* Butterfield,

125 U. S., 70.) The description here in paragraph 395 is much more definite—"women's and children's dress goods"—and one of the appellants, a merchant, called as a witness, testifies that said merchandise is "used for women's and children's dress goods. It is also matter of common knowledge that such merchandise is known commercially as "women's and children's dress goods;" and the commercial designation of an article among traders and importers, where such designation is clearly established, fixes the character for the purpose of the tariff laws. (Arthur *v.* Lahey, 96 U. S., 11.) Hence the merchandise here, not less by reason of its commercial name than by the uses for which it is designed, answers to the enumeration of paragraph 395; "women's and children's dress goods * * * composed * * * in part of * * * worsted."

We are warranted in making a comparison of paragraphs 414 and 395 with the view of ascertaining which of them governs the classification in the case at bar by the method pursued in Hartranft *v.* Meyer, 135 (U. S., 237). In that case the merchandise was matelassé cloth composed of silk, cotton, and wool, silk being the component of chief value. Schedule K, act of 1883, imposed a certain rate of duty upon "all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act." Schedule L of said act imposed a certain other rate of duty upon all goods, wares and merchandise, not specially enumerated or provided for in this act, made of silk or of which silk is the component material of chief value.

Upon this state of facts the court remarked:

If either schedule stood alone in the statutes obviously the goods would be dutiable under that schedule, for they were made in part of wool, as described in Schedule K, and they were goods of which silk is the component material of chief value, as described in Schedule L. * * * It can not be assumed that Congress intended two rates for the same goods, to be selected at the pleasure of either the collector or the importer. In each schedule are found the words "not specially enumerated or provided for in this act," so that neither description is absolute or exclusive. We place no stress on the position of the two schedules in the act, or on the fact that Schedule L, coming after Schedule K, expresses the later thought and purpose of Congress, but we turn rather to the character of the descriptive language used in the one, it being more general than in the other. In Schedule K it is "made wholly or in part of wool," thereby reaching to all manufactured articles of which any portion is wool, while in Schedule L *it is narrower and more limited*, "made of silk, or of which silk is the component material of chief value." *This is a special enumeration rather than the other.*

Further, the court quotes with approval the language of Mr. Justice Bradley, to the same effect in Solomon *v.* Arthur (102 U. S., 208).

The reasoning of this decision is irresistible; and we may therefore well paraphrase it, not less on the ground of its force, as an argument, than on its conclusiveness as an authority.

The case at bar is parallel with the cases cited, but is more pronounced than either of them.

The merchandise here is women's and children's dress goods, composed in part of worsted, silk being its component material of chief value.

Paragraph 414 of the new tariff act imposes a certain rate of duty upon all manufactures of silk or of which silk is the component material of chief value, not specially provided for in said act; while paragraph 395 imposes a certain other rate of duty upon women's and children's dress goods, composed in part of worsted, not specially provided for in said act.

It is obvious that if either of these paragraphs stood alone in the statutes, the merchandise would be dutiable under that paragraph; for it is women's and children's dress goods, composed in part of worsted, and the component material of chief value therein is silk. Neither description is absolute or conclusive, because each paragraph contains the restrictive clause, "not specially enumerated or provided for in this act."

Which of these descriptive provisions is the general and which the special enumeration? That in paragraph 414—"all manufactures of silk or of which silk is the component material of chief value"—applies to a thousand and one articles made of silk, or of which silk is the component material of chief value—to every article of silk or of which silk is the component material of chief value *not specially provided for in said act.* It is obviously a provision of very wide application.

Now, turning to the other paragraph—395—we find all the conditions of a narrower and more definite enumeration, to wit: (1) goods composed in part of worsted; (2) goods designed for a certain kind of garments, that is to say, for the making of dresses; (3) goods designed for dresses for a certain class of persons of the female sex, namely, women and children.

In the language of Mr. Justice Brewer in the Hartranft and Meyer case, "this is a special enumeration rather than the other."

Further paraphrasing the learned judge in the same case:

Logically, the two phrases, standing together in the same body of laws, would be related as follows: All manufactures in which silk is the component material of chief value (paragraph 414), not specially provided for in said act, shall pay a duty of 50 per cent ad valorem; but if such manufactures are women's and children's dress goods, and are composed in part of worsteds, they shall pay a duty of 12 cents a square yard and in addition thereto 50 per cent ad valorem.

On the evidence, the record, and on common knowledge, obtained through intercourse with merchants and others in the course of the performance of our official duties, we find the following facts:

(1) That the merchandise subject of protest was imported under the provisions of the new tariff act.

(2) That it consists of women's and children's dress goods.

(3) That it is composed in part of worsted, but the component material of chief value therein is silk.

(4) That it is commercially known as women's and children's dress goods; and

(5) That it is designed for use as, and is used for, women's and children's dress goods.

In view of the facts, and under the law, we hold that the action of the collector was correct.

The protest is overruled and the decision of the collector is affirmed. (**13287.—G. A. 1667.**)

NEW YORK, *August 18, 1892.*

ANTIQUE TIDIES MADE OF WORSTED.—The goods covered by this protest are invoiced as "fancy antique tidies." The netting or foundation of these articles presents the appearance of crochet work, but is in fact lace. The meshes of this lace are about one-half of 1 inch square, and are filled in with cotton threads, metal threads, and worsted yarn, respectively.

The collector classified the merchandise as worsted embroidery, and assessed duty thereon at 60 cents per pound and 60 per cent ad valorem, under paragraph 398, N. T.

Of the several claims made by the appellants in their protest the Board will refer to but one, namely: That the merchandise is dutiable at 60 per cent ad valorem as cotton lace. This claim, in our opinion, is well founded. The worsted and metal work applied to the cotton lace does not partake of the nature of embroidery. This work is performed by machinery, and consists of filling certain of the meshes with worsted yarn and metal thread, by wrapping these substances about the cotton threads forming the squares or meshes, and thus creating an effect indifferently resembling embroidery.

We make these findings of facts as to the merchandise:

(1) It is known commercially as lace tidies.

(2) These articles are composed of cotton, metal, and worsted, of which materials cotton in the finished state is the greatest in value.

(3) These tidies are not embroidered by hand or machinery.

In accordance with these findings, we hold the goods are dutiable at 60 per cent ad valorem, under paragraph 373, N. T., and to this extent sustain the protest. (**13296.—G. A., 1676.**)

NEW YORK, *September 17, 1892.*

MINERS' HATS OF WOOL AND RESIN.—The goods in question are molded into the form of hats and are invoiced as hats. They are intended to be worn by miners, and are composed of resin and wool. Duty was assessed upon these articles at 16½ cents per pound and 30 per cent ad valorem, under paragraph 393, as hats of wool.

The appellants claim the articles to be dutiable at 10 per cent ad valorem, under paragraph 24, as resin advanced in condition by a process of manufacture, or at 20 per cent ad valorem, in accordance with the provisions of section 4, act of October 1, 1890.

The Board is in possession of a quantitative analysis of a sample of the merchandise and the relative value per pound of the several component parts thereof, and we find as facts that wool is the component material of chief value entering into the fabrication of the goods in question and that they are hats of wool.

The protest is overruled and the collector's decision is affirmed. (**13350.—G. A 1760.**)

TREASURY DEPARTMENT, *October, 27, 1892.*

WOOL ON SHEARLING SHEEPSKINS.—The Department having, on the 23d of August last, designated a committee to establish a dividing line between shearling sheepskins, the wool on which has no commercial value and may be admitted free, and those on which the wool is sufficiently long to be subject to classification and, consequently, to duty, said committee, on the 19th instant, submitted the following report, which is hereby adopted as the rule for the guidance of customs officers in the classification of imported shearling sheepskins:

The wool on all shearlings has a commercial value, but from the investigations made by this committee we are of the opinion that the wool on shearling sheepskins which does not exceed one quarter of an inch in length on the body of the pelt is of such little value that the wool should be passed free of duty, and that all shearling skins where the wool exceeds one-quarter of an inch in length should be subject to duty. (**13419.**)

NEW YORK, *August 4, 1891.*

SORTED THIRD-CLASS WOOL.—The protests filed in these cases involve the construction of paragraph 383, Schedule K, of the tariff act of October 1, 1890, and especially of what is commonly known as the wool "sorting clauses" of said paragraph.

We append the entire paragraph, as follows, for a full understanding of its provisions:

383. The duty upon wool of the sheep or hair of the camel, goat, alpaca, or other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act imported as of any specified class or claimed by the

importer to be dutiable as of any specified class shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, hocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

The merchandise in the case of E. S. Higgins & Co. (No. 10362*a*) is returned to the local appraiser as "wool of the third class," a "portion of it costing over 13 cent. per pound, and the rest costing under 13 cents per pound *sorted*."

In the case of H. C. Thacher (No. 11106*a*), the merchandise was also returned as wool of the third class, valued at less than 13 cents per pound, which is stated to have been "sorted."

The wool was accordingly returned for duty at 64 and 100 per cent ad valorem respectively, under paragraphs 378, 383, 385, and 386, these rates being assessed as "twice the duty" to which such merchandise would "be otherwise subject" within the supposed meaning of said paragraph 383, i. e., twice 32 and 50 per cent, respectively.

The following specific contentions are raised in these cases:

(1) That the provisions of paragraph 383, relating to the subject of "sorting," or, in other words, the sorting clauses of said paragraph, are inapplicable to wools of the third class, and were never intended by Congress to be so applied.

(2) That "sorting," within the meaning of said paragraph, includes only such manipulation of wools by the rejection of a part of the original fleece as may result in an increase of value, and that sorts composed of the inferior portions of the fleeces can not be held liable to double duty, even if those increased in value are so liable.

(3) That the grading of the wools by a separation of the fleeces merely according to *colors* is not "sorting" within the proper signification of that word.

(4) That if liable to double duty as sorted wool, the duty should be doubled only in its value in an unsorted and not a sorted condition.

We have afforded adverse interests (the woolgrowers and carpet manufacturers, including other importers) a full opportunity to be heard on these questions, entertaining as we do a due appreciation of the difficulties involved in their proper solution. These difficulties are enhanced by the manifest fact that paragraph 383 of the present tariff act, where the wool "sorting clause" appears for the first time, seems to have been formulated amid the struggles of these contending interests, each seeking to obtain a law expressive of the views now contended for in the opposite constructions respectively insisted on by them before this board in argument.

In construing legislation on this subject no great light is obtained by going beyond the act of March 2, 1867 (14 Stat. at Large, 559), entitled "An act to provide increased revenue from imported wool, and for other purposes," which for the first time provided for a classification of wools into three classes, designated as "clothing wools," "combing wools," and "carpet and other similar wools." (Rev. Stat., 1878, pp. 470, 471.)

The language of that act was not changed by the act of March 3, 1883, paragraph 356 of which reads as follows (Elmes's Law of Customs, p. 435):

356. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. The duty upon wool of the sheep, or hair of the alpaca, goat, and other like animals, which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject.

It is a settled rule of legal construction that in construing a tariff revenue system consisting of various acts passed at different times, each alteration is to be regarded in connection with the entire system, and "no disturbance will be allowed of existing legislative rules of general application beyond the clear intention of Congress." (Saxonville Mills *v.* Russell, 116 U. S., 13.)

The leading purpose of the paragraph under consideration is to prevent frauds on the revenue by changing the ordinary character or condition of wool in any of the modes specified so as to increase the embarrassments attending its classification and the estimate of its market value.

To this end the law levies a double duty with certain exceptions for the following acts of manipulation as applied to "wool of the sheep or hair of the camel, alpaca, and other like animals," when imported into this country:

(1) If such merchandise is "imported in any other than ordinary condition," i. e., as practiced at the time the tariff act was passed, and prior thereto.

(2) If the merchandise is "changed in its character or condition for the purpose of evading the duty."

(3) If "reduced in value by the admixture of dirt or any other foreign substance."

(4) If "sorted or increased in value by the rejection of any part of the original fleece."

(5) If two or more specified classes of wool or hair are mingled in any one bale or package, the whole bale or package is subject to the higher rate of duty to which any part is subject.

Keeping in view this analysis of the law and the purposes of its enactment, we proceed to consider the several contentions raised by the protest:

(1) We can see no escape from the conclusion that paragraph 383, including the sorting clauses, is applicable to wools of every class. It enumerates, generally, "wool of the sheep or hair of the camel, goat, alpaca, or other like animals," and refers to the duties on these articles. No distinction is made as to the different classes of wools or hair. No exception is made of the third class, nor is any other qualification affixed limiting its application. We are not authorized to introduce an exception or qualification to a statute which Congress has not introduced in the language of the law, if such language, as here, is clear and unambiguous. (Potter's Dwarris Stat., 200.)

So far as concerns the letter of paragraph 383, there is just as much reason for excepting wool of the third class from its other penal conditions as from the one relating to "sorting."

That duties may be doubled on account of sorting is clear, moreover, from the following clause in said paragraph: "*Wools* on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be *doubled on account of its being sorted.*"

It is true that in the debates of the U. S. House of Representatives, when certain amendments made to this paragraph were the subject of discussion, the chairman of the Committee on Ways and Means is reported to have interpreted it as imposing only simple ad valorem duties upon wool of the third class. That opinion can not change the legal construction of the law where the meaning is otherwise plain. The parliamentary history of an enactment is often consulted to throw light upon clauses of doubtful meaning, but generally the sound rule of construction, as stated by a standard author, is that "courts are not at liberty to recur to the views of individual members of the legislature in debate to ascertain the meaning of a statute, or, at the most, the views so expressed as to the object and effect of particular provisions of an act under discussion are entitled to very little weight." (Endlich on Interpretation of Statutes, § 30, p. 41.) And this is the doctrine of the U. S. Supreme Court itself. (United States *v.* Union Pacific R. R. Co., 91 U. S., 72.) The law, moreover, is the concurrent language of the Senate and of the President who approved it, as well as of the House, and there is nothing to indicate

that this concurring body or department intended it to speak anything not expressed in its language.

The arguments urged as to the injustice resulting from this conclusion, or showing the embarrassments attending the practical application of the law as thus construed, are more properly addressed to the lawmaking power. We can not be properly influenced by them as factors in construing the law, which is our only function.

We accordingly decide that the "sorting clauses" of said paragraph apply to all wools, including those of the third class.

(2) The contention is further made, and, in our judgment, is correctly taken, that the word "sorting," as used in the paragraph under consideration (383), must be construed according to its statutory definition, as there specified. It is limited, so far as double duties are concerned, to such portions of the fleeces as have been *increased* in value per pound above the value of the entire fleece from which the wool was taken.

The language is "which has been *sorted or increased in value* by the rejection of any part of the original fleece."

These alternative phrases, in our judgment, are to be construed as equivalent in meaning.

"Sorting," it is true, as usually defined, means that process preliminary to wool manufacturing necessary to fit the article for textile purposes, which consists in classifying by separation the fibers of the fleece as clipped from the sheep's body, "according to length, fineness, elasticity, and soundness of staple." The wool varies in quality in different parts of the animal, as many as twelve or fourteen "sorts" being sometimes obtained from a single fleece, but frequently not more than from five to seven qualities. This is fully explained in the testimony of experts taken before the board, as well as by reputable works on wool manufacture. (Spon's Encyc. of Manf. and Raw Materials, vol. 2, p. 2060; Beaumont's Woolens and Worsted Cloth Manf., p. —.)

Our reasons for holding that the "sorting," as here referred to, is confined to that process which increases the value of the sorted article above the average per pound before sorting, are the following: The statute is to be construed in the light of the evil intended to be remedied by it. Prior to its enactment it was a practice prevailing among the carpet manufacurers of this country to sort wool of the third class by rejecting the inferior qualities of the fleece so as to increase the value of the remainder and to import the superior quality thus obtained, leaving the other behind unimported. This fact was brought to the attention of the Committee on Ways and Means in the U. S. House of Representatives and made the basis of a specific complaint by the woolgrowers, who were contending for protective rates of duty for their particular industry of sheepraising. Moreover, a rejection of any part of the fleece, so as to increase it in value above the average, is a mode of sorting in itself and would be tautological, unless intended to define the word so as to confine its meaning to this process involving the rejection of the inferior qualities of the fleece.

(3) We are satisfied, furthermore, that a grading of wools by assembling the whole fleeces according to *colors* merely is not a sorting of such wools within the meaning of the statute under consideration.

The evidence before the board shows that the practice for thirty years past has been to grade East India wools according to color, and that this process is not regarded as "sorting" within the ordinary signification of that word. And we so decide.

(4) The fourth contention involves the construction of the phrase "shall be twice the duty to which it (the wool or hair) would be *otherwise subject.*"

As applied to wools, sorted by rejection of any part of the original fleece so as to increase it in value above the average per pound, this clearly means that the duty on the sorted wool shall be twice that to which the fleece in its unsorted condition would be liable. (Arthur *v.* Pastor, 109 U. S., 139.)

(5) The "skirted wools," referred to in paragraph 383 by way of exception in the proviso, mean fleeces from which the skirts have been removed by clipping. The "skirts" embrace portions of the stained or inferior locks taken from the belly and legs, and, sometimes, from the neck. Wools merely skirted without further manipulation are not regarded as sorted within the meaning of said paragraph 383, nor are they otherwise subject to the penalties there prescribed by reason of being skirted.

We find as matter of fact in these cases:

(1) That the importation in each case embraces wool of the third class, within the meaning of paragraph 378 of the present tariff law.

(2) The portion returned by the appraiser as costing over 13 cents per pound was of this value, and that returned as costing less than this sum was of the value so stated.

(3) That the merchandise is East India wool, and that it has been the common practice to import this kind of wool into the United States separated or sorted as to colors the past twenty or thirty years.

(4) The merchandise has not been changed in its character or condition for the purpose of evading the duty, nor has it been reduced in value by the admixture of dirt or any other foreign substance.

(5) In the case of Higgins & Co. there has been a separation of the importation as to color into gray, yellow, and white wools, and a separation as to quality of the white wools, but not as to the gray and the yellow.

The gray and yellow have depreciated in value per pound below the average value of the lot before separation; but the white wool has appreciated in value by reason of a separation as to quality. The average value of the gray, yellow, and white we find to have been about 12 cents. The average value of the white we find to be about 18 cents.

(6) We find that the collector estimated the duty on all of these wools by making it twice what it would have been on the value of the wool in its present condition and not in its condition prior to manipulation by assorting.

(7) We find that the white wool in the importation of Higgins & Co., in addition to the process of classifying as to color, has also been further separated and classified as to quality so as to increase its value. It is therefore "sorted" within the meaning of paragraph 383. The gray and the yellow wool has not been so "sorted."

(8) The wool covered by the protest in the case of Thatcher & Co. has been reduced and not increased in value by the rejection of a portion of the original fleece, i. e., reduced below the average value per pound of the whole fleece from which it was taken.

These views operate to reverse the collector's decision in each importation, which decisions, it is proper to state, seem to have been made in deference to a suggestion made by the Secretary of the Treasury designed to bring the "sorting clauses" of the present tariff law before this board for construction.

It is proper to add that in reliquidating the entries proper regard must be had to the limitation imposed by the following clause of said paragraph 383: "Wools on which a duty is assessed amounting to *three times* or more than that which could be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted."

So the duty can not be "assessed upon an amount less than the invoice or entered value," as generally provided in section 7 of the act of June 10, 1890.

The decision of the collector in each case is reversed, and he is authorized to reliquidate the entries according to law. **(G. A. 797.)**

NEW YORK, *December 4, 1891.*

EMBROIDERED WOOLEN ROBES.—The goods in question are so-called robes. They consist of combination dress patterns composed of wool. The portion of the mate-

rial intended for the skirts of the dresses is plain, and the remainder is more or less elaborately embroidered with silk.

The goods were invoiced as entireties and were so returned for duty under paragraph 398, act October 1, 1890, at 60 cents per pound and 60 per cent ad valorem, the rate provided therein for "embroideries," composed of wool, worsted, the hair of the camel, goat, alpaca, or other animals, and made applicable to these goods by the provisions of paragraph 373 of the said act.

At the hearing in the case counsel for the importers appeared before the board and advanced the following argument in support of the protest:

(1) That the goods in question are subject to no greater duty than 44 cents per pound and 50 per cent ad valorem, in accordance with the provisions of paragraph 395, upon the grounds that although the merchandise is a textile fabric composed of wool, embroidered by hand or machinery with silk, the proviso attached to paragraph 373 is so grammatically constructed that the words "materials of which they are respectively composed" refer to the noun "embroideries," and not to wearing apparel and textile fabrics; consequently the proviso, so far as it applies to the goods in question, must be construed as if reading "textile fabrics embroidered with silk shall not pay a less rate of duty than 60 per cent ad valorem, the rate fixed upon embroideries of silk," and inasmuch as 60 per cent ad valorem is less than 44 cents per pound and 50 per cent in the present case, the last-named rate (which is the rate claimed in the protest) prevails.

(2) That the merchandise is of two kinds, separately provided for in the tariff, the value of each kind easy of determination, and that the appraising officer should have stated the value of the embroideries and plain fabrics and the collector assessed only upon the goods at the respective rates applicable thereto.

The first contention of the appellants is, in our opinion, without force. The subject of the proviso attached to paragraph 373 is wearing apparel and textile fabrics embroidered by hand or machinery, and the words "materials of which *they* are respectively composed" relate to the subject-matter of the sentence. Without stopping to consider how this sentence should have been grammatically constructed, we find no difficulty in arriving at the intent of Congress in framing the proviso under consideration, viz, that textile fabrics composed of wool, when embroidered by hand or machinery, should be treated for dutiable purposes as if they were embroideries composed of wool.

In Sullivan *v.* Robertson, (37 Fed. Rep., 778) Judge Lacombe said: "The statutes are not to be construed by any mere strict or critical interpretation according to grammatical rules." This we esteem to be a sound principle of revenue law. We accordingly overrule the first contention of the appellants.

In G. A. 888 the Board held that the appraiser at Boston acted correctly in segregating the value of embroidered and plain materials composing dress patterns similar to the merchandise in dispute, and we incline to the opinion that the several parts of the so-called robes covered by this protest should have been treated in the same manner. It would be a hardship to impose a higher rate of duty at one port than at another upon similar goods. The statutes must be construed, under the law, with a view to securing uniformity at all ports.

The so-called robes in this case are dress patterns, consisting of two pieces of cloth, not fashioned or further manufactured than cut into suitable lengths to be made into robes. The pieces are subject to different rates of duty, and the appraiser should have appraised the value of the respective kinds, and the duty fixed by law should have been imposed thereon. To this extent the protest is sustained, and the entry should be so reliquidated. (**G. A. 1066.**) (*a*)

---

a Modified by No. 13983—G. A. 2088.

TREASURY DEPARTMENT, *January 27, 1893.*

WORSTED AND SILK GOODS.—The Department is in receipt of a letter, dated the 13th instant, from the U. S. attorney for the southern district of New York, in which he reports the trial, on the 3d instant, of the so-called appraiser's suit No. 76, arising on the application of Mr. George M. B. Mudge for a review of the decision of the Board of General Appraisers at New York concerning the dutiable classification of certain merchandise imported by him in July, 1890, in which a verdict was rendered in favor of the importer.

It appears that the goods in controversy were composed in part of worsted and in part of silk, silk being the component material of chief value, which the collector classified as dutiable at the rates prescribed by paragraph 365 of the act of March 3, 1883, for goods composed in part of wool, worsted, etc., against which the importer protested, claiming that the goods were dutiable at the rate only of 50 per cent ad valorem as manufactures of silk, under the provisions of paragraph 383 of said act, and took the case to the Board of U. S. General Appraisers, who affirmed the decision of the collector, whereupon the importer appealed to the court under section 15 of the act of June 10, 1890, with the result as aforesaid.

The district attorney states that the court reversed the decision of the collector and the Board of U. S. General Appraisers, under the authority of Hartranft *v.* Meyer (135 U. S., 237) and Liebenroth *v.* Robertson (144 U. S., 35), wherein the principle is enunciated that "instead of making duty depend on the highest rate at which any component part is chargeable, it is made to depend on the highest rate at which the component material of chief value is chargeable."

Upon submitting the matter to the U. S. Attorney-General, under the provisions of section 15 of the act of June 10, 1890, that officer advises this Department that the case will not be pursued in a higher court.

You are therefore hereby authorized to take measures looking to a refund of the duty exacted in excess on the goods in question. (**13651.**)

NEW YORK, *December 21, 1892.*

CHINESE TROUSERS.—The merchandise in question consists of Chinese trousers, which the appellants claim are made of cotton and down, or feathers, and as such dutiable under paragraphs 355, 349, or 443, N. T.

The exhibit in the case was submitted to the chemist in charge of the laboratory connected with the U. S. appraisers' department at New York for analysis. That officer reports that he has examined the articles and they are found to consist for the most part of wool of the Donskoi quality, hard spun or twisted. The wool is the material greatly preponderating in weight and value over the other components.

We find as facts that the merchandise is clothing, ready-made, composed wholly or in part of wool, and hold that duty was properly assessed thereon at 49½ cents per pound and 60 per cent ad valorem, under paragraph 396, N. T. The protest is overruled, and the collector's decision is affirmed. (**13674—G. A. 1912.**)

TREASURY DEPARTMENT, *February 15, 1893.*

WORSTED SILK EMBROIDERED SHAWLS.—The Department is in receipt of a letter, dated the 10th instant, from the U. S attorney for the southern district of New York, in which he reports that the appeal of the United States from the judgment of the U. S. circuit court at New York in the case of certain worsted silk embroidered shawls, imported by Schefer, Schramm & Vogel, has been decided by the U. S. circuit court of appeals in favor of the importers.

The facts in the case appear to be that the above-named parties imported per *Cufic*, April 22, 1891, and per *The Queen*, April 30, 1891, certain shawls composed of worsted

and embroidered with silk, returned by the appraiser as dutiable at the rate of 60 cents per pound and 60 per cent ad valorem, under the provision found in paragraph 398 of the act of October 1, 1890, which provides those rates for embroideries of which worsted is a component material, and the proviso of paragraph 373, the importers claiming that the goods were dutiable either at the rates applicable to manufactures made wholly or in part of worsted, provided for in paragraph 392, or at the rate of 49½ cents per pound and 60 per cent ad valorem as wearing apparel, under the provisions of paragraph 396 of said act; that upon taking the case to the Board of U. S. General Appraisers, the decision of the collector was affirmed (*see* G. A. 1061 in in a similar case), whereupon the parties applied to the court, under the provisions of section 15 of the act of June 10, 1890, and obtained a verdict sustaining their contention that the goods were dutiable under paragraph 392 as manufactures made wholly or in part of worsted, and reversing the decision of the collector and the Board of the U. S. General Appraisers. Upon the rendition of this decision, and under the advice of the U. S. Attorney-General, the case was appealed by the Government to the circuit court of appeals with the result aforesaid.

The language of the circuit court of appeals is as follows:

The collector imposed a duty of 60 cents per pound and 60 per cent ad valorem under paragraph 398 of the same act, which placed that duty upon embroideries made of worsted, and under the general proviso contained in paragraph 373 of the same act, which is as follows:

"*Provided*, That articles of wearing apparel and textile fabrics, when embroidered by hand or machinery, and whether specially or otherwise provided for in this act, shall not pay a less rate of duty than that fixed by the respective paragraphs and schedules of this act upon embroideries of the material of which they are respectively composed."

Silk embroideries are dutiable under the act of 1890 at 60 per cent ad valorem, a less rate of duty than that upon worsted shawls. Flax, jute, and cotton embroideries are also dutiable at 60 per cent ad valorem.

The importers' protest was upon the theory that, as the shawls did not contain worsted embroideries, they were not dutiable under paragraph 398, and as a less duty was imposed upon silk embroideries than upon worsted shawls, the importations were properly dutiable under paragraph 392.

The question depends upon the proper construction of the quoted proviso contained in paragraph 373.

The Government contends that embroidered articles shall not pay a less rate of duty than that fixed upon embroideries of any of the materials of which the articles are composed; for example, a worsted shawl, with silk or cotton or jute embroidery, shall not pay less than the rate imposed upon worsted embroideries. This construction is grammatically consistent with the language of the proviso, but is inconsistent with its apparent object. The entire wool and worsted schedule shows that it was the intention of Congress to place a very high rate of duty upon articles manufactured from wool or worsted, and this intent is as plainly manifested in the worsted-embroidery section as in any other clause. Very plain language is required to make it manifest that the further intent of Congress was that a worsted fabric, when embroidered with cotton, should pay the same rate of duty that is imposed upon worsted embroideries. The proviso by no means requires or compels such a construction.

The main object of the proviso was to prevent a classification by their specific names of articles embroidered with some material, which classification might enable them to be dutiable at a lower rate of duty than is imposed upon embroideries of that material. The proviso therefore prescribes that such articles shall not pay a less rate of duty than is imposed upon embroideries of that material, but they may be dutiable at a greater rate because a higher duty may be imposed upon articles of that specific description. Thus an article of wearing apparel, of whatever material composed, which is embroidered with silk, shall not pay a less rate of duty than that imposed on silk embroideries. The proviso guarded against the importation of embroideries at a lower rate of duty than was imposed upon them under the claim that the article was not embroidery but a textile fabric or wearing apparel. The intent was to preserve the rates of duty which the statute imposes upon the embroideries specified therein, but it was not to make articles not embroidered with a material pay the same rate as if they had been embroidered with that material.

You are, therefore, hereby authorized to take measures looking to a refund of the duties exacted in excess on the importation in question, and you will apply these

instructions to all similar cases pending at your port where the parties have duly protected their rights under the provisions of the act of June 10, 1890. (**13731**)

TREASURY DEPARTMENT, *February 16, 1893.*

WOOL ON SHEEPSKINS.—The Department duly received your letter of the 17th ultimo, in which you request to be advised as to whether, in case of estimation of the amount of wool or hair on sheep or Angora goatskins by an appraising officer the importer holds such estimate to be excessive, "there is any appeal open to the importer for review of the appraiser's action."

In reply, you are informed that inasmuch as the action of the appraiser in the case in question relates to the quantity of wool on the imported skins and not to its value, the opinion of General Appraiser Lunt, referred to in your additional letter of the same date, to the effect that such action is not subject to review by application for reappraisement, appears to be correct.

Inasmuch, however, as the amount of duty assessed by the collector on such wool necessarily depends upon its quantity as well as its value, the importer may obtain, after payment of the duty under protest, a review of the collector's decision in the manner provided for by section 14 of the act of June 10, 1890. (**13732.**)

TREASURY DEPARTMENT, *February 16, 1893.*

WOOLEN RUGS.—The Department is in receipt of a letter dated the 10th instant, from the U. S. attorney for the southern district of New York, in which he reports that on the 7th instant the U. S. circuit court of appeals at New York handed down a decision reversing that of the U. S. circuit court at New York in the suit of David B. Ingersoll *et al.* against Daniel Magone (N. S., 13955), in regard to the dutiable classification of certain articles invoiced as "woolen rugs."

It appears that during the year 1888, the parties named imported from England into your port the rugs in question, which were classified for duty according to value under paragraph 362 of the act of March 3, 1883, which is as follows:

Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, not specially enumerated or provided for in this act, valued at not exceeding eighty cents per pound, thirty-five cents per pound and thirty-five per centum ad valorem; valued at above eighty cents per pound, thirty-five cents per pound, and in addition thereto forty per centum ad valorem.

Against which classification the importers protested, and appealed under the provisions of section 2931, Revised Statutes, claiming that the goods were "traveling or carriage rugs," and properly dutiable at the rate of 40 per cent ad valorem only under paragraph 378 of said act, which provides as follows:

Carpets and carpetings of wool, flax, or cotton, or parts of either or other material, not otherwise herein specified, forty per centum ad valorem; and mats, rugs, screens, covers, hassocks, bedsides, and other portions of carpets or carpetings, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description; and the duty on all other mats not exclusively of vegetable material, screens, hassocks, and rugs, shall be forty per centum ad valorem. (Synopsis 8702.)

Upon taking the case to the courts under the provisions of said section 2931 of the Revised Statutes, the circuit court at New York on the 18th of February, 1891, rendered a verdict in favor of the defendant (collector), whereupon the importers filed a bill of exceptions and took the case to the U. S. Supreme Court, whence it was relegated to the U. S. circuit court of appeals, with the result aforesaid.

In the written opinion handed down by the circuit court of appeals the following language is used:

The leading argument in favor of the collector's classification, and which met the approval of the circuit judge, is that the fact that rugs having been uniformly placed

in the tariff acts since 1861, in connection with provisions for carpets and carpeting and articles used on floors, and the principle of *noscitur a socius* shows the intent of Congress to limit the meaning of the term rug to articles of a character akin to carpets or mats, but it must be observed that screens, which are not used as a covering and which are not akin to carpeting, were also included in the same paragraph.

Inasmuch as the word rug had gradually come to acquire a meaning which included a woolen fabric, either when used for protecting a carpet or for protecting the person, so that the authors of a standard dictionary, published in this country in 1875, defined the word accordingly, and the article was in common use under the distinguishing name of traveling rug, we think the fair inference to be that Congress in 1883 intended to use the word in the meaning which it had previously fully attained.

The judgment of the circuit court is reversed.

You are therefore hereby authorized to take measures looking to a payment of this judgment, and you will apply these instructions to all similar cases arising at your port where the importers have duly protected their rights under the provisions of the act of June 10, 1890, or section 2931 of the Revised Statutes. (**13734.**)

TREASURY DEPARTMENT, *February 21, 1893.*

WOOL SAMPLES.—Paragraph 379 of the act of October 1, 1890, provides as follows:

The standard samples of all wools which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

And paragraph 380 of said act provides that—

Whenever wools of class 3 shall have been improved by the admixture of Merino or English blood from their present character, as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class 1 or as class 2, as the case may be.

In pursuance of the above provisions of law the Department, in April, 1891, appointed the following committee to advise the Department as to the propriety of adding to or renewing the standard wool samples then in use: Mr. Edward A. Greene, of Philadelphia, Pa. (chairman); Mr. John T. Rich, of Elba, Mich.; Mr. Nicholas Mauger, of New York City; Mr. John L. Houston, of Hartford, Conn.

In their final report, which is dated February 15, 1893, the committee remark that the principle of classification recognized by them was that of race and blood only and not that of use or adaptability; and they further state that, in their classification, it will be found that there are wools in the first class suitable only for carpets and others in the third class from which a fair article of clothing could be made.

Cabinets of the standard samples prepared by the committee will be furnished to the collectors at all of the principal ports.

The committee recommend that samples of such wools as are lacking from the cabinets prepared by them should be procured and added to the cabinets; also, that the customs examiners at the several ports should take samples of any wools not included in the standard samples, and should advise the Department whether such wools should be added to the cabinets.

The committee further recommend that, in order to indicate the different classes, samples of noils should be numbered upward from No. 1, first-class wool from No. 101, second-class wool from No. 201, third-class wool from No. 301, and free hair from No. 401.

The samples contained in the cabinets are numbered as in the following list, and are hereby established as standards for comparison in the examination and classification of wools, pursuant to the provisions of the act of October 1, 1890, entitled "An act to reduce the revenue and equalize duties on imports, and for other purposes." (**13740.**) (*a*)

a Modified by No. 14197.

List of whole fleece or large standard samples to be used in cases of litigation.

CLASS 1.

From America:
A. Argentine Republic.—1. Buenos Ayres—
104. Fleece unwashed, Lincoln crossbred.
From Africa:
1. Algeria—
127. Benghazi, fleece unwashed.
2. Morocco—
132. Larash Beldia, fleece unwashed.
From Africa:
137. Cape of Good Hope, native skin wool, not limed.
138. Cape of Good Hope, native skin wool, limed.
From Asia:
1. Turkey—
145. Improved, fleece unwashed.
146. Panorme, fleece washed.
From Europe:
1. Austria—
147. Buda-Pesth, Zigaya skin wool.
149. Flamantine skin wool.
150. Flamantine skin wool.
2. France—
156. Marseilles chalk skin wool, medium.
157. Marseilles chalk skin wool, coarse.
3. Wales—
164. Fleece washed.
4. Italy—
167. Lambskin wool.
5. Portugal.
171. Alentijo, fleece unwashed.
6. Spain—
173. Churro, fleece unwashed.
174. Talavera, fleece unwashed.
7. Turkey—
175. Adrianople, fleece washed.
176. Adrianople, fleece unwashed, from Imperial factory.
178. Kassapbatchia skin wool, super.
179. Kassapbatchia skin wool, second quality.
182. Kassapbatchia skin wool, super white.
185. Rodosto fleece, first quality.
186. Rodosto fleece, second quality.
187. Varnay Zigay, fleece unwashed.

CLASS 2.

From South America:
1. Peru—
201. Islay, alpaca fleece, all colors.
From Asia:
1. China—
209. Camel's hair, first quality.
2. Turkey—
214. Mohair fleece.

From Europe:

1. England—
   - 233. Goat hair, mixed skins, Russian, Cape, Italian, etc.
   - 237. Cape mohair, crossbred, sold as mohair.
2. Scotland—
   - 239. Black face and cheviot, fleece washed, half-bred hogs.
   - 242. Black face and cheviot, fleece washed, half-bred hogs.
   - 243. Black face and Leicester, fleece washed, half-bred hogs.
   - 247. Black face and Leicester lambskin wool.

CLASS 3.

From America:

1. Argentine Republic—
   - 301. Cordoba, fleece unwashed.
2. Chile—
   - 302. Valparaiso Criolla, fleece unwashed.

From Asia:

1. Afghanistan—
   - 306. Kandahar, first white.
   - 307. Kandahar, original fleeces.
2. China—
   - 308. China wool.
   - 312. Thibet, fleece washed.
3. East India—
   - 315. Joria, first white.
   - 321. Vicaneer, first white.
4. Georgia—
   - 323. B, first and second clip.
   - 324. A. B. and A. O., lamb's.
   - 325. B. O., first clip, fleece washed.
   - 326. B. S., first clip, fleece washed.
5. Persia—
   - 328. Bagdad, white.
   - 329. Bokhara, white fleece.
   - 330. Bokhara, black fleece.
   - 331. Khorassan fleeces, first clip.
   - 333. Mosul or Awassi fleeces.
6. Syria—
   - 334. Aleppo, fleece unwashed.
   - 335. Orfa, fleece unwashed.
7. Turkey—
   - 336. Armenia Erzroom, fleece.
   - 338. Angora Samsum, fleece washed.
   - 339. Angora Eskishehr, fleece washed.
   - 340. Bouldor, fleece washed.
   - 341. Karadi, fleece washed.
   - 342. Smyrna, limed skin wool.

From Africa:

1. Egypt—
   - 346. Washed, extra choice.
   - 347. Washed skin, extra choice.

From Europe:

1. Austria—
   - 348. Buda-Pesth, Zackel skin wool.

From Europe—Continued.

2. England—

TREASURY DEPARTMENT, *February 23, 1893.*

CABINETS OF STANDARD WOOL SAMPLES.—Referring to the Department's letters to you of January 20 and March 1, 1892, I have to inform you that the Department desires that cabinets of standard wool samples, prepared by the committee of which you are chairman, be furnished to the collectors of customs at the ports of Boston, New York, Philadelphia, Baltimore, and San Francisco, and to the Board of United States General Appraisers at New York. (**13742.**)

NEW YORK, *January 18, 1893.*

CARRIAGE APRONS MADE OF WOOLEN CLOTH.—We find that—

(1) The appellant imported into the port of New York, July 12 and 21, 1892, certain carriage aprons, claimed to be dutiable at 15 cents per square yard and 30 per cent ad valorem, under paragraph 369, N. T.

(2) Said aprons are completed articles, fabricated from heavy woolen cloth coated on the back with India rubber, and lined with wooden cloth of lighter weight.

(3) Said aprons are not waterproof cloth, even though made of such substance, but are manufactures made wholly or in part of wool, wool the component material of chief value, and are not susceptible of accurate square-yard measurement (see G. A. 890, wherein the board decided that certain cotton-pile fabrics, cut bias and made into dress facings, were not subject to square-yard duty, but were dutiable as manufactures of cotton, which decision was affirmed upon review by the United States circuit court for the southern district of New York).

Upon these findings, we hold that the collector committed no error in assessing duty upon the merchandise at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, N. T.

The protests are overruled, and the collector's decision is affirmed. (**13754—G. A. 1948.**)

NEW YORK, *January 18, 1893.*

DEGRAS OR BROWN WOOL GREASE.—The local appraiser at Philadelphia returned the merchandise covered by the protest in this case as degras or brown wool grease, and it was assessed for duty by the collector under paragraph 316 of the new tariff act of 1890.

The importation is made by the same person who appeared as protestant in case G. A. 1776, and he makes affidavit that the merchandise is similar to the article passed on by the board in that decision. It is claimed to be free of duty, under paragraph 599, as grease such as is "commonly used in soap-making," or "for stuffing or dressing leather, and which is fit only for such uses," and not specially provided for in the tariff act.

The board has examined several witnesses who deal in the article, all of whom testify that they are familiar with the commercial designation of the merchandise under consideration, and that it is known in trade as "degras, or brown wool grease," which is specially provided for by name is said paragraph 316.

We find as facts—

(1) That the sample presented to the board is a correct representative of the merchandise under consideration.

(2) That the article is a dark-brown grease, and is commonly known in trade as "degras, or brown wool grease," being bought and sold under this name.

(3) That while it is used largely for stuffing leather and making soap, it is specially provided for *eo nomine* in paragraph 316 of the present tariff act.

We may add that, without passing on the identity of the sample with that covered by our former decision, if the merchandise be the same, the additional testimony taken leads us to a different conclusion from the one reached in that case.

We accordingly overrule the protest and affirm the collector's decision. (**13757—G. A. 1951.**)

NEW YORK, *February 3, 1893.*

CRAVENETTE CLOTH.—The local appraiser returned the merchandise for duty as woolen or as worsted cloths "not waterproof," of the values respectively stated, and the collector assessed them for duty as such under paragraph 392 of the new tariff act of 1890 at the rates of duty specified in his report.

The importers claim that the goods are dutiable as "waterproof cloth" under the provisions of paragraph 369 of said act, which reads as follows:

369. Oilcloth for floors, stamped, painted, or printed, including linoleum, corticene, cork carpets, figured or plain, and all other oilcloth (except silk oilcloth), and waterproof cloth, not specially provided for in this act, valued at twenty-five cents or less per square yard, forty per centum ad valorem; valued above twenty-five cents per square yard, fifteen cents per square yard and thirty per centum ad valorem.

The cases were set for a hearing and many witnesses were examined on the issues growing out of the protests, the inquiries of the board being directed chiefly to the character of the goods covered by the protests and to the nature of a certain process to which they were alleged to have been subjected, and through which it was contended they had been rendered both rain repellent and waterproof.

The real and ultimate question for decision, as will appear from our findings of fact hereafter set out, is, whether this process or treatment of the worsted cloths under consideration operates to change their commercial designation from woolen or worsted cloths (specified in paragraph 392) to the "waterproof cloth" provided for in said paragraph 369.

The board makes the following findings of fact, based on the evidence, including the samples and papers in the cases:

(1) The merchandise consists of woolen or worsted cloths of the particular descriptions and values stated in the several reports of the local appraiser, and they were assessed for duty, as stated in the collector's reports, under the provisions of paragraph 392 of the present tariff act, which levies certain rates of duty on "woolen and worsted cloths" and other manufactures of wool, worsted or hair. The accompanying samples properly represent the goods in the cases corresponding with the marks and figures on them.

(2) These goods are chiefly used for the manufacture of clothing, either for men or women, according to their nature, texture, and weight. Some of the samples are commercially and variously known as women's and children's dress goods, as serges, and the like.

(3) They have been subjected to what is called the "cravenette process," deriving its name from the supposed inventor (Craven), the precise nature of which is not known. We find, however, upon the testimony of experts and others that the process probably consists in the application to the fabric of some solution which destroys the absorbent properties of the fiber of the cloth so as to render it comparatively water repellent, but leaving it as porous as before, not filling up the interstices of the cloth.

(4) The process is susceptible of application alike to worsted, cotton, and silk goods. It does not add to their weight, nor apparently change their texture or general appearance. Worsted or woolen cloth after being subjected to the cravenette process is not distinguishable by inspection from the same goods prior to the application of such process.

(5) We further find that worsted and woolen cloths known as "cravenette" goods were not probably imported into this country in any considerable quantities, if at all, prior to October 1, 1890, the process having been put in use in Bradford, England, not earlisr than the year 1888, when it purports to have been patented.

(6) The application of the process to goods costs but a few cents per yard, renders them water repellent but not waterproof, and does not change the commercial designation of woolen or worsted cloth to what is known in trade as "waterproof cloth."

(7) We find that none of the merchandise under consideration is "waterproof cloth" within the meaning of paragroph 369 of the new tariff act, as claimed in the protests.

This conclusion is corroborated by the change made in the tariff act of March 3, 1883, by the provisions of the present tariff law on this particular subject. The article known as "waterproof cloth" was provided for in the former act (1883) by paragraph 340, as follows: "Oilcloth for floors, stamped, painted, or printed, and on all other oilcloth (except silk oilcloth), and on waterproof cloth not otherwise provided for, forty per centum ad valorem."

The present tariff act (in paragraph 369), above quoted, associates "oilcloth for floors," including "linoleum, corticene, and cork carpets," and "all other oilcloth (except silk oilcloth) and waterproof cloth, not specially provided for in this act."

The evidence shows that what is commercially known as "waterproof cloth" includes only such goods as have the interstices of the cloth filled up with rubber, oil, or other like material (*ejusdem generis* with others mentioned) so as to render the cloth impervious to both air and water, and to make them waterproof in fact, and not merely water repellent. The advertisement of the cravenette goods, so called, a copy of which was put in evidence at the hearing, designates the process, as well as the cloaks and cloths, as "rainproof," and undertakes to make a distinction between "the ordinary waterproofing processes," and "the cravenette system of rendering fabrics water repellent," and the assertion is there made that this new system "differs from all others." This fact, taken in connection with the further one that those goods have been imported only since the new tariff law went into effect, is persuasive of the conclusion reached, that they were never intended by Congress to be embraced in the term "waterproof cloth." They are "otherwise specially provided for in the act" as woolen and worsted cloths, women's and children's dress goods, and the like. This fact excepts them from paragraph 369.

Manufacturers testified before the board that worsted and other goods may be rendered water repellent by passing the fabric through solutions of castile soap and alum, heated to a high temperature, a recipe for which process is well known. It could be contended, with just as much reason, that the application of this old process to goods, accompanied by extensive advertisement and an appropriation of the name "waterproof cloth," would entitle them to be classified as such under said paragraph 369, as that the cravenette process would accomplish this result.

The cravenette goods are mere subdivisions of the general classes of worsted, silk, or cotton goods designated in the various schedules of the tariff act, and, as said by Judge Shipman (*In re* Claflin & Co., circuit court of appeals, 52 Fed. Rep., 121), "it must be evident that goods can not be withdrawn from the operation of a general classification, according to material, by designating them by particular names, which merely indicates a subdivision of the general class named in the statute."

The protests are all overruled, and the collector's decision in each case is affirmed.
(13792—G. A. 1986.)

NEW YORK, *February 6, 1893.*

ALUM-TANNED SHEEPSKINS WITH THE WOOL ON.—We find—

(1) That The Holt Manufacturing Company imported into the port of Chicago, June 24, 1892, 4 bundles of sheepskins with the wool on.

(2) That said skins have been alum-tanned, are not far enough advanced in the process of dressing to be pliable, but are still rough and stiff. That the wool thereon is from 3½ to 7 inches in length, washed but not scoured, and is wool of the second class.

(3) That said skins are not fur skins, nor furs dressed on the skin, nor dressed sheepskins.

(4) That the quantity of wool thereon was ascertained in accordance with the rules prescribed by the Secretary of the Treasury.

(5) That duty was assessed upon the quantity of wool found thereon at 12 cents per pound under the provisions of paragraphs 377, 384, and 387, N. T., and the skins were passed free.

Entry is claimed, under paragraph 444, at 20 per cent ad valorem as furs dressed on the skin, or under paragraph 456 as dressed sheepskins.

Upon these findings, which are based upon facts appearing in the papers and upon information received in the examination of numerous cases relating to furs dressed and undressed, we hold that duty was correctly levied upon the wool, and overrule the protest. **(13804—G. A. 1998.)**

NEW YORK, *February 8, 1893.*

BROKERAGE ON WOOL.—We find as facts that—

(1) The appellants imported into the port of New York certain third-class wool, purchased by them at Damascus or other principal markets of the country of exportation, and invoiced at a given price. In addition to the value of the merchandise *per se* certain items of charges, including brokerage, are specified in the invoice.

(2) Said item of brokerage was paid by the importers in these cases, and accrued before the merchandise was packed ready for shipment to the United States.

After further investigation concerning the nature and dutiable character of the charge for brokerage, which appears on many invoices, the board is of the opinion that a sweeping declaration that all such charges are dutiable would be erroneous, but such charges call for a careful examination and inquiry in order that the precise nature of the same and the circumstances under which they are made may be fully understood. If it appears that such a charge has been actually paid for services in effecting a purchase of wool at actual market value at a place which is one of the principal markets of the country from which such merchandise is shipped, and where such merchandise is found collected in quantities, and offered for sale in open market (as distinguished from the services of a traveling agent who goes about in the country from place to place purchasing and gathering the wool for the market in quantities sufficient for shipment), we are of the opinion that brokerage charged for services in such a market should be allowed as nondutiable, and although something may be required to be done after such purchase to put the merchandise in a condition ready for shipment, yet the brokerage should not be included among the dutiable charges, and on this point we modify our opinion as expressed in G. A. 1577, when the existing facts show that the brokerage charge accrued for services rendered in a market as aforesaid.

In conformity with these views, and on our findings of facts, we find as a matter of law that brokerage and inspection charges appearing on the invoices now under consideration do not form any part of the dutiable value of the merchandise covered by protest. The claim of the appellants in their protests is sustained and the collector's decision is reversed. **(13812—G. A. 2006.)**

NEW YORK, *March 7, 1893.*

SHEEPSKINS WITH THE WOOL ON.—We find—

(1) That Messrs. Parrott & Co. imported into the port of San Francisco per *Mariposa*, May 12, 1892, 29 bales containing 4,050 raw sheepskins with the wool on.

(2) That the quantity of wool was ascertained by shearing and shaving an average pelt and weighing the wool; that the average weight of the pelt was 3·26 pounds and the quantity of wool thereon ascertained as aforesaid was 1·63 pounds, equal to 50 per cent, and the same was of commercial value.

(3) That duty was assessed upon the wool according to the weight so ascertained at 11 cents per pound, the same being class 1, merino wool, and the skins were passed free of duty.

We have no evidence contradictory to the weigher's report of the weight of wool as returned, but by this test it is our opinion that the weight of wool returned is favorable to the importer, and that the percentage acted upon in a number of other cases of this importer considered simultaneously herewith was not only fair towards him, but liberal. It is manifest that upon importations of sheepskins with the wool on the exact weight can not be practically ascertained by any means in the power of customs officers; but in a number of cases investigated at New York, where it was claimed that percentages acted upon were too high, actual tests made by pulling have proved that the result obtained upon the percentage basis was a less number of pounds than the result of pulling, and we are satisfied from an examination of the results in this and other cases submitted to us by the same parties in interest, that if in any one case the weight according to the percentage applied appeared to them as slightly excessive, yet, in more cases by the same test the results appear to us as too low and the total weights ascertained by the application of the methods adopted by the customs officers for the ascertainment of the quantity of wool was on the whole favorable to the importer.

It is claimed in the protest that the skins are entitled to free entry under paragraph 605; that there is no wool of commercial value on the skins. Upon the facts this claim can not be sustained, and the protest is overruled. **(13886—G. A. 2039.)**

NEW YORK, *March 2, 1893.*

WORSTED AND COTTON SHAWLS EMBROIDERED.—We find in these cases from the exhibits that the goods covered by the protests are—

(1) Cotton shawls slightly embroidered with worsted, cotton the component material of chief value.

(2) Worsted shawls elaborately embroidered with silk, worsted the component material of chief value.

Said shawls are wearing apparel.

In G. A. 1061 and 1500 the board held that certain worsted shawls embroidered with silk were dutiable at the rate applicable to embroideries of the material composing the body of said shawls. The U. S. circuit court for the southern district of New York reversed the decision of the board, G. A. 1061. Judge Lacombe, in construing paragraph 373, N. T., held that the term therein, "materials of which they are respectively composed," referred to the materials composing the embroidery on wearing material and textile fabrics, and not to the materials composing the wearing apparel and textile fabrics. The U. S. circuit court of appeals recently affirmed the decision of the circuit court.

We therefore hold in the present cases that the worsted shawls are dutiable at 44 cents per pound and 50 per cent ad valorem under paragraph 392, as claimed by the appellants, and that the cotton shawls are dutiable at 50 cents per pound and 60 per cent ad valorem, in accordance with paragraphs 373 and 398, N. T.

The protests with regard to the worsted shawl are sustained and the collector's decision is affirmed as to the cotton shawls.

The views expressed in G. A. 1061 and 1500 are modified to conform to this decision. **(13878—G. A. 2031.)**

NEW YORK, *March 7, 1893.*

WOOL ON SHEEPSKINS.—We find—

(1) That Messrs. Harmell Bros. imported into the port of Hartford, Conn., May 6, 1892, thirty bales of raw sheepkins with the wool on.

(2) That said skins were from Buenos Ayres, and the quantity of wool thereon was ascertained in accordance with the regulations of the Treasury Department and returned at 54½ per cent of the weight of the pelts.

(3) That the samples officially drawn and furnished the board were carefully examined by the wool examiner at the U. S. appraiser's store in New York, and the quantity of wool thereon as found and stated by him to the board was 55 per cent of the gross weight. From this and numerous other actual tests caused to be made by the board upon protests where the correctness of the Treasury regulations have been questioned, we are of the opinion that the percentages fixed by the Department will be found to be generally more favorable to importers than actual tests by pulling. No complaint is made as to the rate of duty, but it is claimed that the weight of wool should have been returned at less than 54½ per cent and the skins should have been passed free.

The importers in this case do not seem to have been aggrieved, and the protest is overruled. (**13887—G. A 2040.**)

NEW YORK, *March 8, 1893.*

KNIT FABRICS, WEARING APPAREL.—We make the following findings of fact in these cases:

(1) That the goods in question were imported since October 6, 1890.

(2) That they consist of undershirts, drawers, hosiery, gloves, and other articles, made up wholly or in part on knitting machines or framed and composed chiefly or wholly of wool, worsted, the hair of the camel, goat, alpaca, or other animal.

(3) That all the goods in question are articles of wearing apparel.

The collector classified the goods in each case as articles of wearing apparel composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animal, and assessed duty thereon under the provisions of paragraph 396 of the new tariff act. The importers contend that the goods are more specifically provided for as "knit fabrics, and all fabrics made on knitting machines or frames," made wholly or in part of wool, worsted, etc., and as such are dutiable under the provisions of paragraph 392 of said act.

The board's decision of February 4, 1891 (G. A. 289), which sustained the importers' claim in a case similar to the present contention, was reversed by the circuit court for the southern district of New York (*In re* Arnold, 46 Fed. Rep., 510). The latter decision was recently affirmed by the Supreme Court of the United States in an opinion by Mr. Justice Brewer.

The Supreme Court held that the term "knit fabrics," as used in paragraph 392, was intended to embrace only such piece goods as are fabrics made on knitting machines or frames, other than ready-made clothing and other articles of wearing apparel, and accordingly decide that woolen and worsted knit goods, such as hosiery, undershirts, drawers, etc., were properly classified and assessed for duty as articles of wearing apparel under said paragraph 396, N. T.

Following that decision, we overrule all the protests and affirm the collector's decision in each case.

The protests as to the constitutionality of the act of October 1, 1890, are also overruled. (**13888—G. A. 2041.**)

TREASURY DEPARTMENT, *April 10, 1893.*

EAST INDIA WOOLS.—The Department is informed that sorted East India wools costing less than 13 cents per pound (other than Kandahar wools) are subjected at your port to a single duty of 32 per cent ad valorem, and not to double duty (64 per cent) prescribed by paragraph 383, N. T., on the ground, as explained by the appraiser, that such single duty being levied on the value of the wool in its sorted

condition results in a greater amount than the double rate on the unsorted value, and, consequently, that your practice is claimed to be in accordance with the rule stated in synopsis 12468.

It appears, however, from reports received from the collectors of customs at Philadelphia and New York, under dates of the 7th and 8th ultimo, respectively, that the value of such wools in the unsorted condition, as estimated by the appraiser at those ports (not less than 5½*d.* per pound) is sufficiently high to net a greater amount of duty at the rate of 64 per cent on such value than at the rate of 32 per cent on the sorted value, and, consequently, that they assess on such wools the double duty, as provided in said paragraph 383, and the alternate rule laid down in the above-cited decision.

In view of representations made to the Department that such difference of practice results in a discrimination against the importers of similar wools at New York and Philadelphia and in favor of those at your port, and in the absence of any authoritative standard for the determination of the foreign value of said wools in the unsorted condition, it is deemed advisable to accept the higher estimate for the purpose of determining the proper rate of duty, and you are therefore authorized to bring your practice into accord with that prevailing at the other ports, leaving the importers, if dissatisfied, to their remedy under section 14 of the act of June 10, 1890. (**13910.**)

TREASURY DEPARTMENT, *April 29, 1893.*

CLASSIFICATION OF THIRD-CLASS "SORTED" WOOL.—The Department is in receipt of a letter, dated the 24th instant, from the U. S. attorney for the southern district of New York, in which he reports that, on the 18th instant, the U. S. circuit court of appeals at New York rendered a decision in favor of the importers, *In re* E. S. Higgins & Co., involving the dutiable classification of third-class wool, affirming the decision of the U. S. circuit court for said district.

It appears that on April 2, 1891, the said firm imported, per *Teutonic,* certain gray, yellow, and white wools, washed, of the third class, which were classified by the collector, as follows: The gray and yellow, as wools of the third class, under the provisions of paragraphs 378, 383, and 385 of the act of October 1, 1890, which are as follows:

378. Class 3, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere, excepting improved wools hereinafter provided for.

383. The duty upon wool of the sheep or hair of the camel, goat, alpaca, and other like animals which shall be imported in any other than ordinary condition, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided,* That skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this act, imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

385. On wools of the third class and on camel's hair of the third class, the value whereof shall be thirteen cents or less per pound, including charges, the duty shall be thirty-two per centum ad valorem.

The white wool was classified as wool of the third class under said paragraph 378, as valued at over 13 cents per pound, under paragraph 386, which imposes a duty of 50 per cent ad valorem on wools of the third class so valued and sorted under said paragraph 383; and duty exacted on the gray and yellow wools at the rate of 64 per cent ad valorem, and on the white wool at the rate of 100 per cent ad valorem.

Against the exaction of duty at these rates the importers protested, claiming that the gray and yellow wools were dutiable at the rate of 32 per cent ad valorem only, and the white wools at the rate of 50 per cent ad valorem only, on the following grounds, viz:

(1) That the provisions of paragraph 383, relating to the subject of "sorting," are inapplicable to wools of the third class.
(2) That "sorting," within the meaning of said paragraph, includes only such manipulation of wools by the rejection of a part of the original fleece as may result in an increase of value, and that "sorts" composed of the inferior portions of the fleece can not be held liable to double duty even if those increased in value are so liable.
(3) That the grading of the wools by a separation of the fleece merely according to colors is not "sorting" within the proper signification of that word.
(4) That if liable to double duty as sorted wool, the duty should be double only on its value in an unsorted and not a sorted condition; and
(5) That the white wool had already been assessed with duty at the rate of 50 per cent ad valorem, amounting to three times that which would be assessed if said wool had been imported unwashed, and was, therefore, if sorted wool, within the provisions of paragraph 383, exempting wools from the double duty.

The case was accordingly taken to the Board of U. S. General Appraisers, under the provisions of section 14 of the act of June 10, 1890, and on August 4, 1891 (G. A. 797, Synopses 11692 and 13423), the board rendered a decision reversing that of the collector, whereupon an appeal was taken to the circuit court at New York, where the decision of the board was affirmed.

Under date of February 11, 1892, the U. S. Attorney-General advised this Department that, in view of the doubt entertained by him as to the correctness of the construction of the word "sorting" in paragraph 383, and in view of the general doubt which surrounds the clause by reason of the very awkward application of the paragraph to third-class wools, an appeal to the U. S. circuit court of appeals had been directed.

In the opinion handed down by the circuit court of appeals in this case the following language is used:

Upon the argument we expressed the opinion that the Board of Appraisers and the circuit court were correct in their conclusion that the gray and yellow wool was not "sorted" within the meaning of paragraph 383. This word is aptly defined in the return of the Board of General Appraisers: "Sorting, as usually defined, means that process preliminary to wool manufacturing necessary to fit the article for textile purposes, which consists in classifying by separation the fibers of the fleece as clipped from the sheep's body, according to length, fineness, elasticity, and soundness of staple. The wool varies in quality in different parts of the animal, as many as twelve or fourteen 'sorts' being sometimes obtained from a single fleece, but frequently not more than from five to seven qualities." This definition is sustained by expert evidence before the board and by technical works on manufactures, which they cite. It is in accord with the definition contained in the Report on Wool and Manufactures of Wool published by the Treasury Department September 6, 1889, and which was presumably known to the framers of the tariff act of 1890. The word is therein thus defined: "Sorts: The fleeces broken into narrower and more accurate subdivisions as to fineness, there being several qualities or sorts of wool in the same fleece." The phrase, "which has been sorted or increased in value by the rejection of any part of the original fleece" in paragraph 383, is coupled with the phrases, "imported in any other than ordinary conditions," "changed in its character or condition for the purpose of evading the duty," and "reduced in value by the admixture of dirt or other foreign substance," and the provisions for payment of double duty is in the nature of a penalty. In view of the fact that East India wool of this class, as the evidence shows, has always been packed abroad, separated as to color, and so imported, and of the further fact that, before the act of 1890 was passed, complaint had been made by the woolgrowers of this country of a practice that had grown up of taking third-class wool, separating the very finest parts of the fleece,

bringing them over here, and getting them through the custom-house as carpet wool, and then using them for the purpose of making clothing, there is additional warrant for the conclusion that Congress used the phrase "sorted wool" with the meaning understood by wool-dealers, viz: A breaking up of the fleeces to obtain a subdivision into grades, and not a mere separation by whole fleeces into colors, each fleece still containing the separate sorts of wool of which it was composed when sheared from the sheep's back.

There was no warrant, therefore, for classifying the gray and yellow wools here imported as "sorted," and therefore the double duty upon them was improperly exacted.

It is conceded that the white wool was not only separated by color, but also sorted in quality. As such it would be liable to the double duty imposed by paragraph 383, except for the proviso which excepts "wools" on which a duty is assessed, amounting to three times or more than that which would be assessed if said wool were imported unwashed.

The Board of Appraisers found, as a fact, that the duty already assessed at 50 per cent ad valorem on the white wool amounted to more than three times the amount to which it would have been subject if imported unwashed.

We find nothing in the record to call for a review of this finding of fact, and, it being a fact, there was no warrant for the imposition of the double duty. In the argument *ab inconvenienti* advanced by the district attorney, we do not find sufficient ground for restricting the proviso to those classes of wools (first and second class) upon which the statute assesses duty by the express term unwashed. If third-class unwashed wool were imported it would pay a duty easily ascertainable by multiplying the valuation by the ad valorem rate. When the statute also provides that, if the duty on the same wool washed is three times what it would be were the wool unwashed, there shall be no doubling on account of its being sorted, the language is plain and comprehensive of all wools, and there is no reason why it should be construed to have a different meaning from that which is expressed upon its face simply because it may not be convenient to ascertain the value of unwashed wool of the same class and grade as washed wool. The Board of Appraisers did not find the task impossible, and presumably the collector would have found it no more difficult. (Arthur *v.* Pastor, 109 U. S., 139.)

The decision of the circuit court is affirmed.

In view of the above, you are hereby authorized to take measures looking to a refund of the excess of duty exacted in this case, and you will apply these instructions to all similar cases pending at your port where the importers have duly protected their rights in the manner pointed out by the act of June 10, 1890. (**13940.**)

NEW YORK, *March 23, 1893.*

TRAVELING RUGS.—(1) The goods covered by this protest were imported into the port of New York subsequent to October 6, 1890, and consist of traveling rugs composed of mohair and cotton.

(2) Said goods are not portions of carpets or carpetings.

(3) Said goods are not fabrics in the piece, and are not wearing apparel, but are made-up articles not denominatively provided for in the present act, manufactured from a pile fabric, and of which wool, worsted, the hair of the camel, goat, alpaca, or other animal is the component material of chief value.

Duty was assessed upon said goods by the collector at 49½ cents per pound and 60 per cent ad valorem under paragraph 396, N. T., as pile fabrics. The appellants claim the same to be dutiable (1) as rugs assimilating to carpets or carpeting at 50 per cent ad valorem under paragraphs 407 and 408, N. T.; (2) at 44 cents per pound and 50 per cent ad valorem under paragraph 392 as manufactures composed wholly or in part of wool, worsted, hair of the camel, goat, alpaca, or other animals.

In our opinion the second claim of the appellants is well founded. Paragraph 396 provides for "plushes and other pile fabrics." We think this term means piece goods, and not articles made from plush or other pile fabrics. Such a construction of the statute would seem to be in harmony with the decision of the U. S. Supreme Court, *In re.* Arnold, touching knit fabrics, and also in harmony with decision of the U. S. circuit court of appeals, *In re.* Kursheedt Manufacturing Company. In the

last-named case the merchandise was dress facings manufactured from velveteen. The court said:

The real question in this case is whether the articles are the velveteens of paragraph 350 or a manufactured article. Concededly, if they are a manufactured article, they are a manufacture of cotton because they are made of velveteen, which itself is a manufacture of cotton. If they are specially provided for and excluded from the manufactures of cotton of paragraph 355 for that reason, it is because they are velveteens. * * * We think the evidence clearly shows that the articles in controversy have lost their commercial identity as velveteens and are a manufactured article.

We hold in the present case that the merchandise in controversy has lost its commercial identity as pile fabrics, and is a manufactured article specially enumerated and provided for in paragraph 392. To this extent the protest is sustained and the collector's decision is reversed. **(13964—G. A. 2069.)**

NEW YORK, *April 4, 1893.*

MASKS AND TOY MUSTACHES.—We find that the goods covered by this protest, as shown by the exhibits, are—

(1) Masks manufactured from a gauze-like cotton fabric stiffened with a starchy substance and painted to resemble the human face.

(2) Masks composed of paper or pulp and having attached thereto a flowing beard of white wool, paper or pulp the component material of chief value in said masks.

(3) Rude imitations of false mustaches, identical with those covered by G. A 1079. The merchandise was classified by the collector as manufactures of cotton and wool, respectively.

The appellants claim the same is dutiable at 35 per cent ad valorem, under paragraph 436, N. T., as toys, and alternatively that the masks and beards are dutiable at the same rate under paragraph 463.

Masks are used by children in play, but they are also used by adults for masquerading purposes. The preponderance of evidence taken in this case shows that these are designed for and chiefly used by adults. The Treasury Department under former acts ruled, and up to the date of the passage of the present act uniformly held, that articles of the kind in question were not toys. Congress does not seem to have regarded masks as toys, otherwise it would hardly have distinguished between toys and paper masks by providing therefor in the act of October, 1890, at the same rate of duty under paragraphs 436 and 463, respectively.

We hold that the several kinds of masks in question are not toys, and we overrule the protest and affirm the collector's decision as to the cotton masks. We sustain the claim of the appellants that the paper masks with beards of wool are dutiable at 35 per cent ad valorem under paragraph 463.

In our opinion, the term masks composed of paper or pulp includes such articles composed of mixed materials of which paper or pulp is the component of chief value. We also sustain the protest with regard to the mustaches. **(13975—G. A. 2080.)**

NEW YORK, *April 6, 1893.*

"SHETLAND VEILS."—The goods covered by this protest are invoiced as "White Shetland falls." These articles are loosely knit, and have scalloped edges surrounding a fancy knit border about 2 inches wide. In dimensions and form they are nearly a semicircle, 24 inches in diameter. The appellants claim that said goods are dutiable at 44 cents per pound and 50 per cent ad valorem, under paragraph 392, N. T., as knit shawls composed of wool, worsted, the hair of the camel, goat, alpaca, or other animal.

We find that—

(1) Said merchandise on or about October 1, 1890, and immediately prior thereto, was not commercially known as shawls, but was then and is now known in trade as "infants' falls," "infants' veils, or Shetland veils."

(2) Said merchandise is wearing apparel, not shawls composed of wool, worsted, the hair of the camel, goat, alpaca, or other animal, and is knit by hand or machinery.

On these findings, we hold the claim of the appellants is not well founded. The protest is overruled, and the collector's decision in assessing duty on the merchandise at 49½ cents per pound and 60 per cent ad valorem under paragraph 396, N. T., is affirmed. **(13979—G. A. 2084.)**

NEW YORK, *April 10, 1893.*

ROBES EMBROIDERED.—We find as facts in these cases that—

(1) The goods in question are invoiced as robes and are dress patterns composed wholly or in part of wool.

(2) Said dress patterns consist of two pieces of cloth of contrasting colors, one of which is plain and the other embroidered with silk or metal or both, or is ornamented with glass beads.

(3) These so-called robes are not manufactured wholly or in part, but are merely cut into suitable lengths to be manufactured into ladies' costumes or robes.

(4) Said merchandise weighs over 4 ounces to the square yard, and the greater part of the material is commercially known as women's dress goods, as is a manufacture of which wool, worsted, hair of the camel, alpaca, goat, or other animal is the component material of chief value, valued at above 40 cents per pound.

The collector assessed duty upon this merchandise at 60 cents per pound and 60 per cent ad valorem, in accordance with the provisions of paragraphs 373 and 398, N. T.

The appellants claim said merchandise is dutiable at 44 cents per pound and 50 per cent ad valorem under paragraphs 392, 394, or 395, N. T.

The board in G. A. 1066 decided that the value of the embroidered and plain materials comprising so-called robes, identical with these in question, should have been segregated by the appraiser and the separate kinds of merchandise classified and assessed with duty by the collector under the respective paragraphs of the present act which specifically provide therefor. This decision was affirmed by the U. S. circuit court for the southern district of New York (50 Fed. Rep., 465).

The circuit court of appeals for the second circuit, *In re.* Schefer, Schramm & Vogel, decided that wool or worsted shawls embroidered with silk were not subject to the rate of duty imposed upon embroideries composed of wool or worsted, and as none of the merchandise in question is embroidered with wool, worsted, the hair of the camel, goat, alpaca, or other animals, the necessity of segregating the value of these plain and embroidered fabrics would not seem to exist, inasmuch as but one rate of duty is applicable thereto.

We hold that the goods in question are dutiable at 44 cents per pound and 50 per cent ad valorem, as claimed by the appellants. To this extent the protests are sustained and the collector's decision is reversed.

The views expressed by the board in G. A. 888 and 1066 are hereby modified to conform to this decision. **(13983—G. A. 2088.)**

NEW YORK, *April 10, 1893.*

EMBROIDERED WOOLEN TABLE COVERS.—We find as facts in this case that—

(1) The goods covered by these protests are table covers and other made-up articles composed of wool, worsted, the hair of the camel, goat, alpaca, or other animal.

(2) Said articles are embroidered, by hand or machinery, with silk, metal, or some substance other than wool, worsted, the hair of the camel, goat, alpaca, or other animal.

(3) The rate of duty provided for said articles in paragraph 392 is greater than that provided for embroideries of the materials composing the embroidery on said articles.

Following the decision of the U. S. circuit court, second circuit, *In re.* Schefer, Schramm & Vogel, we sustain these protests and reverse the collector's decision. **(13984—G. A. 2089.)**

NEW YORK, *April 11, 1893.*

FUR-LINED GARMENTS.—We find that—

(1) The goods covered by this protest are ladies' cloaks composed of wool or worsted lined with squirrel fur and trimmed about the neck, sleeves, front, bottom, and back with black marten's fur.

(2) Said goods are manufactures of which fur is the component material of chief value, the value of the fur trimmings alone being greater than the value of the wool or worsted in said goods.

The collector assessed duty on these cloaks at 49½ cents per pound and 60 per cent ad valorem under paragraph 397, N. T.

The appellants claim the same are dutiable at 35 per cent ad valorem under paragraph 461, N. T. In our opinion the claim of the appellants is well founded. It will hardly be contended that fur cloaks lined withwool or worsted should be classified and assessed with duty under paragraph 397, and we can see no reason for holding that cloaks of which fur is the component material of chief value shall pay different rates of duty when fur forms the inside or outside of such garments. In the present case fur is a marked feature of the cloaks, and increases the value thereof to more than double that of wool or worsted cloaks of a corresponding quality, size, and fashion.

We hold that the goods in question are more specifically provided for under paragraph 461 than under paragraph 397.

The protest is sustained and the collector's decision reversed. **(13985—G. A. 2090.)**

TREASURY DEPARTMENT, *May 17, 1893.*

WHITE THIRD-CLASS WOOL.—The Department is in receipt of your letter of the 13th instant, inviting attention to the decision of the Board of General Appraisers (G. A. 2105), dated the 21st ultimo, wherein it is held that certain white third-class wool, invoiced at above 13 cents per pound, was sorted, and having been returned as worth 12 cents per pound in its condition before sorting, it was properly dutiable at the rate of 64 per cent ad valorem ("double duty") on its value in its unsorted condition, under the provisions of paragraphs 383 and 385 of the act of October 1, 1890.

You contend that inasmuch as the white wool in question, in the condition in which imported, was third-class wool, invoiced at above 13 cents per pound, it was properly dutiable at the rate of 50 per cent ad valorem under the provisions of paragraph 386 of the act of October 1, 1890, by virtue of the last clause of section 5 of the aforesaid act, which provides that "if two or more rates of duty shall be applicable to an imported article it shall pay duty at the highest rate," and you therefore request to be advised as to whether the aforesaid decision of the board should be challenged in the manner prescribed by law.

In reply I have to inform you that it is the opinion of the Department that the provisions for sorted wools contained in paragraph 383 of the act of October 1, 1890, are independent of the provisions of paragraph 386 of the said act, based on price and more specific, so that third-class wool valued at more than 13 cents per pound,

if sorted, will properly fall within the provisions of paragraph 383 rather than under paragraph 386. Two rates of duty not being applicable to the white wool of the third class herein under consideration, the case is not one falling within the last clause of section 5 of the act of October 1, 1890.

Referring to finding 4 of the aforesaid decision of the board, it appears that the said wool had been washed, and that the duty of 50 per cent ad valorem upon its invoiced value would not equal three times the duty upon said wool in an unwashed and unsorted condition. The decision of the board, holding the wool to be dutiable at the rate of 64 per cent ad valorem upon its unwashed and unsorted value, under the provisions of paragraphs 383 and 385 of the act of October 1, 1890, is therefore in harmony with the recent decision of the circuit court of appeals in the case of E. S. Higgins & Co.

The Department accordingly holds that no application for review should be filed under the provisions of section 15 of the act of June 10, 1890, in this case. (**14015.**)

TREASURY DEPARTMENT, *May 22, 1893.*

WOOL SAMPLES.—The Department has had under consideration several applications from importers of wool for relief from the immediate enforcement of Department's circular No. 28, of February 21, 1893, establishing standards for comparison in the classification of wool. It has been represented that the result of classification according to the new standards has, in many cases, thrown wools which have hitherto been held as of the third class into the first class, and that, in consequence, the duty has been largely increased. It is further contended that wools which had been ordered in ignorance of any impending change of the classification prevailing up to the issuance of said circular have in some cases been sold in advance of arrival at prices based upon the then prevailing rates of duty, and as a result of the change importers have been subjected to heavy loss without remedy.

On November 26, 1888 (Synopsis 9136), the Department in instructing the collector of customs at New York in regard to the classification of hat trimmings, which had been changed in consequence of conclusions arrived at by the appraisers, used the following language:

A change in the classification which has prevailed for so long a period of time should not be made except upon timely notice to all persons engaged in the business of importing and dealing in such merchandise, and, in the judgment of the Department, where it is made to appear to the satisfaction of the collector that the goods were ordered prior to the announcement of his decision changing the classification, the entry should be liquidated and the duty assessed according to the practice which prevailed before the change was made.

On January 10, 1891 (Synopsis 10587), in promulgating the new regulations regarding the valuation of foreign coins, in accordance with which certain currencies were subjected to a higher valuation, the Department said:

With a view, however, of affording relief to importers of merchandise from such countries * * * where it would seem that a great hardship would be imposed by immediately enforcing the said decision, * * * the Department has reached the conclusion that entries of importations made prior to April 1, 1891, from countries having such depreciated currency * * * may be adjusted by estimating the value of the currency in accordance with the consular certificate which may be attached to the invoice, provided that such value shall be returned as correct by the appraiser.

In accordance with the precedents thus established the Department has concluded to direct that entries of wool covered by invoices certified on or before May 1, 1893, shall be subjected to classification for duty in accordance with the rules which prevailed before the issuance of circular No. 28, and when it is found that under these conditions duties have been paid in excess, refund will be made of such excess. (**14026.**)

NEW YORK, *April 21, 1893.*

SORTED THIRD-CLASS WOOL.—We find—

(1) That Mr. Carl Grubnau imported into the port of New York, June 6, 1892, a quantity of East India wool, invoiced as 64 bales white Joria, at 8½*d.* per pound; 23 bales yellow Khelat, at 4½*d.* per pound, and 7 bales yellow Joria, 4½*d.* per pound and entered the same at the above values.

The appraiser returned all of said wool as wool of the third class, sorted, and the value in the original unsorted condition as 6*d.* per pound for the white Joria and 4*d.* per pound for the yellow Khelat and 6*d.* per pound for the yellow Joria, and its value in its present condition as specified in the invoice, and no appeal for a reappraisement was taken.

(2) That it appears by the invoice, and the fact is not questioned, that the value of the white wool in its condition as imported was 17 cents per pound and the value of the yellow 9 and 9½ cents per pound, respectively, and the appraiser's return in pence makes the value per pound of the white wool in its original unsorted condition to have been 12 cents per pound and the yellow Khelat to have been 8 cents per pound and the yellow Joria at 12 cents per pound.

(3) The collector assessed duty upon the white wool at the rate of 50 per cent ad valorem under paragraphs 378 and 386, N. T., upon the invoiced value of 17 cents per pound, which was its value in its present sorted condition, as per the invoice and entry and as returned by the appraiser, and duty was assessed upon the yellow wool at 64 per cent ad valorem upon its returned unsorted value of 8 and 12 cents per pound, respectively, under paragraphs 378, 385, and 383, N. T.

(4) It is substantially admitted by the importer, and we find upon the evidence, that the white wool has been sorted and increased in value by a rejection of some portion of the original fleece, and that the white wool of the fleece of this variety ordinarily embraces the better quality as to length, fineness, and elasticity of fiber. We also find that said wool had been washed, and that the duty of 50 per cent upon ts invoiced value would not amount to three times the duty upon said wool if it had been unwashed and unsorted. We also find that the duty of 50 per cent ad valorem upon its present value exceeds 64 per cent upon its unwashed and unsorted value.

(5) It is admitted by the importer that the yellow wool has been sorted as to color, but he claims that it has not been increased in value by the rejection of any portion of the original fleece, and therefore not sorted within the meaning of paragraph 383, N. T. We find that said wool has been washed and sorted by the selection or separation of the yellow wool from the original fleece, which contained wool of several colors, including white, said other portions of the fleece being rejected from this assortment, and the return of the appraiser as aforesaid upon the invoice shows that the yellow Joria has been decreased and the yellow Khelat has been increased in value by such separating and sorting.

(6) If we are authorized, upon a consideration of this protest, to review the return of the value of the wool in its original condition, as made by the appraiser, by excluding his return or appraisal, or accepting it as his advisory opinion only, then upon the evidence presented to the board we find that said yellow wool has not been increased in value over the average value of the original fleece, which included white wool from which the yellow was separated, and we also find the value of the white and yellow Joria wool in its original condition in the fleece to have been 12 cents per pound and of the yellow Khelat 11½ cents per pound.

(7) We find that said yellow wool was not imported in its ordinary condition, that is to say, in its original condition; that this wool does not contain the entire fleece, but is wool which had been washed upon the sheep's back, and upon which labor has been expended in separating the same from other portions of the fleece. We further find that wool of this kind, color, and condition has been customarily imported for many years, and that this particular wool has not been further manipulated or treated than has been the practice with this variety of wools as heretofore

imported, and in respect to such condition we find that this wool is in the ordinary condition of washed third-class wool assorted as to color, not changed in character or condition to evade duty, nor reduced in value by the admixture of dirt or any foreign substance; that it has been the customary practice for many years to import third-class wool washed and assorted as to colors.

The importer claims "that if the sixty-seven bales (white wool) are correctly returned as sorted, then the duty should be assessed at 64 per cent ad valorem on the value in the unsorted condition under paragraph 383 of the act of October 1, 1890." He also claims "that the thirty bales (yellow wool) are not sorted under the conditions provided for under said paragraph 383;" that "they are wools in the same ordinary condition that has been the practice for years, and that no portions of the fleeces have been rejected to increase the value of the balance," and claims "the duty at 32 per cent under the same paragraph as wools costing under 13 cents per pound, and desires to apply to our (his) benefit the rulings made by the Board of General Appraisers upon the subject."

We first consider whether the assessment of duty at 50 per cent ad valorem under paragraph 386, N. T., upon the white wool was lawful.

The solution of this question involves a consideration and determination of the value of the wool in its present as well as its original condition. If no regard is paid to its former condition, then its present value exceeding 13 cents per pound would make it dutiable as third-class wool at 50 per cent ad valorem. But this wool was sorted within the meaning of paragraph 383, N. T., and increased in value by the rejection of some parts of the original fleece. (*See* G. A. 797 affirmed, 50 Fed. Rep., 16, and since affirmed on appeal.) This is shown by the report of the appraiser, and is not denied by the importer. That the white wool of this variety embraces most of the best quality on the fleece there seems to be no doubt. The board has heretofore held, in G. A. 797, that paragraph 383 of the tariff applied to wool of the third class, and in the absence of the contents of paragraph 383 the proper rate of duty upon the white wool would unquestionably be 50 per cent upon its present value under paragraph 386, because the class and value of the wool as imported is exactly covered by the provisions of the latter paragraph. It appears, also, that this white wool is invoiced and entered at a value above 13 cents per pound. If duty is assessed upon its unwashed and unsorted value, such value per pound being less than its invoice, entered, and appraised present value, the sum of such 64 per cent duty would be less than the 50 per cent duty upon the invoice or present value, and the 50 per cent duty upon the present value would not exceed three times the duty on its original unwashed and unsorted value. Such an assessment of 64 per cent duty upon the unsorted value would apparently be made in disregard of the final paragraph of section 7 of the act of June 10, 1890, which provides that "the duty shall not be assessed upon an amount less than the invoice or entered value."

The act of October 1, 1890, was enacted at a later date than the act of June 10, and by its provisions (section 55) all laws and parts of laws inconsistent with this act are repealed. If, therefore, the duty in this case is assessed under paragraph 383, such duty must be based upon the value of the wool in its unsorted condition (Arthur *v.* Pastor, 109 U. S., 139), and it is not a case where two or more rates of duty become applicable, viz, 64 per cent upon the unsorted value or 50 per cent upon its present value, because its unsorted value being less than 13 cents fixes its dutiable status under paragraphs 383 and 385. Paragraph 383 seems, therefore, to be one instance where it is specially provided that, upon certain wool like this, the duty must be assessed without regard to the final paragraph of section 7 of the act of June 10, 1890, and the rate specially fixed is twice the duty to which it would be subject in its unsorted condition, to wit, 64 per cent ad valorem (the wool in its unsorted condition being valued at less than 13 cents per pound, and the rate for such wool being 32 per cent ad valorem under paragraph 385).

The yellow Khelat wool appears, by the appraiser's return, to have been increased in value by the assorting to which it has been subjected. The provisions of para-

graph 383 impose twice the duty to which wool would be otherwise subject if it is sorted or increased in value by the rejection of any part of the original fleece. The value necessarily ascertained upon which to assess the double duty is the value of such wool, if unsorted, in the original fleece. All such values must needs be the market value, and such market value in its condition packed ready for shipment at the time and port of exportation. (*See* section 19, act of June 10, 1890.) It is argued, therefore, that the duty of the appraiser in the premises is commensurate with the requirements of the law, and that, when he returned this wool in its present condition as valued at 4¼*d.* per pound, as per invoice, and in its unsorted condition at 4*d.* per pound, both values, unless an appeal for a reappraisement was taken, became conclusive as to all subsequent procedure.

Under the decision of the Supreme Court in Arthur *v.* Pastor, the dutiable value is the value in the unsorted condition, and by section 2950, Revised Statutes, not repealed in section 29 of the act of June 10, 1890, the certificate of an appraiser of the dutiable value of merchandise is an appraisement thereof. If this is not so, then the circuit court of appeals, instead of a board of general appraisers, is the final tribunal for determining the value of wool in its original unsorted condition, and the market values of sorted wool, as it was before sorting, will not be determined by appraisal, but by the trial of an issue at law. Therefore, if we accept the appraisal as conclusive in this case, the yellow Khelat wool, by the separation and selection, has been increased in value and must be held as "sorted and increased in value by the rejection of some portion of the original fleece," and so becomes subject to twice the duty on its value in its original unsorted condition, as returned by the appraiser, to wit, 64 per cent on 4*d.* per pound.

Applying the same reasoning to the white Joria wool, which the appraiser's return shows is decreased in value by being separated and selected or rejected from the original fleece, it is not sorted because, as held by the board in G. A. 797, it is not increased in value, and is not subject to the provisions of paragraph 383, but is dutiable under paragraph 385 at the single duty of 32 per cent ad valorem on the invoiced value.

We are impressed with the force of the foregoing argument, but as opposed to it are the following considerations:

Questions of classification and rates of duty are for the collector to decide. It is therefore exclusively within the province of the collector to determine the nature and condition of the merchandise when he is required to fix the rate of duty. It is in this case the business of the collector to decide whether the wool is sorted or increased in value by the rejection of any portion of the original fleece. If he finds in the affirmative, it then becomes necessary for him to ascertain the original value of the wool, and the finding of this fact requires notice to be taken, first, of the evidence of its present value, which is conclusively fixed by the appraiser; second, by satisfactory evidence of the value of the wool in its original condition, to be obtained by the collector from any proper source. If he decides that the present value of the wool exceeds its original value, by the same evidence he will ordinarily ascertain its original value, and upon that assess the double duty. This last proposition does not seem to have been specially passed upon by the courts in any adjudicated case as reported, but as the ascertainment of the former value is necessarily involved in the settlement of the question of proper classification, it seems to us that the law commits the determination of all the foregoing facts to the collector, except the one point of the ascertainment of the present value of the merchandise, which is exclusively within the province of the appraiser.

We feel authorized, therefore, to disregard the return of original value as made by the appraiser, and to act upon our findings based upon all the evidence before the board.

We therefore sustain the claims of the protest that the white wool is dutiable at 64 per cent ad valorem on its value in its unsorted condition, as stated in our sixth

finding, to wit, 12 cents per pound, and that the yellow Joria and yellow Khelat wool is dutiable at 32 per cent ad valorem upon its invoice and entered value, being its present appraised value. The protest is sustained and the entry should be reliquidated accordingly. **(14054—G. A. 2105.)**

NEW YORK, *April 26, 1893.*

VELVET RIBBONS.—We find that the goods covered by this protest are silk velvet ribbons of usual lengths varying in width from about one-half of 1 inch to 3 inches, and containing, exclusive of selvages, less than 75 per cent in weight of silk.

The collector assessed duty on these goods at $1.50 per pound and 15 per cent ad valorem under paragraph 411 of the present act. The appellant claims said goods "do not belong to a class of articles commercially known as pile fabrics, and that they are dutiable at only 5 per cent ad valorem under paragraph 414, act of October 1, 1890." In our opinion the appellant's claim is not well founded. Paragraph 411 provides for velvets denominatively, and we can not find the goods in question are anything more than velvet. The term velvets we think includes all descriptions of velvet in the piece, and does not apply exclusively to any one of the several classes of goods known in trade by the descriptive name of velvet dress goods, "millinery velvet," or "velvet ribbons," etc. At any rate, the merchandise in question falls under the designation of pile fabrics. It is a fabric in the piece, has an upright pile with a smooth surface, and belongs to a class of goods known in trade as pile fabrics. In accordance with these views and on our findings, we overrule this protest and affirm the collector's decision. **(14061—G. A. 2112.)**

NEW YORK, *April 26, 1893.*

PAINTERS' TAPESTRY OR UPHOLSTERERS' CANVAS.—The merchandise in this case is known as painters' tapestry or upholstery canvas. It is composed of wool in the weft and cotton in the warp, and is similar to the goods covered by G. A. 1064. The cotton in this fabric is of fine quality and is twisted into a very coarse thread, there being about 15 of these threads to the inch. The wool filling consists of fine threads, about 60 to the inch. The finished fabric resembles corded or rep goods. In the decision referred to, the board found that cotton was the component of chief value. In the present case we reach a different conclusion. We find as facts from an analysis of the chemist in charge of the United States laboratory at New York and the testimony of competent witnesses—

(1) That the quantity of wool is slightly greater than cotton in said merchandise.

(2) The value of the cotton in said merchandise is about 32 cents per pound and the wool 42 cents per pound, wool being the component of chief value therein.

On these findings, we overrule the claim of the appellant that the goods in question are dutiable as cotton cloth or as manufactures of cotton, and affirm the collector's decision in assessing duty on the same at 44 cents per pound and 50 per cent ad valorem under paragraph 392, N. T. **(14062—G. A. 2113.)**

NEW YORK, *May 3, 1893.*

WOMEN'S AND CHILDREN'S DRESS GOODS.—The merchandise in question was classified by the collector as pile fabrics composed wholly or in part of wool, and was assessed with duty at 49½ cents per pound and 60 per cent ad valorem under paragraph 396, N. T. The appellants claim said goods are woolen dress goods, and as such dutiable at 44 cents per pound and 50 per cent ad valorem. These goods are composed of cotton in the weft, and cotton and wool, and silk, cotton and wool in the warp. The woolen warp threads are woven in the fabric at regular distances

apart and are looped and cut, forming a surface pile, the finished fabric resembling corduroy. There is no controversy as to the facts in this case, and we find—

(1) That the merchandise is commercially known as women's and children's dress goods and also as pile fabrics.

(2) That it is composed wholly or in part of wool and weighs over 4 ounces to the square yard.

Standing alone, the terms of either paragraphs 395 or 396 would cover these goods, therefore, as two rates of duty are applicable thereto, we are called upon to decide under which of the two paragraphs named they should be classified. In our opinion the merchandise is more specifically provided for as pile fabrics than as dress goods. Paragraph 395 provides for many kinds of textile fabrics composed of wool, and if not otherwise provided for imposes duty thereon, when weighing over 4 ounces to the square yard, at the rate named for manufactures of wool not specially enumerated, whereas paragraph 396 imposes a greater rate of duty for articles of clothing and wearing apparel and two particular kinds of textile fabrics, namely, felts not woolen and pile fabrics. The intent of Congress to exact a higher rate of duty on all pile fabrics composed of wool than upon the other wool dress goods, is, we think, manifest, and for the purposes of this case the tariff may be construed as if reading: All women's dress goods weighing over 4 ounces to the square yard composed wholly or in part of wool shall pay 44 cents per pound and 50 per cent ad valorem, except pile fabrics, which are specially provided for in paragraph 396 and subject to duty thereunder at 49½ cents per pound and 60 per cent ad valorem.

In accordance with these views, we overrule the protest and affirm the collector's decision. (**14068—G. A. 2119.**)

TREASURY DEPARTMENT, *June 28, 1893.*

DRAWBACK ON SCOURED WOOL.—The Department is in receipt of your letter of the 20th instant, relative to the application of Mr. A. Woodbury for an allowance of draw-back under the provisions of section 25 of the act of October 1, 1890, on wool imported in the grease and exported scoured.

The question presented in this case is whether or not scoured wool produced from imported raw wool may properly be considered as an "article manufactured or produced in the United States" within the contemplation of said law.

Upon a consultation with the Solicitor of the Treasury the Department concurs with you in the opinion that the question must be answered in the negative, and the application is therefore denied. (**14127.**)

NEW YORK, *May 10, 1893.*

EMBROIDERED WORSTED HAT CROWNS.—(1) The goods in question consist of pieces of wool or worsted cloth, designed for use in the manufacture of ladies' or children's hats and known in trade as "hat crowns."

(2) These articles are ornamented or embroidered with glass beads and metal threads, but have undergone no further process of manufacture than to be ornamented with suitable designs and cut into sizes for use as hat crowns.

On these findings we hold that the merchandise is not wearing apparel wholly or partly manufactured. Nor is it subject to duty as wool or worsted embroidery, inasmuch as the material composing the embroidery is not wool, worsted, the hair of the camel, goat, alpaca, or other animal. We sustain the claim of the appellants that said merchandise is dutiable at 44 cents per pound and 50 per cent ad valorem under paragraph 392, N. T.

The collector's decision is reversed. (**14130—G. A. 2129.**)

NEW YORK, *May 16, 1893.*

GLORIA CLOTH, BORDERED.—We find that—

(1) The merchandise in this case is commercially known as "gloria cloth," and that it is composed of wool or worsted in the weft and cotton in the warp.

(2) Said goods have a bordered edge, and are used in the manufacture of umbrellas and in making women's and children's dresses.

(3) Said merchandise is women's and children's dress goods, or goods of similar character and description.

In G. A. 1044 (affirmed by the circuit court for the southern district of New York) the board decided that gloria cloth without borders was dutiable under paragraph 394 or 395. We now hold that cotton-warp gloria cloth with borders is dutiable under the appropriate provisions of paragraph 394, N. T.

The protest is sustained and the collector's decision is reversed. **(14,138—G. A. 2137.)**

NEW YORK, *May 16, 1893.*

SILK AND WOOL BRAID, SILK CHIEF VALUE.—The goods in question are fancy braids composed of silk, wool, felt not woven, and cotton, and from an analysis we find further that silk is the component material of chief value therein. The collector does not contend that silk is not the component material of chief value in these goods, but says that inasmuch as they are manufactures of which wool or hair of the camel, goat, alpaca, or other like animal, is component material, he assessed duty therein at 49½ cents per pound and 60 per cent ad valorem under paragraph 396, in accordance with the proviso to paragraph 414, N. T.

In our opinion the collector erred in classifying the goods as he did; merchandise that is covered by the proviso to paragraph 414 would seem to be dutiable at 44 cents per pound and 50 per cent ad valorem under paragraph 392 as manufactures of wool. We do not think that this proviso relates to any manufactures of silk other than such as would be dutiable under paragraph 414, if wool, worsted, the hair of the camel, goat, alpaca, or other like animal, were not a component material thereof. The goods in question are not of such a character; they are braids made of silk, or of which silk is the component material of chief value, and are specifically provided for under paragraph 412, as claimed by the appellants.

The protests are sustained and the collector's decision is reversed. **(14139—G. A. 2138.)**

NEW YORK, *June 7, 1893.*

EMBROIDERIES, WOOL—MADE-UP EMBROIDERED ARTICLES NOT.—"TEXTILE FABRICS," AS USED IN THE TARIFF, APPLIES ONLY TO PIECE GOODS. EMBROIDERED "DJIDJIMS" OR PORTIERES, WOOL CHIEF VALUE.—We find—

(1) That Mr. M. B. Mihran imported into the port of San Francisco October 17, 1892, certain portieres upon which duty was assessed at 60 cents per pound and 60 per cent ad valorem under paragraph 398 and the proviso of paragraph 373, N. T.

(2) That the portieres in question are known as "Djidjims," and are composed of five selvaged strips of coarse cotton and wool cloth, about 12 inches wide, of different colors, sewed together and fringed at both ends. The portiere is rudely embroidered by hand with wool or worsted along the edge and seams and also in regular figures or designs repeated on each strip.

(3) Wool, worsted, or the hair of the camel, goat, alpaca, or other like animal is the component material of chief value of the foundation cloth and embroidery, and all of the embroidery on the strips may have been complete before they were sewed together.

The importer claims said merchandise to be dutiable under paragraph 392, N. T., as a manufacture of wool or worsted not specially provided for.

To decide this case we must construe the meaning of the word embroideries as used in paragraph 398, and the words textile fabrics in the proviso of paragraph 373. It has been claimed that the word "embroideries," in paragraph 398, is commercially limited to such embroidered material as is adapted to be made up into articles. This is apparent from the use of the word in paragraph 373, where articles embroidered by hand or machinery are mentioned and apparently distinguished from embroideries enumerated in the first line with laces, edgings, insertings, etc.

Aside from articles of wearing apparel and textile fabrics, we do not find in either paragraph any embroidered articles composed of wool or worsted specifically provided for unless they are to be considered as covered by the provision for textile abrics in the proviso of paragraph 373.

The U. S. circuit court of appeals at New York has held in substance that articles made from textile fabrics are not textile fabrics, but that the latter term applies to piece goods.

It would therefore seem that the portieres in question are not elsewhere specially provided for and are dutiable as claimed.

The protest is sustained. **(14169—G. A. 2168.)**

TREASURY DEPARTMENT, *July 3, 1893.*

NO DRAWBACK ON CARBONIZED WOOL.—The Department duly received your letter of the 20th ultimo, relative to the application of Mr. F. Hartley for an allowance of drawback under the provisions of section 25 of the act of October 1, 1890, on wool imported unwashed and exported after having been "put through a process of carbonizing."

From the statement of the applicant it appears that said process of carbonizing results merely in the removal of vegetable matter from the imported wool.

The Department therefore concurs with you in the opinion that the wool so carbonized is not entitled on exportation to drawback under the provisions of the law referred to.

The application is therefore denied. **(14183.)**

NEW YORK, *July 13, 1893.*

THIRD-CLASS WOOL.—The protests relate to wool of the third class imported since October 5, 1890, at New York and Philadelphia, at the dates and by the parties specified in the schedule annexed.

The varieties of wool specially passed upon, the dates of importation, and the invoiced prices are substantially as follows: White Joria, April, 1891, 8¼*d.* to 9½*d.*; white Joria, April, 1891, 10¼*d.* to 10¾*d.*; white Vicanere, April, 1891, 7¼*d.*, 8 to 8½*d.*; white Jesselmere, April, 1891, 7¼*d.* to 7½*d.*; white Kandahar, September, 1891, and December, 1892, 7¾*d.* to 9*d.*; white East India, September, 1892, 3*d.* to 5½*d.*; yellow Vicanere, December, 1892, 5¾*d.* to 8¼*d.*; yellow Packpathen, July and December, 1892, 5¾*d.* to 8¼*d.*; yellow Kandahar, December, 1892, 5¾*d.*; yellow Khelat, July and August, 1892, 4*d.* to 5*d.*; yellow Khorassen, August, 1892, 4¾*d.*; yellow Mahrwar, August, 1892, 4¼*d.*; gray Kandahar, April, 1891, 5¼ to 5¾*d.*; gray Kandahar, August, 1891, 4*d.* to 5*d.*; gray Kurachee, October, 1891, 3¼ to 3¾*d.*; together with wools invoiced as common white, gray, or yellow East India at various prices from ¼*d.* to 6*d.* per pound.

The wools which range in invoiced value above 13 cents per pound were assessed for duty, at different periods, either at 100 per cent on the invoiced value as sorted wool or at 50 per cent on the invoiced value as sorted wool when 50 per cent was higher than 64 per cent upon the unsorted value, and the wools of an invoiced value under 13 cents were assessed for duty at 64 per cent on the invoiced value, or at the same rate upon the returned unsorted value.

The several importers claim variously that their wool is not subject to double duty by virtue of paragraph 383, N. T., or that in the higher priced wools duty should be assessed at 64 per cent upon the unsorted value, together with sundry claims such as are set forth in G. A. 797 and 2105, such as that the wool is not sorted or increased in value by the rejection of any portion of the original fleece, etc. We have taken occasion to make a very minute investigation in these cases, because of conflicting testimony in other cases and the difficulty which has occurred in securing uniformity in the classification and assessment of duty upon third-class wools imported in a condition other than in whole fleeces in the grease or unwashed. A careful ascertainment by local appraisers and collectors of the unwashed value of the original fleeces has been omitted in many of the cases here passed upon, as indicated by the absence of any reports thereon. The importance of this step is manifest when we consider that it is an essential factor in determining the question whether the duty must be doubled upon the unsorted value of the wool which is shown to be sorted, or increased in value by the rejection of any portion of the original fleece. For instance, if the invoiced value of sorted third-class wool is 8½*d.*, in the absence of paragraph 383 the duty would be 50 per cent ad valorem. In paragraph 383 it is provided that wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. These so-called sorted East Indian wools are sometimes washed more or less thoroughly on the sheep's back, and sometimes washed or scoured after sorting, but they are also very generally subjected to a picking-over, called garbling, by which the coarse dirt and extraneous matter are removed more thoroughly than by any washing to which they might be subjected before shearing. If the shrinkage in weight, which would be due to any washing on the sheep's back or to scouring after sorting, together with the removal of the quantity of dirt or sand by handling, is fully taken into account, it will be found that the difference between the original average value of the unwashed fleece from which the 8½*d.* wool is obtained and the present value is very considerable. While the original value can not be obtained with absolute accuracy, yet experts in the business are able to approximate values so closely that for practical purposes the estimates of numbers will substantially agree. Taking into account its present clean condition, we have found upon evidence that the original unwashed value of this 8½*d.* wool in the fleece was approximately 4*d.* The duty upon such unwashed wool valued at 4*d.*, at 32 per cent ad valorem, amounts to 0.0256 cent per pound, while the duty upon the sorted invoice value of 8½*d.*, at 50 per cent ad valorem, amounts to 0.085, which is more than three times the duty upon the unwashed value, and therefore the duty upon this wool is not to be doubled.

Applying the principles for the construction and application of paragraph 383 as we now understand them to be, we find that the lowest valued wools covered by these protests are not increased in value by the rejection of any portion of the original fleece, and, as to the higher price wools, that the duty based upon their invoiced value exceeds thrice what would be the duty upon said wool if unwashed and in the original fleece. The ascertainment of values is of the first importance, and when these values are correctly ascertained the cases will be comparatively rare where, upon East Indian wools of the varieties above mentioned, it will be necessary to impose rates of duty other than 32 per cent or 50 per cent upon the present appraised value. We are led to believe, from information obtained at a recent date, that much of the yellow and gray wools imported are found in entire fleeces; that the gray and yellow wools found in the same fleeces with white wool constitute but a small percentage of the entire fleece, and that the value of the finer portions of a fleece, when in the original unwashed condition, does not exceed much, if any, the value of the coarser wool in the some fleece, because it is said that the finer wool usually carries a very large percentage of dirt and foreign matter, and is therefore subject to a greater percentage of shrinkage than the coarser portions. The fact that an invoice

contains gray or yellow wool does not necessarily indicate that such colors have been separated from white wools of a fleece, because entire fleeces of these colors are found and graded in colors, but this does not change the fact that fleeces containing white, yellow, and gray are broken up and portions of the same increased in value by sorting, or the rejection of parts of the fleece in making the assortment.

We find that the wools covered by these protests are not subject to any of the conditions contained in paragraph 383, N. T., whereby the duty should be doubled, and the protests are sustained to the extent of the claims that said wools are subject to single duty of 32 or 50 per cent ad valorem, accordingly as the invoiced value shows that the same are subject to said rates as we have specified in the schedule. All other claims in the protests in conflict with these conclusions are overruled. **(14243—G. A. 2207.)**

TREASURY DEPARTMENT, *July 18, 1893.*

WOOL SAMPLES.—Department's circular of February 21, 1893 (No. 28), is hereby amended as follows:

Omit from class 1, on page 2—

149. Flamantine-skin wool.
150. Flamantine-skin wool.
179. Kassapbatchia-skin wool, second quality.

Add to class 3, on page 3—

396. Servian-skin wool.
397. Servian-skin wool.
398. Kassapbatchiai-skin wool, second quality.

Omit altogether from cabinet—

145. Turkey improved, fleece unwashed. **(14197.)**

NEW YORK, *July 18, 1893.*

ICE-WOOL SQUARES.—The local appraiser at Chicago reports that the merchandise in question "consists of ice-wool squares and ice-wool fascinators, used as coverings for the head and neck and incidentally for the shoulders."

The goods were classified and assessed for duty by the collector under paragraph 396 of the new tariff act as articles of wearing apparel made of wool or worsted.

It is claimed by the importers that the goods are dutiable under paragraph 392, which imposes certain specified rates of duty on "woolen or worsted cloths, shawls, knit fabrics, and all fabrics made on knitting machines or frames, and all manufactures of every description made wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals not specially provided for in this act."

We find as facts, from the testimony taken in the case, as follows:

(1) The articles (except the so-called fascinators) are known commercially as "ice-wool shawls," and are made of Angora wool, possibly with an admixture of an insignificant quantity of vegetable fiber, being manufactured on knitting machines or frames.

(2) They are articles of wearing apparel and are worn both on the head and on the shoulders, but chiefly on the shoulders.

We find as matter of law that the merchandise is provided for *eo nomine* in paragraph 392, "shawls * * * made of wool (or) worsted," and that this special enumeration takes them out of the more generic description of woolen wearing apparel in paragraph 396. The decision of the U. S. Supreme Court in the case of Arnold, Constable & Co., *v.* The United States, 13 Sup. Ct. Rep., 406 (affirming the same case in 46 Fed. Rep., 510), presented a question entirely different from the one raised by the present protests.

The examiner of woolen and worsted goods at the port of New York, who testifies as a witness before the board, discloses the fact that the articles under consideration are uniformly assessed for duty at this port as worsted "shawls," under paragraph 392, as claimed by the protestants.

The protests covering these goods are accordingly sustained in each of the cases, and the collector's decision is reversed, with instructions to reliquidate the entries. The protests claiming the so-called fascinators to be shawls are formally abandoned, and the collector's decision classifying these articles as wearing apparel is affirmed. (**14251—G. A. 2215.**)

NEW YORK, *July 27, 1893.*

WOOLEN ROBES OR DRESS PATTERNS.—The merchandise covered by this protest is embroidered and plain robe patterns composed of wool and commercially known as women's and children's dress goods. This merchandise is identical with that covered by G. A. 888. We find the facts to be substantially the same as set forth in said decision. Had the appellants claimed that no part of said goods were dutiable at the rate applicable to worsted embroidery we would have sustained the protest (provided the material composing the embroidery was silk) in accordance with the decision of the circuit court of appeals for the second circuit *In re* Schefer, Schramm & Vogel. The appellants having claimed redress only as to a part of the merchandise, in accordance with the principle enunciated in G. A. 888, affirmed by the circuit court of appeals for the second circuit, we sustain the protest and reverse the collector's decision.

The protest as to the constitutionality of the act of October 1, 1890, is overruled. (**14302—G. A. 2231.**)

TREASURY DEPARTMENT, *August 3, 1893.*

SORTED WOOLS.—Referring to so much of your letter of the 5th ultimo as relates to the difficulty of ascertaining the dutiable value of sorted wools, which may be liable, under the principles enunciated in the decision of the United States circuit court of appeals (Synopsis 13940), to a double duty on the value in their unsorted condition, I inclose herewith a copy of a recent decision of the Board of United States General Appraisers (G. A. 2207), wherein it is stated that, "while the original value can not be obtained with absolute accuracy, yet experts in the business are able to approximate the values so closely that for practical purposes the estimates of numbers will substantially agree."

As to the scope of the said decision of the court and the Department's instructions of the 3d and 30th of June last, you are informed that said decision and instructions are applicable to all sorted wools, irrespective of invoice value, and that it is therefore the duty of the collector to ascertain in all cases of sorted wools the original value in their unsorted condition. (**14266.**)

NEW YORK, *September 21, 1893.*

SCOTCH HASLOCH WOOL, WASHED BUT UNSORTED.—We find that the H. B. Claflin Company imported into the port of New York May 10, 1893, certain Scotch Hasloch wool, which the appraiser returned as third-class wool washed and sorted, its present value 15¼ cents per pound, its washed and unsorted value 14 cents per pound, and unwashed and unsorted value 11 cents per pound. Upon evidence taken on protest No. 19085 and in other cases concerning wool of this identical kind and in like condition, we find that this is wool of the third class washed and unsorted. The col-

lector assessed double duty, amounting to 100 per cent, upon its returned washed and unsorted value. The importer claims it is not washed and sorted, and therefore not subject to the double duty. If we had found the wool to be sorted the decision of the collector would have been affirmed, but upon the facts found the protest must be sustained. **(14453—G. A. 2299.)**

TREASURY DEPARTMENT, *September 23, 1893.*

DRAWBACK ON WILTON RUGS.—On the exportation of Wilton rugs manufactured by Harrison Townsend, of Norristown, Pa., in part from worsted yarns, manufactured by James Lees & Son., of Bridgeport, Pa., from imported unwashed Persian wool, a drawback will be allowed equal in amount to the duties paid on the imported wool, less the legal deduction of 1 per cent.

The quantity of yarn used in the manufacture shall be determined by allowing $72\frac{4}{10}$ pounds of such yarn for every 100 pounds of the net weight of the exported rugs, as ascertained by the United States weigher, and the quantity of the wool entering into the manufacture of such yarn and entitled to drawback shall be determined by allowing for each 100 pounds of the yarn 300 pounds of the wool, less as many pounds thereof as are equal in value to 50 pounds of noils and waste, according to the values of wool, noils, and waste, which shall be stated in the requisite certificate of the manufacturer of the yarn, subject to verification by the collector.

Whenever ordered by the collector, samples of the rugs entered for export will be taken by the inspecting officer and submitted to the appraiser for verification of the percentage of yarn contained therein. **(14366.)**

TREASURY DEPARTMENT, *November 22, 1893.*

DRAWBACK ON WOOL.—On the exportation of Brussels and Wilton carpets and Assyrian rugs manufactured by M. J. Whittall, of Worcester, Mass., in part from worsted yarn made from imported unwashed Scotch, Syrian, and Persian wools in equal quantities, a drawback will be allowed equal in amount to the duties paid on the wools used in the manufacture, less the legal deduction of 1 per cent.

The total quantity of the wools so used shall be determined as follows: Allow for each running yard, 27 inches wide, of the carpets designated as Victoria Wilton, 6.498 pounds; Victoria Brussels, 4.223 pounds; Whittall Brussels, 4.061 pounds, Edgworth Brussels, 2.931 pounds, and for each Assyrian rug, 54 inches long and 27 inches wide, 12.635 pounds; provided that the quantity of worsted yarn contained in each running yard of the carpets shall not be less than 1.797 pounds in the Victoria Wilton, 1.172 pounds in the Victoria Brussels, 1.125 pounds in the Whittall Brussels, and 0.812 pound in the Edgworth Brussels, nor less than $3\frac{1}{2}$ pounds in each Assyrian rug.

Whenever ordered by the collector samples of the carpets and rugs entered for export shall be taken by the inspecting officer and submitted to the appraiser for verification of the quantities of worsted yarn contained therein. **(14488.)**

a Includes total wool free of duty under reciprocity treaty, which can not be distributed by districts.
b Quantity estimated. *c* Value of wool pelts and estimated quantity of wool thereon.

IMPORTS AND DUTIES, 1821—1866.

General Imports of the Principal and all other Manufactures of Wool into the United States, and the Estimated Amounts of Duties Collected on the same, 1821 to 1866.

NOTE.—Most of the classes of goods named in the various tariffs are enumerated in this table. The blanks under many of the classes do not indicate that there were no importations of such goods, but that, under the different phraseology of the several acts, on importation they were described and returned under some more general head, as "all other manufactures of wool," etc. Duties are estimated on the general imports and not on the net imports of manufactures of wool.

NOTE.—The kinds of wool embraced in each of the classes of wool are prescribed by the tariff as follows:

Class 1, clothing wools: That is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes 2 and 3.

Class 2, combing wools: That is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the alpaca, goat, and other like animals.

Class 3, carpet wools and other similar wools: Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

IMPORTS AND DUTIES, 1867–1883.

Wools, hair of the alpaca, goat, and other like animals. *a*	Year.	Rates of duty.	Quantities.	Values.	Amount of duty received.	Average value per unit of quantity.	Average duty reduced to ad valorem.

IMPORTED WOOL, AND MANUFACTURES OF, ENTERED FOR CONSUMPTION IN THE UNITED STATES DURING THE YEARS ENDING JUNE 30, FROM 1881 TO 1893, INCLUSIVE.

NOTE.—The following table covers the imports for consumption under the tariff laws of 1883 and 1890. The changes made in classification by the act of 1890 make it impossible to give an exact comparison or similarity of statement under the two acts. In using it, therefore, it should be borne in mind that the imports for 1890 and 1891 are often divided, a part entering under the tariff act of 1883 and a part under the law of 1890. In such cases the two entries must be brought into one in order to show the total imports in the divided year.

a For 1880, includes Croatia and Slavonia. *b* The number of sheep in the German Empire on December 1, 1892, according to preliminary figures published on page 18 of the Statistisches Jahebuch für das Deutsche Reich for 1893, was 13,775,063. Dr. von Juraschek, in Nebersichten der Weltwirthschaft for 1885–89 (see footnote 6, p. 469), estimates the average wool yield at 1⅓ kilograms per head of sheep, which, however, seems very low. *c* Latest official estimate. *d* Including goats. *e* For 1882.

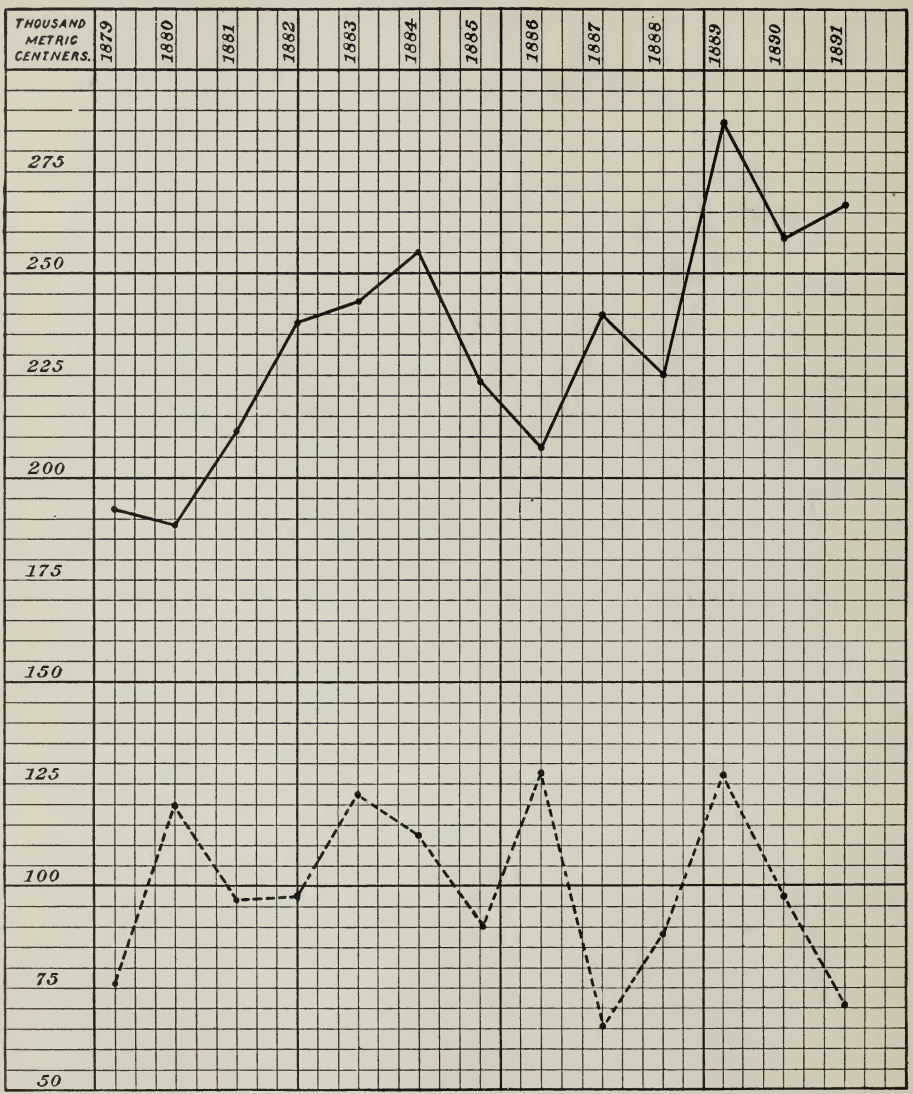
EUROPE.

AUSTRIA-HUNGARY. IMPORTS AND EXPORTS OF RAW WOOL, 1879–1891.



AUSTRIA-HUNGARY.

Although Austria-Hungary are joined in commercial transactions, yet from the standpoint of wool the two divisions must have separate interests. Hungary is a wool-exporting country; Austria, on the other hand, imports very largely, so much as to more than balance the Hungarian exports. The number of sheep and lambs in the two countries point to this. In 1880 Austria contained 3,841,340 sheep and lambs as against 9,838,133 in Hungary. This is the only year for which I can find coincident returns. In 1884 the Hungarian census returns 10,594,831 sheep and lambs, but this return did not include the number of animals in Croatia and Slavonia. It is estimated that these two provinces contain about 589,000 sheep and lambs. In 1891 Austria contained 3,186,787 sheep and lambs. Apparently, therefore, the number of sheep in Hungary was increasing and the number in Austria decreasing. In reality Hungary also showed a falling off, as in 1870 the official census returned 15,076,997 head of sheep and lambs. This intensive feature of the Austro-Hungarian wool interests, leading to a decline in the exports and an increased import, is further shown by its commercial relations to the United States. In 1872 1,333,338 pounds of wool were exported to the United States; but in recent years it has ceased to be a factor in the American supply, and figures only as a comparatively unimportant contributor of manufactures of wool.

As a consumer of wools it is of interest to determine whence Austria-Hungary obtains its supplies. From its geographical position it is natural to find the greatest share of its supply is obtained from Germany; and the price at which it is enabled to obtain wool in that country places other countries at a disadvantage. The carriage of wool, constituting quite an important item in the ultimate cost, is clearly indicated in the statement of wool imports into Austria-Hungary in 1892, which shows the country of shipment and the custom-house or official valuation of each kind of wool by countries. It will be seen how greatly favored Germany is, and also how large a proportion of the annual supplies are drawn from European centers.

Imports of Wool into Austria-Hungary, 1892.

In Austria-Hungary the tariff law in force in 1837 imposed a duty of 30 kreutzers the gross centner, equal to about 25 cents the 123⅓ pounds, or one-fifth of a cent a pound. The tariff law of June 27, 1878, made free, wool, raw, washed carded, colored, bleached, milled, and waste, and it has remained free to the present day.

BELGIUM.

The situation of Belgium in the wool trade (as a producer this country need hardly be considered, possessing in 1880 only 365,400 sheep and lambs) is peculiar. The imports of raw wools are very large, but they are largely intended for other markets of consumption. Thus, in 1891 the imports of wool in the general commerce of Belgium were 145,776,277 kilograms; in the special commerce only 42,162,612 kilograms. The quantity exported in the same year was 106,374,669 kilograms, of which only 2,761,004 kilograms were of Belgian origin, and the other part, 103,613,665 kilograms, was of foreign origin, in transit for European centers of consumption other than Belgian.

As a distributor of wool the position of Belgium has not materially changed since 1885. In that year the total imports were 139,911,382 kilograms, and in 1891 145,776,277 kilograms, an increase of about 4 per cent. The total exports in 1885 were 99,223,007 kilograms, and in 1891 106,374,669 kilograms, an increase of 7·2 per cent. The quantity of Belgian wool exported fell from 3,115,699 kilograms in 1885 to 2,761,004 kilograms in 1891, a decrease of 11 per cent. The sources of

supply of imports and the countries of destination of exports in the two years are shown in the following table:

COUNTRY OF ORIGIN OR DESTINATION.	IMPORTS (GENERAL).		EXPORTS.

Value (francs)	244,844,918	255,108,485	181,113,140	195,128,934

Of the quantities exported in 1885 the larger share was derived from the Argentine Republic, 42,343,200 kilograms. This was an exceptional contribution from the Argentine, and has not been even approached in any subsequent year. In 1888 26,417,225 kilograms were of Argentine origin, and that quantity is nearer the normal. Of late years there has been a decrease; 27,755,092 kilograms in 1889; 19,208,282 kilograms in 1890; and 21,503,437 kilograms in 1891. The countries that have most benefited by the falling off of the imports from Argentine are Australia and France. In 1885 Australia contributed 17,961,455 kilograms; in 1889 only 9,265,922 kilograms. In 1890 the share of Australia rose to 20,854,138 kilograms, and in 1891 to 24,130,641 kilograms. To take the share contributed by France in 1885, 2,642,988 kilograms, would give a wrong impression of the importance of that country in this transit trade in wool of Belgium. In 1888 France gave 21,423,872 kilograms; in 1890, 19,477,864 kilograms; and in 1891, 19,388,560 kilograms. The decrease

that has occurred in the wools credited to the United Kingdom is doubtless due to an increased direct importation from Australia and other British colonies. In 1885 the contribution of England was small as compared with subsequent years, 17,641,853 kilograms. In 1888, 30,061,873 kilograms; in 1889, 28,258,265 kilograms; and in 1890, 26,235,601 kilograms were obtained from the United Kingdom. In 1891 these imports fell to 19,674,385 kilograms. I can only repeat, it is from the commercial side that Belgium presents any point of interest in the wool industry, constituting, as it were, the center of distribution for feeding the needs of other continental countries.

One point may be mentioned in connection with these returns, the general stability of the price or valuation of imported and exported wools in the Belgian returns.

YEARS.	IMPORTS.	EXPORTS.

DENMARK.

Prior to 1888 Denmark exported more raw wool than it imported, and in that year the movement was almost balanced: 2,794,647 punds (pund=1·1025 pounds) of imports, and 2,775,325 punds of exports. Since that year the imports have increased, till they attained the amount of 3,770,205 punds in 1891, as compared with an export of 2,633,254 punds. The quantity of manufactures of wool imported remained about the same in the two years: 6,141,384 punds in 1888 and 6,255,527 punds in 1891. The number of sheep and lambs has not been returned since 1888; but the returns of that and previous years point to a steady decline: 1,842,481 in 1871; 1,719,249 in 1876; 1,548,613 in 1881; and 1,225,196 in 1888. If the years subsequent to 1888 give a like percentage of loss as the years previous, the number will have fallen below 1,000,000 at the present time. As a factor in the supply of wool Denmark has no influence; and as a consumer, its demand is so small as to be inappreciable in comparison with the takings of other countries.

The tariff law in force in 1844 imposed on wools of every description an import duty of 1 rix dollar and 4 skellings (96 skellings=1 rix dollar banco) the hundred pounds, equivalent to one-third of a cent a pound. Denmark charges no duty on imported wool of any kind or on hair, raw or prepared but not worked.

QUANTITIES OF WOOL AND MANUFACTURES OF WOOL IMPORTED INTO, AND OF WOOL EXPORTED FROM, DENMARK, 1874 TO 1891.

FRANCE.

Wools in the French market have reflected the general situation just described in the English and American markets. The permanent commission on tariff values in 1892 say:

In 1891 we established a fall in price of about 13 per cent on the average price of 1890, already so low, and it seemed as if the price could not fall lower, and yet if we compare the mean prices for the two years, 1891 and 1892, we find that Australian wool has fallen by 1[illegible]·5 per cent, the wools of the River Plate, Montevideo, by 7·5 per cent. The French wools by 12 to 15 per cent, according to the quality.—(C'est un véritable effondrement des cours. The bottom has dropped out of the market.)

In connection with prices on the French market may be noted one fact, or statement, made by this commission, the application of which is not confined to conditions in France. Commenting upon the fact that wools from Buenos Ayres ruled in the markets at about the same price a few years ago as Australian wools, it says:

Taking as a type a first quality of French wool, the price of which combed was 5 francs, the combed wool of Australia was 4 francs 75 centimes and a prime quality of Buenos Ayres was 4·50 francs. To-day these proportions are reversed. The prime quality of Buenos Ayres has attained a value of a similar grade of Australian and the price of the first quality of French wool has often fallen below the price of the other two kinds of wool. The reasons for this are various. It may be said in a general way that the wool of the River Plate has greatly improved within a few years. The sheep raisers of these countries have purchased at good prices breeders of the Merino sheep to improve their flocks, and these selections have become evi-

dent in the production and improvement of the wool. In France, on the other hand, as almost everywhere through Europe, wool has been neglected and the efforts of raisers have been devoted to the production of meat and increase in weight.

The types of wool to be compared are no longer the same. The grade of the River Plate wool has become superior and the wool of France inferior to what they were formerly. As to the leveling of the prices of River Plate and Australian wools, this is attributed generally to the fact that the River Plate wools are better adapted to the manufacture of such woolens as have been in favor during the last few years.

There should also be added the influence already mentioned of a very largely increased production in Australian wools, which depressed prices of those wools in the world's markets, and must, therefore, have exerted a depressing effect on prices of those wools. The general course of prices of River Plate and Australian wools (combed) in the French market may be seen from the following table:

	River Plate (tram 78 mm.)		Australian (tram 86 mm.)

DOMESTIC CLIP OF WOOL IN FRANCE.

The latest available returns of the sheep industry in France are those for 1891, which may be taken as a general gauge of the production of wool in 1892.

	Animals.	Average weight of a fleece.	Wool in the grease.
	Number.	*Kilos.*	*Kilos.*
Sheep—rams, ewes	13,198,000	2.650	34,974,700
Lambs over 6 months	6,216,000	0.750	4,662,000
Lambs under 6 months	2,380,000	.....	.....
Total	21,794,000	.....	39,636,700
Wools obtained from dressed skins	.....	.....	9,169,000
Total of clip 1891	.....	.....	48,805,700
Return of 1890	.....	.....	48,621,300

While we have seen that Great Britain uses, in her woolen industry, less than one-half of the total quantity of wool imported, France, on the other hand, consumed nearly nine-tenths of her imports of wool. In 1892 the quantity of wool imported was 203,862,629 kilograms. The quantity exported was 21,753,217 kilograms, leaving a net import of 182,109,412 kilograms as compared with a net import of 169,291,000 kilograms in 1891 and 150,380,000 kilograms in 1890. To this should be added the wool obtained from imported skins and the shearing of sheep imported alive and the domestic wool clip, making the total supply for French manufactures 248,256,000 kilograms as against 238,932,000 kilograms in 1891 and 220,000,000 kilograms in 1890. On this showing France consumes one-quarter of the entire wool supply, and about one-half of the wool used in European countries, giving her the first rank in the countries manufacturing wool. The increase, quantitatively, in the wool consumed in manufacture was greater in Germany than in France, and French exporters, while setting aside any fear of active competition on the part of England or the United States, shielded principally by their specialties, expressed their fear of serious competition on the side of Germany. While the consumption of France in 1892 was 10,000,000 kilograms greater than in 1891, it was estimated that the increase in Germany was 15,000,000 kilograms. Of the wool used in the French industry in 1892 one-fifth was of native origin, one-third of Australian, and more than two-fifths of the River Plate. The remarkable feature in this showing is the enormous strides in the imports of wool from Australia in the last three years.

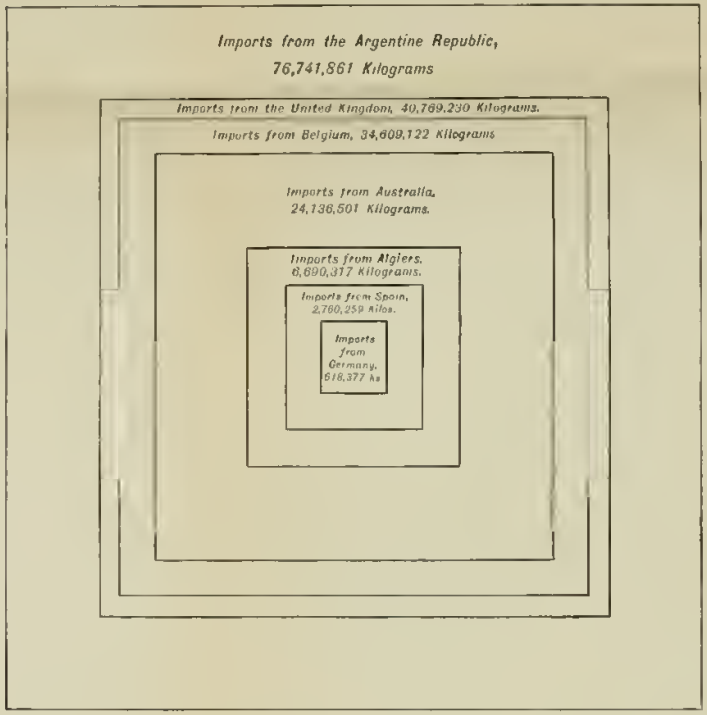
Total Imports of Raw Wool into France, 1892,
202,536,797 Kilograms.



TARIFF.

The tariff law as in force in January, 1842, made a distinction between wools imported by French vessels and such as were imported by foreign vessels or overland. "Wool in masses," when imported in French vessels, paid a duty of 20 per cent ad valorem; when imported by foreign vessels or by land, a duty of 22½ per cent. Combed wool paid a uniform duty of 30 per cent ad valorem, without respect to the manner of entering the country. Dyed wool paid a tax of 3 francs a kilogram when brought in by French vessels, and of 3.175 francs the kilogram when brought in otherwise. The former duty was equivalent to about 57 cents a pound. The duty on refuse wool was nominal—1 franc the 100 kilograms by French vessels and 1 franc 10 centimes by foreign.

The tariff in France that was in force from 1861 to May 8, 1881, was modified in December, 1873, by the imposition of an additional duty of 4 per cent. In that general tariff wool of all kinds, combed or carded, paid a duty of 87 francs 36 centimes the 100 kilograms; under conventional tariffs a duty of 25 francs per 100 kilograms. Dyed wools paid under the general tariff 124 francs 80 centimes and under the conventional 25 francs the 100 kilograms. The general tariff thus imposed a duty of about 8.6 cents a pound on combed or carded wool and about 13 cents a pound on dyed wool. Under the conventional tariff the duty on both classes was a little over 2 cents a pound.

The general tariff promulgated on the 8th of May, 1881, removed all duties from imports of wool, including alpaca, llama, vicuna, yak, camel's hair, Australian, and Cape of Good Hope in bulk or when imported direct from country of growth. Wool, carded, combed, or dyed, was subject to a duty of 25 francs the 100 kilograms net, or about 2.2 cents a pound.

By the general tariff law of 1892 all wools and hairs of the yak, camel, and cashmere were admitted free of duty in the mass. When dyed, combed, or carded (undyed), under the general tariff, they paid a duty of 32½ francs the 100 kilograms, which could be reduced under the conventional tariff to 25 francs the 100 kilograms. Wools, combed or carded, dyed, were subject to an additional duty of 2½ francs the 100 kilograms. The duty under the general tariff is thus about 2 cents a pound.

Quantities and Values of Wool and Manufactures of Wool Imported into and Exported from France, 1861 to 1891.

[One kilogram equals 2·20462 pounds. One franc equals 19.3 cents.

GERMANY.

The time was when German wool was the leading sort in European markets. About 1818 the German wool-growing interest supplanted the Spanish in the English market, and from that year to about 1843 it held first place. Since that time it has in turn been supplanted by Australasia. Even at the present day, however, German wool is imported into England for the finer qualities of goods and for the making of Saxony flannel. The average number of sheep in Germany from 1859 to 1868 was 28,016,769. In 1873 the number had fallen to 24,999,406, and in 1883 to 19,189,715. With such a decrease in the number of domestic sheep and lambs it is not surprising to find Germany's importance as an exporter of wool decreasing, and as an importer of wool increasing. From 1875 to 1891 the quantities of raw wool imported rose from 56,500,000 kilograms to 144,416,000 kilograms, an increase of 155 per cent. In the same period the imports of woolen yarn did not materially increase 16,300,000 kilograms in 1875, and 17,823,600 kilograms in 1891. The imports of cloth showed a remarkable decrease, falling from 7,033,800 kilograms in 1875 to 1,623,500 kilograms in 1891. The export movement showed a decrease in the exports of raw wool from 19,950,000 kilograms in 1875 to 7,780,400 kilograms in 1891; and an increase in the exports of woolen yarn and woolen manufactures. Of woolen yarn there were exported in 1875 3,870,000 kilograms; in 1891, 6,043,100 kilograms, and of other manufactures 12,900,000 kilograms in 1875 and 22,408,400 kilograms in 1891.

The imports in 1892 of sheeps' wool, the price of each kind as valued by the customs officials, and the exports are shown in the following table:

COUNTRY OF IMPORT OR EXPORT.	IMPORTS.		EXPORTS.
	Quantity.	Value per unit of quantity.	Quantity.

Total	159,051,800	1.58	7,623,500

TARIFF.

The tariff of the Germanic Union of Customs, as published in MacGregor's Commercial Statistics in 1844, imposed no duties on sheep's wool, raw and combed. The tariff of July 15, 1879, admitted wool, "raw, dyed, painted," free; combed wool was subjected to a duty of 2 marks the 100 kilograms, a merely nominal duty, equivalent to about one fifth of a cent a pound. It may be of interest to show the wide application given to the free entry of textiles of the wool and hair description: "Alpaca, llama, guanaco, camel, vicuña, Angora, Cashmere, and other goat hair, raw, boiled, hackled, carded, bleached, curled; hare, rabbit, beaver, ape, muskrat, and nutria hair, raw, boiled, hackled, carded, dyed, ground, curled; dog, ox, and other animal hair, raw, etc., with exception of those under No. 11 of the customs tariff;* wool flocks, artificial wool (shoddy, etc.), woolen waste, sheep wool, raw (also washed), carded, bleached, or curled; sheep wool, as well as hair of animals above mentioned of the goat species, dyed or ground."

* Under section No. 11 hair from horses is provided for and admitted free of duty, but human hair, raw, combed, scalded, or dyed, is subject to a duty of 1 mark the kilogram, or about 10 cents a pound.

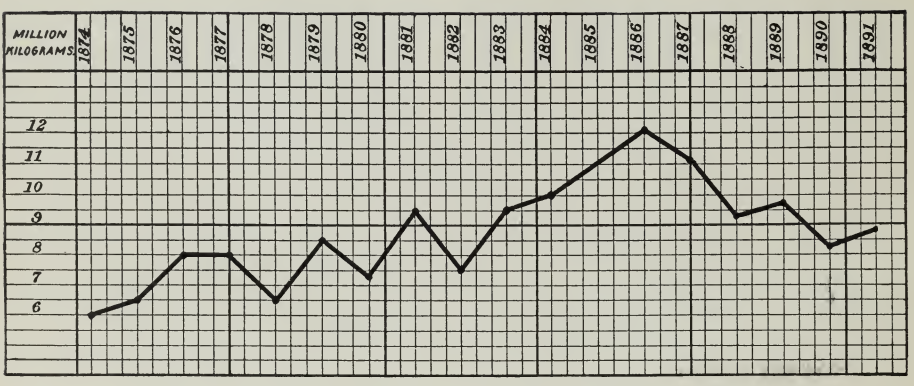
a Not stated.

ITALY. IMPORTS OF RAW WOOL, 1874–1891.



ITALY.

Accepting the estimates of the census returns of 1890 the number of sheep in Italy has not materially decreased since 1875. The number was 6,977,104 in 1875 and 6,900,000 in 1890. The domestic product or clip of wool has never been sufficient to meet the wants of the woolen manufacturers. In 1875 6,500,000 kilograms of raw wool were imported, and in 1891 8,992,000 kilograms—showing but little elasticity in the home demand. As little elasticity is shown in the demand for woolen manufactures or for manufactures of wool mixed with cotton. In 1875 the value of woolen manufactures, pure or mixed, was 45,962,000 lire, and in 1891 43,553,000 lire. In 1892 every pound of wool that Italy imported was for domestic consumption; but of the domestic product there was quite an export, Switzerland taking two-thirds. The principal countries from which wool was imported, in that year, are shown in the following table:

COUNTRIES.	Wool in the grease.	Wool washed.
	Kilograms.	*Kilograms.*
Austria-Hungary	105,200	910,900

Prior to the unification of Italy each principality had a tariff of its own, and the commercial importance of all combined was not sufficient to warrant a detail of the duties of each. The general tariff law of 1878 made wool "natural, washed, carded, dyed, waste or refuse wool," free of duty. A new general law was passed July 14, 1887, and introduced a more complex system of levying duties, as follows:

WOOL, ETC.	Duty.	Per pound.
Wool:		
Natural, unwashed or washed	Free	
Artificial (shoddy)	8 lire per 100 kilograms	$0.008
Dyed	10 lire per 100 kilograms	.01
Carded, undyed	do	.01
Combed, undyed	15 lire per 100 kilograms	.015
Carded, dyed	20 lire per 100 kilograms	.02
Combed, dyed	25 lire per 100 kilograms	.025
Artificial (shoddy, dyed)	8 lire per 100 kilograms	.008
Refuse and waste	Free	
Horse and similar hair:		
Raw	Free	
Dyed	10 lire per 100 kilograms	.01
Curled	17 lire per 100 kilograms	.017
Other animal hair:		
Raw	Free	
Dyed	10 lire per 100 kilograms	.01

NORWAY AND SWEDEN.[a]

The importance of Norway and Sweden in the wool industry is secondary and quite unimportant. A few manufactures of goat hair are exported to the United States each year, and similar returns are occasionally met in the commercial reports of other countries. There is a woolen industry, but it is fed by imports of wools, and the products are chiefly for home consumption. The number of animals at different periods was:

a Returns for 1891 not yet available.

RUSSIA.

Russia in Europe (exclusive of Poland).* The number of sheep and lambs in 1877 was 51,822,238; in 1883, 46,724,736; and in 1888 (the latest year for which returns are available), 44,465,454.† In twelve years the decrease was 14·1 per cent. As will be seen from the trade tables, Russian exports of wool have been about the same since 1873 (and naturally the greater export, if not the entire export, would be over the European frontier to the countries having woolen manufactures). With a diminishing domestic clip, and with little alteration in the imports of wool, raw and in the yarn, the growth of the Russian wool interests must occur in the enormous stretch of Asiatic territory subject to her control, a territory that is as completely outside of statistical record as though it belonged to another planet. Further, the numbering of the domestic sheep must be incomplete, for no census of that kind of property is full even in more densely settled countries where the administration is compact and centralized. That the exports of wool in 1891 were about what they were in 1883, is fair evidence of an

* In 1888 Poland contained 3,754,665 sheep.

† Of this number only about 9,500,000 were of a fine breed.

increased yield to the fleece or an increased source of supply. The one conclusion is opposed by the general information we have of the wool-growing interest in southern Russia, whence the United States draws its supplies; the other is opposed by the returns of the number of sheep in the Russian Empire.

In 1844 it was written, "Russia may be said to prohibit the importation of every material like those which can be drawn, by the labor of her serfs, from her mines and forests; and of every foreign manufactured article, in order that the labor of those serfs, with the aid of machinery either imported or made in the country and directed by skillful foreign artisans, shall be made to produce articles either similar to or that may be substituted for those of foreign manufacture. We readily admit that this prohibitive system, so generally injurious to the Empire, may be very profitable to the nobles at Moscow and elsewhere who are the proprietors of the cheaply and coarsely fed and clad serfs. * * * Cotton twist, still required by her, and sheep's wool, several other articles not enumerated, are admitted at small nominal duties." In 1841 the duty on sheep's wool raw was 1 ruble 90 kopecs the pood, and on wool of camels, goats, etc., 12 kopecks the pood. Sheep's wool scoured paid a duty of 2 rubles the pood, and when combed, but not dyed, 4 rubles the pood. Dyed wool, combed or spun, paid a duty of 4 rubles 30 kopecks the pood. By a law of 1882 the duties were as follows:

WOOL.	Duty.	Cents per pound.
Wool and down:		
Raw, washed and not washed, not dyed; also flock wool and cloth shearings.	1 ruble per pood.....	2
Unspun, of every kind, dyed; also artificial wool (shoddy, mungo), cloth rags, and wool waste dyed.	2 rubles per pood.....	4

A new general law was approved by the imperial ukase of June 11, 1891, imposing duties, as follows:

WOOL.	Duty.
Wool or hair, neither combed or spun:	
(1) Raw or washed, not dyed; combings and waste of wool, not dyed.....	2 rubles the pood.
(2) Dyes; artificial wool (shoddy, mungo, etc.) and wool shearings, cuttings of cloth of all kinds, and wool waste, dyed.	3 rubles the pood.
(3) Combed, not dyed.....	5.50 rubles the pood.
Dyed.....	7 rubles the pood.

The well-known Russian carpet wool is a product of the southeastern governments, and not to be found equal in length and strength in any other part of the world. The most valuable are the "Savolga" fleeces, of 4 to 6 inches in length, and as the climate is a very trying one in these provinces, the wool becomes soft and downy. The next best quality are the "Donskoi" fleeces, to be found in the steppes on both sides of the River Don. The production of the Savolga fleeces has dimished considerably during the last decade, as the original breeders of this kind of sheep,

the Khirgese, are becoming poorer from year to year. The pastures of these nomads extended as far as the Volga, and the rich, flat country bordering the river had placed them in the position of keeping large herds of steppe sheep. Gradually the pastures of the Khirgese were cultivated by the Government, who also took possession of them, and therefore they were driven back into the uncultivated steppes, where, in consequence of the bad climate and the scarcity of food, their live stock diminished considerably. Peasants settled on this land, formerly used for pastures, and began to breed the steppe sheep. These peasants, and those in the Don districts, are the only ones that breed this kind of sheep, which do not require shelter or much care. Wealthier peasants occupy their time with breeding the Merino sheep, which pays them better.

The difference in price is as follows: The Savolga or Donskoi fleeces realize from 10 to 12 rubles against 28 to 32 rubles per pound for the merino fleeces. The trade with carpet wools is consequently a most difficult one. While merino wool is brought into the market in large quantities, carpet wool is brought by the farmers in small quantities and sold again to the wool cleaners, who, after having washed and assorted the same, bring it to market. The wool is very often mixed with burs, which grow in abundance in several of the districts mentioned and are difficult to remove. The most important wool-washers have their offices in Moscow, as the best carpet wool is brought here for home consumption as well as for export purposes. This city (Moscow) is the center for all dealers and manufacturers in Russia. The wool that comes on the market in the interior, say Charkow, Rostow on the Don, is very often very unreliable, and great care and observation are necessary when purchasing; whereas the wool sold in Moscow can better be relied upon. This also applies to the "camel hair," "autumn," and "lamb's wools," which are likewise used for the manufacture of carpets. This is the cheapest and best material used at a reasonable price for this purpose. The trade in these articles is confined almost exclusively to Armenians and Tartars, who realize from their sale, partly at Nijni fair and partly at Moscow. The price of this kind of wool differs according to quality and purity." *

From a report made to the Department by George Scott, U. S. consul at Odessa, under date May 28, 1885, I extract the following:

There are several denominations of wool, namely, Cherromari, coarse long wool; Belovadsk, coarse, very long wool; Don wool of the Cossack territory, short or second clip; Line, short wool of the Caucasus, soft texture staple; Manitch, or Don wool, from the villages along the river Manitch, of good length, although clipped in the autumn; and Brook-washed wool, autumn shorn, also in grease. All of the above are sold or shipped under the denomination of Donskoi wool. * * *

The total quantity of Donskoi wools in grease bought annually in this consular district amounts to about 400,000 poods (2,400,000 pounds), exclusive of brook-washed and greasy autumns. * * * After going through the process of washing the wool is shipped mostly to the United States and a small portion to France and England. The loss in washing depends on the condition of the wools in the grease and the cleanliness required; it is about 40 to 45 per cent.

Russian washed wools are also brought to the ports for sale under the denomination Donskoi. Those wools are, the greatest portion, in foot bales, and some in press boles, washed in the interior at Barosiliptz, on the River Coper; at Saritsine, on the Volga; in the Caucasus, near Stasoropol, and in villages on the river Manitch; also near Cherson. In 1884 something over 5,000 bales were sold to exporters and rebaled.

Merino fine wools, grown on the line of the Caucasus, near and along the river Kuban and in the district of the Don Cossack territory, form a great portion of the commerce in Rostow on the Don. There are many large sheep farms kept by set-

* U. S. Consul Van Riper, Consular Report 41, May, 1884.

tlers from the Tauride, who took their sheep there during the Crimean war. The high prices paid during some years have enticed many peasants and small farmers to rear this class of sheep, finding it more advantageous than rearing common sheep. Of the quantity fine merino wool in the grease brought to the ports of this district annually one-half is generally contracted for at fixed prices during the winter. A large portion is exported in the grease to France, England, Belgium, and Prussia. The remainder is sent to the interior towns to be scoured for the Moscow market and manufactories. * * *

The weight of fleece of merino wool is, from ewes, 6 to 7 pounds; from rams, 8 to 9 pounds, Russian; but all depends on the winter, the pastures, the locality, and the spring weather.

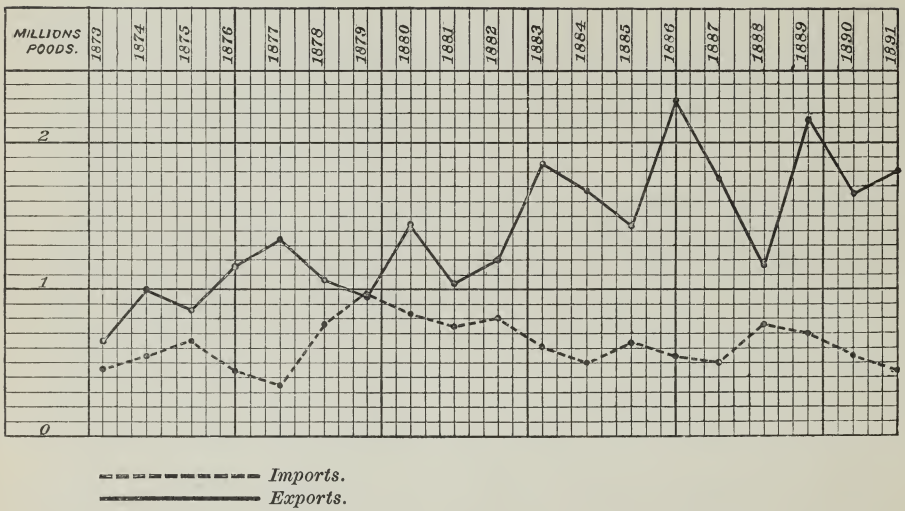
From a report made by Thomas E. Heenan, U. S. consul at Odessa, in March, 1890, I gather that the quantity of Donskoi, or coarse wool, brought in the grease to the washeries in Rostow on the Don, in 1889, amounted to nearly 10,000,000 pounds, of which 9,000,000 pounds were sent to the United States. This wool when washed was reduced in weight about one-half. The quantity of merino wool brought to the same place amounted to 40,000,000 pounds in that year. The consul reports:

The quantity of merino wool increases every year in Russia, as woolgrowers find it a good investment, prices during the past four years ruling very high. England takes more than half the total quantity of merino wool offered for sale in Russia, and the United States nearly all of the coarse wool. Merino wools are never shipped from Russia to the United States.

The same consul, in a report made three months later, attempted to give the cost of sheep-raising in South Russia, but omitted to state whether it was the coarse or the merino wools that the farmer was raising. According to his statement the average size of the flock was about 1,200 sheep and the number of attendants for such a flock was 4, 3 men and a boy. The wages of a man was $50 a year, and of the boy $20, with food, shelter, and a part of their clothes. The average cost of sheep per year to the breeders was placed at 2 rubles, and its equivalent in American currency was $1.09, though I can not determine what rate he takes for the ruble, as the silver value would by no means correspond to this equivalent. The average weight of a fleece was 9 pounds and the average price per pound was from 10 to 12½ cents. From 5 to 10 per cent of sheep are lost annually through disease, age, and neglect. The proportion of lambs is about 20 per cent. Sheep imported from other countries change their fleece, the wool grows coarser and loses its grease. The conditions as described probably apply to the carpet wool, or Donskoi grade.

The usual quantity of merino wool found its way to this market during the past season, viz, about 17,460 tons; of these about 15,080 tons were bought up by Russian and Polish manufacturers, only about 1,746 tons being exported to England, while 635 tons still remain here in the hands of speculators. It may be observed that the exports of merino wool are yearly decreasing, owing to the inability of exporters to offer the prices the Russian buying are in a position to pay consequent upon the ever-increasing demand for home consumption. The prices paid were from 4¼*d.* to 5¼*d.* per pound, some of the higher qualities fetching 5⅞*d.* per pound towards the end of the season.

RUSSIA (EUROPEAN FRONTIER). IMPORTS AND EXPORTS OF RAW WOOL, 1873–1891.



The amount of Donskoi greasy wool brought to this market during the past year was about 3,650 tons, as against 4,127 tons in 1891. The deficiency is accounted for by the fact that purchases were made in the interior to supply the demand for the northern provinces brought about by a severe loss of sheep in those parts during the winter. Of the above quantity about 160 tons were taken for home consumption, the remainder being bought by export houses. Shipments in the grease amounted to about 715 tons, exclusively to America; the remaining quantity being washed yielded about 1,905 tons, which were likewise exported, principally to the United States, excepting about 238 tons shipped partly to France and Italy and a trifling quantity to Germany. The prices ruling during the season were from 3½*d.* to 3¾*d.* per pound, without any sudden or marked changes taking place.

The quality of the wool was somewhat below the average, the sheep having suffered for want of sufficient food during the winter, owing to the unsatisfactory hay crop of the preceding year.

The quantity of brook-washed autumn and lambs' wool offered for sale was about 795 tons, of which about 700 tons were secured for export to the United States, viz, about 600 tons autumns and 100 tons lambs, the remainder being sold to Russian manufacturers. A few thousand pounds of the better quality lambs' wool were forwarded to Moscow for sale instead of to this market, owing to the higher prices obtainable there. The prices paid here were from 5½*d.* to 6*d.* per pound.

About 160 tons autumns left over from the previous year were shipped to the United States in the spring.*

Odessa: export, 1891, 3,057 tons, 200,700 pounds; 1892, 1,944 tons, 118,252 pounds.

SPAIN.

In 1795 the total exports from Spain were valued at 480,000,000 reals vellon ($25,000,000), to which wool contributed 150,000,000 reals vellon. The imports of wool into the United Kingdom from Spain for the years 1831–1840 were:*

YEAR.	Pounds.	YEAR.	Pounds.

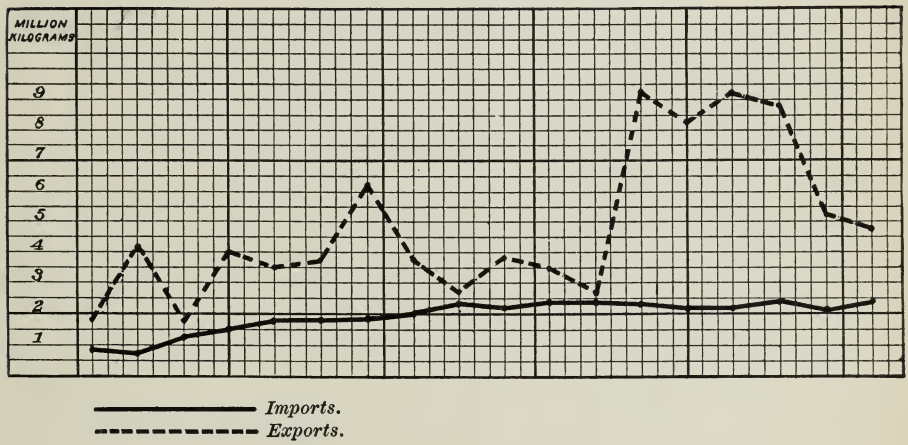
* McGregor's Commercial Statistics, II, 1,034.

SPAIN. IMPORTS AND EXPORTS OF RAW WOOL, 1874–1891.



In 1842 Spain sent to France 3,925,189 kilograms (8,635,416 pounds), and the value constituted more than one-fifth (22.4 per cent) of the value of the entire imports from Spain. Statistics of the export of wools to other countries are wanting, but at this time that commodity must have formed one of the leading staples if not the staple in the Spanish export trade. The tariff of 1841 specifically notices an element of competition for "Saxony wool, called "primas electoralis" was subjected to a duty of 40 reals vellon for every arroba imported, or about 8 cents a pound. In 1859 the exports of wool were returned at 159,917 arrobas* (4,055,493 pounds) showing a marked falling off in quantity. The exports since 1866 are given in the usual table. The destination of the exports of raw wools in the two years 1880 and 1891 are given in the following table. In the earlier years a distinction is made between common wool and fine or merino wool, a distinction not retained in the latter year. As showing the relative importance of the two kinds, I keep separate the earlier returns.

If the returns of exports in 1795 are correct, wool gave more than 31 per cent of the value of all exports. In 1891 the value of raw wool rep-

* Anuario Estadistico de España, 1860, p. 323.

resented only 7,686,000 pesetas out of a total of 932,245,000 pesetas; less than 1 per cent. As already stated, it was in 1818 Spain lost its supremacy in the English wool markets, and this must have been the result of some decay in the Spanish trade, a natural consequence, perhaps, of Napoleon's wars. A decisive blow on the part of England must also have determined the decline of exports in that particular direction. Wool was admitted into England free of duty from 1787 to 1802, when a duty of 5*s.* 3*d.* per cwt. was imposed. In 1813 this duty was raised to 6*s.* 8*d.* per cwt., and in 1819 to 56*s.* per cwt., or about 12 cents a pound. This high rate of duty, 1 cent a pound higher than is collected on unwashed wools of the first class under the United States tariff law of 1890, was intended as a measure of protection, and must have seriously affected the imports of Spanish wool already falling away in the face of German competition.

I am unable to find any estimate of the number of sheep and lambs in Spain.

THE LONDON WOOL MARKET, 1887–1893.

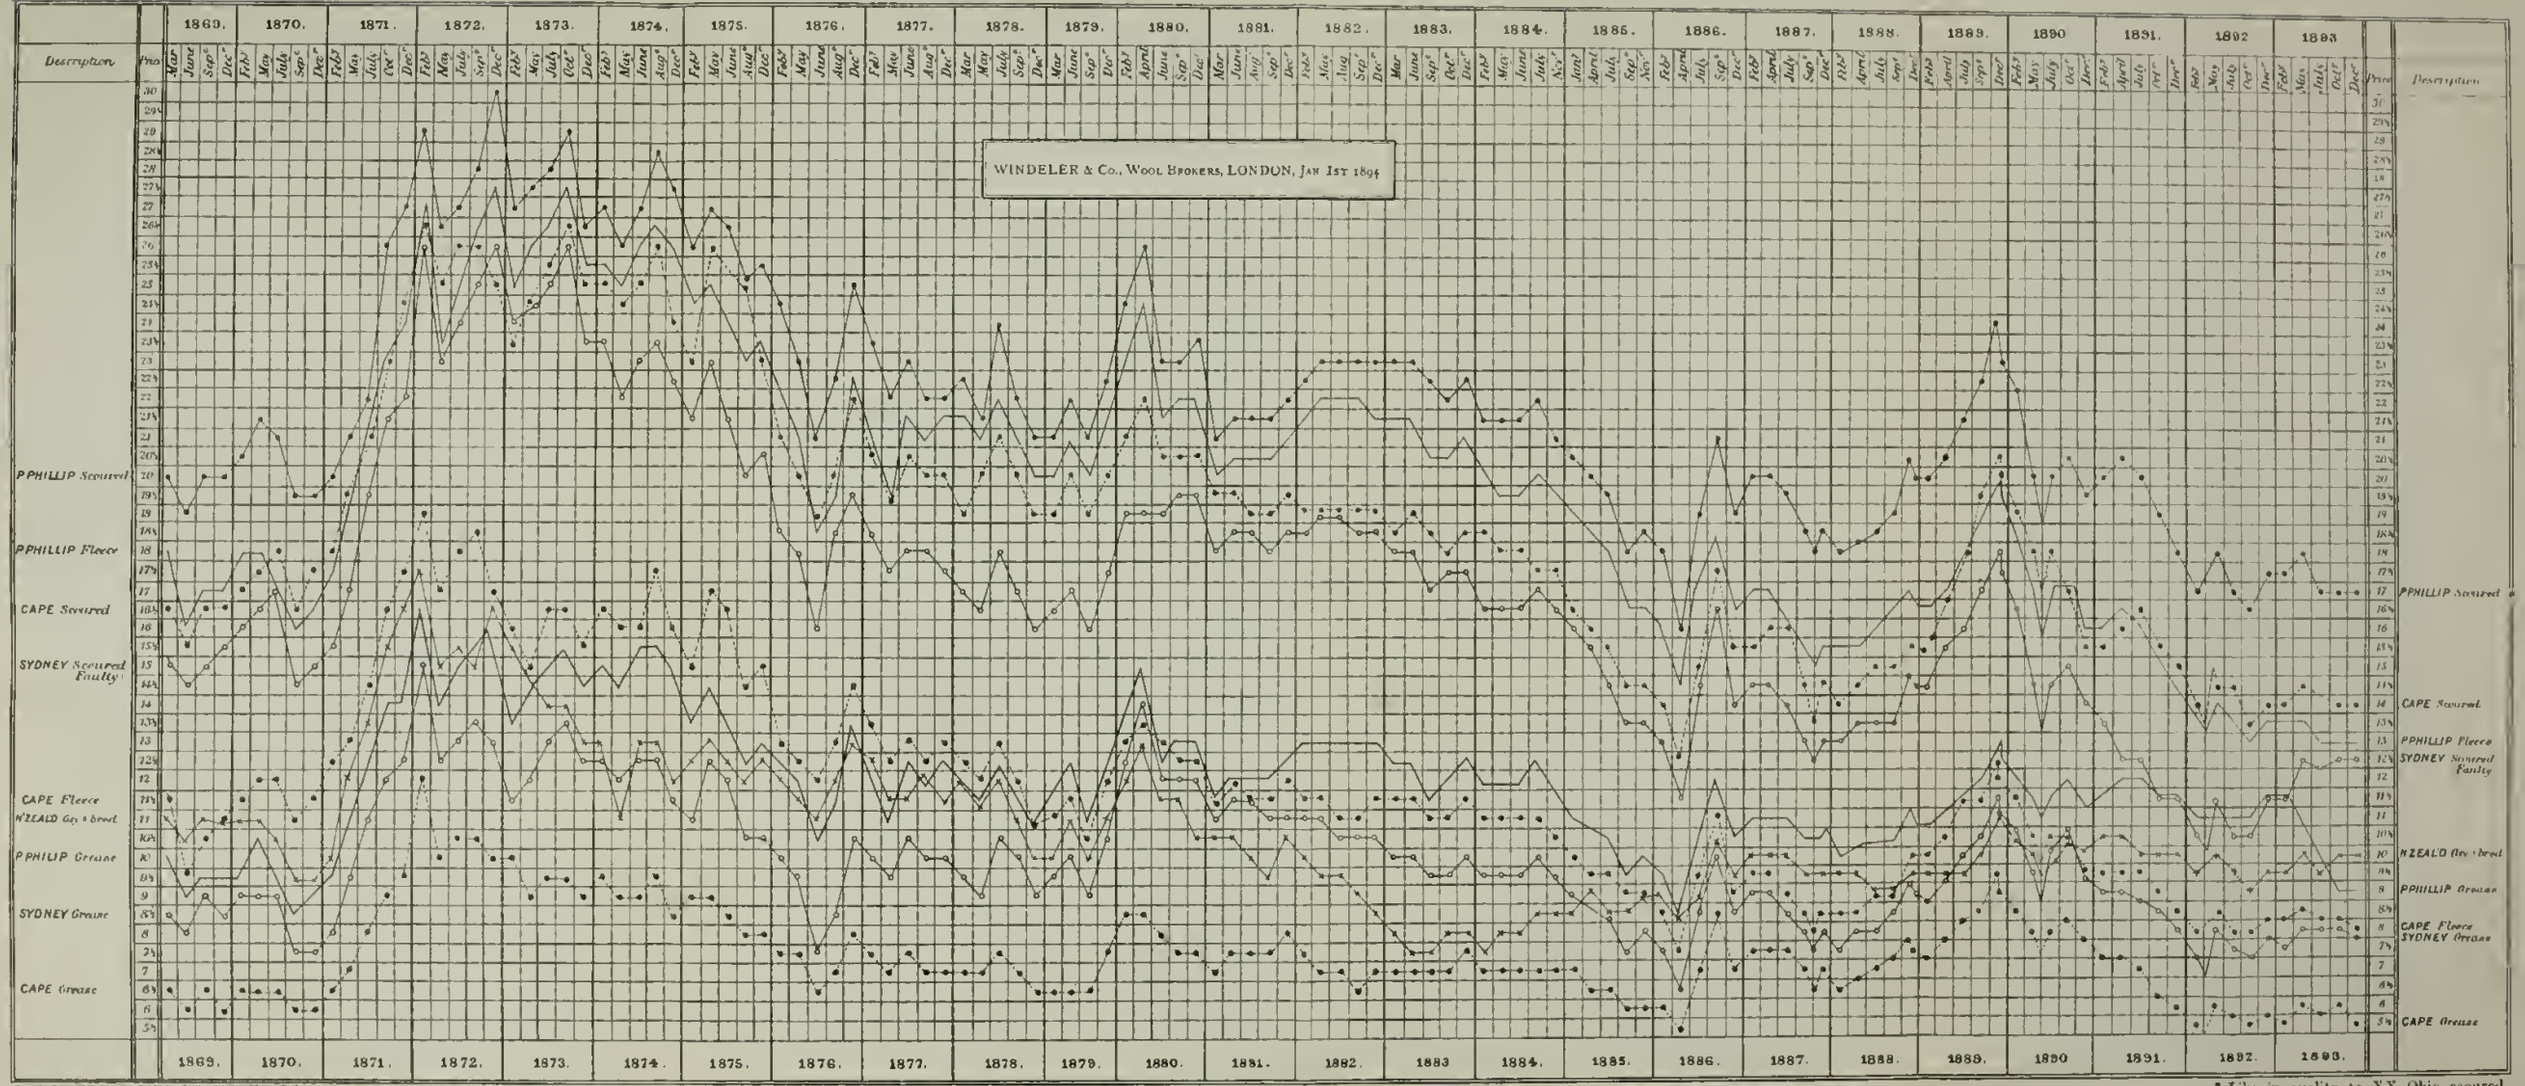
[From the annual circulars of Helmuth Schwartze & Co.]

LONDON, *January 11, 1887.*

The past year has witnessed such sudden, strong and contradictory fluctuations in the prices of wool as to give the course of the market an air of artificiality. Strong upward and downward movements are not foreign to the article, but when they have occurred the cause producing them has lain on the surface. The wave of prosperity that followed the war in 1870, or the excitement in Amercia 1879–'80, adequately explained in the one case the lasting, in the other the temporary rise of wool and of many other commodities. In the present case such an obvious explanation is wanting. It is possible to follow the movements with reasons only for a short way, to argue that the low level of values had stimulated consumption, that the decline had gone too far and rendered a reaction legitimate, that the decrease in the Buenos Ayres clip reported in spring produced a strenthening and the war rumors and unexpectedly large supplies of colonial wool at the end of the year a weakening effect upon the market. But there is nothing in the proportion of supply and demand, which in its entirety was perfectly normal, or in the condition of the industry, which from one end of the year to the other presented the same aspect of full, steady employment, to account for the alternate cold and hot fits to which the market has been subject. So little used was the trade to such transformations that the unexpected and, in its magnitude, unaccountable rise in the spring was in this country for some time regarded as the work of a foreign "ring." This view was not founded on fact, but it contained a germ of truth. There can be no doubt that speculation last year played a more prominent part than is commonly the case, not on the strength of the policy of a few individuals, but from a combination of circumstances which rendered an article, not as a rule lending itself easily to speculative handling, sensitive to even small influences.

Between the day's requirements of the consumption and the visible supplies in the market lie the more immediate supplies represented by the stocks in the hands of the trade; stocks partly absolutely necessary, but partly speculative and elastic, large or small according to the amount of confidence entertained at the time by the owner. Even in individual cases the difference between the "large" and the "small" can be considerable; but where a whole trade is concerned, where it is swayed simultaneously in the same direction and from one extreme to the other, it may represent a rising or sinking of the demand of vast proportions. This is what happened last year. Owing to the continued downward course of the market, the trade in all its branches had come to learn that stocks meant losses, and had consequently reduced them to a minimum. The ordinary and healthy disposition, moreover, to resist

TABLE SHEWING FLUCTUATIONS IN THE VALUE OF COLONIAL WOOLS DURING THE PAST 25 YEARS.



THE NORRIS PETERS CO. PHOTO-LITHO. WASHINGTON, D. C.

* Like in quality to XX Ohio scoured

a rise and to see a source of profit in cheapness, had after the interminable falls become completely reversed; it was not cheaper wool that the trade wanted but dearer wool. When, therefore, on the report of a decrease in the River Plate production some houses in France began to buy resolutely, this practical manifestation of confidence proved contagious. The movement was not resisted, but on the contrary hailed with universal satisfaction. Every one helped it on, speculation revived on a large scale, and the general replenishing of stocks which ensued produced apart from the actual consumption a wave of demand which carried all before it. The advance reached lengths which rendered a reaction natural. Yet the extent of the latter, making all due allowance for the unexpectedly heavier supplies of the last series and the influence of the political apprehension, is in the face of an excellent business intelligible only on the ground of a sense ot bewilderment. All speculation collapsed, and though the bulk of the wools offered in December was sold, it passed into fewer hands, and the conspicuous abstention of many French buyers, by limiting the number of competitors, depressed the market beyond what seemed requisite.

Though much of what was gained in summer has been lost again, the year must have enriched the trade generally. On a superficial view its results seem to teach that thorough-going confidence on the part of a few may achieve much, and movements to reproduce these experiences are being witnessed at this moment. But it is unlikely that last year's peculiar circumstances will recur, and if an improvement is carried it will probably be less by means of speculative action than on the more solid grounds of large consumption and moderate supplies.

LONDON, *January 11, 1888.*

A REVIEW OF THE YEAR.—In strong contrast to the violent fluctuations which had marked the preceding twelve months, the even course of 1887 appears singularly uneventful. The year began under distinctly favorable auspices, and the thought that it might possibly have in store a repetition of the experiences of 1886 was probably present to not a few minds. The position of the article appeared so sound, the raw material had receded to so low a level, and the forthcoming supplies promised to be so well within the bounds of industrial requirements, that a renewed manifestation of elasticity would have had nothing unnatural in it. Any illusion on the point had, however, to be abandoned, for though a rise in the first series seemed temporarily to support sanguine views, the smallness of the improvement and its undecided transient character showed its inherent weakness too clearly to allow of any further expectations being based upon it. Still, and despite the adverse influence of ever-recurrent war apprehensions, a generally favorable opinion managed to maintain itself during the first three or

four months, and this part of the year must have yielded generally favorable results to the trade. After that confidence waned so distinctly that whereas at the beginning of the year no solid ground had appeared why prices should not return to the high rates of the year before, the question which the trade asked itself in autumn was, What should prevent the market from falling to the lowest point of 1886? The moderate supplies of the raw material forbade an approach to that exceptional level, but yarns and goods came near it, rendering the position of manufacturers for a time very difficult. The last month of 1887 witnessed—partly in consequence of a rise in other articles of consumption—a return of confidence, greater activity in the trade and a moderate improvement in the prices of wool and woolen goods, which brought the former back to the opening level of the year, but left the latter still distinctly behind it.

We thus have a twelvemonth of mostly indifferent and halting business, but with a good tone at both ends; the opening tone good as an after effect of the experiences of the previous year, the closing good because of the contagious influence of a rise of articles quite unconnected with wool; at both ends also the same prices of the raw material, with a moderate depression—say of 5 to 10 per cent—in the middle, and a range of values low throughout. Considering the favorable conditions in which the trade was placed, and the evident signs of strength the article had revealed in the preceding year, the result seems disappointing; the more as the grounds on which better expectations had been built have proved sound in the main. As had been assumed, the stocks have shown themselves low, the rate of consumption large, the supply stationary. Whence, then, the indifferent result? The answer must, we believe, be partly sought in the injurious influence of politics. Again and again have war rumors destroyed the reviving confidence, stifled all healthy speculation, and prevented the trade from stocking itself to a legitimate extent. But it must also probably be admitted that, as we pointed out in our last annual circular, a permanent return of the value of wool to former levels can not yet be expected, and that however low present prices may appear as compared with ten or fifteen years ago, they are but in harmony with the reduced value of most large articles of consumption.

LONDON, *January 10, 1889.*

The past year has been fairly satisfactory to both growers and manufacturers. Its main feature is the absorption of a rather large increase in the supplies without difficulty, without accumulation of stocks and with no more than a very moderate, one may say legitimate, pressure upon prices. Throughout the year machinery has been well employed. A partial reduction of working hours was indeed reported from France, where the condition of the industry has given ground for complaint for

some time past. But taken as a whole the rate of consumption has been very large; the trade has been much less disturbed by political apprehensions than in 1887 and has for the most part, we believe, worked at fairly remunerative rates.

The increase in the colonies amounted to 10 per cent, and though the clip in the River Plate States differed but little from that of 1887, the supplies that actually reached the hands of the trade were also about 10 per cent larger. This is a considerable surplus in one year. Yet it is easy to exaggerate its importance. A large expansion of the production is no longer the standing feature which it was in former years when the forward strides made annually were indeed incomparably greater and their lowering effect upon the value of wool unmistakable. In recent times there has been no appreciable lowering of prices from this cause. The production still goes ahead, of course, but the increase is much smaller, less general, and more intermittent than formerly, a rapid growth in one season and one country being partly neutralized by a stationary or even receding supply in another season and another country. Hence the comparatively small pressure exercised upon values. The rate of consumption is fully abreast of the supplies, and an occasional strong increase is, as in the past year, cleared with ease.

The low state of stocks in the hands of the trade is a feature which has been observed for some time, but which during the past year or two has come into view with increasing clearness. It is a fruit partly of a long period of declining prices which taught the trade to avoid stocks as an almost invariable source of losses, partly the result of the accelerated means of transport and the quicker transmission of intelligence, which render large provisions practically unnecessary. The amount of the latter still varies, of course, in accordance with the more or less sanguine views held at the time, but, given the same degree of confidence, there is little doubt but that the industry is now stocked less than in former years. This is a new factor, which has to be borne in mind in every estimate of the market and its chances. In some measure it will cause prices to follow the changing conditions of supply and demand more closely and immediately; but it may also in times of revival produce precipitate action and undue excitement, as was the case in the summer of 1886.

The present range of prices is often called low, and appears so on a comparison with former years; but the comparison is misleading. If the fall of wool to an altogether different level had been brought about by causes peculiar to itself, it might be treated as a fluctuation. But there has been no overproduction—if not only the supplies from beyond the seas, but the equally important European clips be considered—and there certainly has been no limitation in the range of purposes to which wool is applied. The causes which have lowered the value of wool are the same which have reduced the price of most large articles of con-

sumption, and, whatever they be, their nature is not that of a passing influence, but bears a permanent character which nothing short of a complete revolution in the whole scale of values could change. It is a mistake, consequently, to use a standard of comparison which no longer exists. We think that in estimating the present position of prices we should go no further back than the year 1885, when the lowering influences of which we have spoken may be said to have expended their force. Considerable fluctuations have taken place since 1885, so considerable as to probably mark the extreme of any likely changes both in an upward and in a downward direction. The present prices are equidistant from both the very low and the very high rates of 1886, and, judged thus, stand at a fair average point.

LONDON, *January 9, 1890.*

A review of the past year leaves an impression of great prosperity in all branches of the wool trade. Rarely has there been a period marked by such an entire absence of complaints, or in which the satisfactory and profitable nature of the business has been so freely and generally acknowledged. While to the grower the range of prices has been such as to recall old times, the dealer has been favored by the continuous upward tendency of the market which in its turn again has in its advancing steps been generally so steady, circumspect, and moderate as to never impede the industry. Of the returning prosperity, visible in many commercial pursuits, the wool trade and all concerned in it have in fact had a full share.

It is satisfactory to record that there is not the usual reverse of the medal to this favorable account, but that the condition of the industry is no less fundamentally sound than its activity is profitable. The year has not been wanting in tests on this point, the chief one being the increased supply from the colonies and the River Plate States. It will be remembered that at both these sources the production in 1888 had shown a considerable surplus, no less in fact than 192,000 bales. 1889 brought a fresh increase of 138,000 bales, making 330,000 bales, or nearly 20 per cent, in the course of two years. With a less robust market the effect of this rapid growth would scarcely have failed to have shown itself, but as a matter of fact no feeling of pressure was experienced at any time of the year, and instead of weakness we have had, concurrent with increasing supplies, ascending prices. The truth is, the industry has lately grown quite as fast as the production, manufacturers working to the full measure of their capacity and continually adding to their plant. The creation of new and the enlargement of old establishments on the Continent has been a conspicuous feature of the year. It is still going on, and the full effects of the demand it creates have still to be felt.

Another point in favor of the soundness of business is the very mod-

erate part played by speculation. Throughout the year the situation never looked other than promising, yet, with everything to stimulate them, speculators could never bring themselves to take any prominent share in the purchases, and the prices may be said to have always been determined in the most legitimate way by the bona fide consumer.

In the November sales a wrong estimate of the requirements of the industry led to a temporary exaggerated rise which as soon as its unjustifiable nature was perceived was lost again. But the relapse which under more precarious circumstances would certainly have disconcerted the market for some time had no lasting effect. Confidence was nowhere seriously shaken, and the situation was considered as healthy as before. In whatever way, in fact, the soundness of matters has been tried the test has always returned the true ring.

The value of wool has gradually risen; it stands now nearly on a level with September, 1886—a period looked upon as exceptionally high in these later years—and it bears comparison with former times. No special reason can be assigned for this recovery from among the circumstances surrounding the article. Neither has there been any new departure in the demand nor a falling off in the supplies. The improvement seems rather the outcome of an amelioration of trade in general. After long years of depression there is a reaction for the better. The times are more peaceful, there is more confidence, and while the necessaries of life remain cheap the consuming power of the masses has risen. Add to this the effects felt and still to come of last year's good harvests in this country, and the elements for a prosperous trade are given. What is noticeable in wool is that, without, as we have shown, any special reasons of its own, it has benefited by the general improvement more than other great articles of consumption. Its value, relatively, is high. This is worth bearing in mind, the sound position of the article notwithstanding.

LONDON, *January 8, 1891.*

The past year has completely belied the favorable anticipations under which it opened, and its history is a record of disappointment and of losses quite exceptional in their magnitude, and presenting a striking contrast to the unbounded prosperity of the preceding twelve months. No particular flaw can be discovered in the reasoning which a year ago led the trade generally to forecast very different results. On the most important point, viz, the heavy decrease in the River Plate clip, the predictions of producers, often so misleading, proved for once absolutely correct. The full estimated deficit—100,000 bales—was realized, and not only was this the case, but the Cape production, too, fell off by 20,000 bales, while the greater part of an increase in Australia was neutralized by the delay which the Australian strikes caused in the autumn shipments. Nor can it be said that the strength which the

market should have derived from these circumstances was in any way counterbalanced by unexpected adverse circumstances from without. The financial crisis appeared too late in the year to affect prices, the vast bulk of supplies having been sold; and though it added to the depression in the small December sales, it can hardly be said to have caused it. The effects of the McKinley bill might seem more serious, but here, too, on a balance of facts, it is doubtful whether much injury was done. For the tariff increased the American demand for raw wool, and if it checked the European export trade in goods, it was the cause also of much anticipatory buying for the United States during the summer months. All remaining general external influences—undisturbed peace, plentiful harvests—should have told in favor of a strong, not a weak, market.

The fact, however, is that the history of 1890, with its downward course of prices and its severe losses in the face of an unparalleled decrease in the supplies and of generally favorable circumstances, is intelligible only if viewed in the light of a reaction; a reaction from an undue expansion of trade in 1889, from the day and night activity of the industry which absorbed the largely increased supplies of that year not only without any lowering of values, but with constantly rising prices and which at the end left all markets absolutely bare of stocks and in apparently the soundest condition. Certainly, the supplies had been well cleared and there were never lighter stocks of wool than at the close of 1889; but at the cost, as events have since shown, of heavy stocks of the the manufactured article, yarns and goods. No factor so completely defies accurate measurement as this question of the stocks of goods, and it is natural that at a period of great prosperity, such as existed at the close of 1889, it should have been entirely hidden from the trade. But facts assert themselves in the long run, and in the light of last year's events it is clear that many more goods were manufactured in 1889, than the actual consumption required, and that with the losses of 1890 the trade has paid the penalty of this overproduction.

The industrial activity of last year has been on a more restricted scale, partly in consequence of the 1889 legacy of stocks of goods, partly of the necessity imposed by the supply. Goods to the extent of 100,000 bales River Plate wool have been manufactured less, and this does not exhaust the case. There are short receipts from Russia and a heavy falling off in the imports of foreign, Mediterranean, etc., low wools. It is not too much to say that the decrease in the quantity worked up by the European industry is equivalent to 300,000 bales colonial wool; and not only has there been this enormous reduction in manufacturing, but the lessened quantity has passed into consumption at lower prices. Unquestionably a more normal state of things has thereby been brought about and though the situation looks nothing like so hopeful as a year ago, the probability is that it is in reality much sounder.

LONDON, *January 9, 1892.*

The past year has been one of great difficulty to the woolen industry, which has had to deal with enormously increased supplies under most unfavorable conditions. A heavy surplus in the colonial and River Plate clips was indeed foreseen from the outset, and few probably entertained very sanguine views as to what the year had in store for them. But it was hoped that the general absence of all stocks both of wools and woolen goods might prove an efficient counterpoise to the increased supplies, and that with a consumption stimulated by a severe winter the market might succeed in maintaining its level. For the first six months of the year this was indeed what happened, and it is not impossible that the trade might have managed to "pull through" had the industry been in a normal and uncramped condition. But such was by no means the case, and when therefore in September the increase appeared upon the market in proportions surpassing the highest estimates, the result was a strong fall and the reduction of the value of wool to a very low level.

Put in round numbers the augmentation in the colonial and River Plate productions amounted to 306,000 and 63,000 bales respectively, or to about 18 per cent, an increase, which, taken in the aggregate, has never been equaled before quantitively, though proportionately it has been surpassed. To meet it the wool trade should have had its activity free and unfettered in every direction instead of being, as was the case, embarrassed at several points by serious difficulties. Of these the most conspicuous and direct in its effect was the American tariff. Its importance may be measured by the fact that the exports of woolen goods from England to the United States fell from £4,800,000 to £3,000,000. We have not as yet the annual statistics from France and Germany; but if, as is probable, their exports show a proportionate reduction, the cramping influence of such a vast dislocation of trade, the difficulty and time required to find fresh outlets, and the losses involved can readily be judged. In some of the most important industrial centers of Germany a third of the looms were last summer reported as standing still, mainly from this cause. And while thus limiting on the one side the field for exports, the American tariff on the other stimulated the American demand for wool, thereby depressing the value of goods and increasing that of the raw material at the same time.

Another circumstance with which the trade has had to contend was the superabundance of machinery which under the influence of the good years 1888–'89 was set up on the continent and mainly in Germany. The trade was familiar with similar conditions in 1873, when it took some years to adjust the anomaly. The difficulty which an overgrown industry creates lies in the excessive and artificial competition it causes between manufacturers, both in the buying of the raw material and the selling of their goods, artificial in the sense that its end is not the

natural one to feed actual demand, but simply to employ machinery. Of course the raw material profits by such a state of things and there can be little doubt that, had it not existed, the prices of wool would have fallen still lower than they did, but the unsatisfactory position in which it places the manufacturer is obvious.

We will finally mention—last but not least—the one cause of depression which on a review of the year must present itself to all observers; we mean the influence of the enormous losses which the large depreciation of securities must have inflicted, in one shape or another, upon a large portion of the community. Not enterprise but retrenchment has been the order of the day, and the wool trade has suffered from it in common with all others.

LONDON, *January 9, 1893.*

In the history of the fluctuations of value the past year establishes a record in two respects; it marks the lowest point to which Australian merino wool has fallen, ever since it played a leading part in the supplies of the world and—what is more significant—it is also the year of the lowest average level of values ever known for colonial wool. Twenty years ago wool was about double the value of what it is at present, but it is not necessary to go back so far for a comparison, which would indeed be misleading as the general circumstances at that time were different. The contrast with quite recent years is sufficiently striking. In 1891 the average value of a bale of colonial wool was 13 per cent higher than last year; in 1890 the difference was 23 per cent, and in 1889 very nearly 30 per cent. The weight of these comparisons lies in the fact that they do not deal with temporary and isolated extremes of price fluctuations, but are broad yearly averages. Australian wool has on several occasions been for a short time nearly as low before—Cape and River Plate wool have even been lower—but there have never been such low yearly averages. And this not only applies to colonial, but to River Plate, to English, to low foreign, in fact to almost every description of wool produced.

In looking for the causes of this depreciation we will pass by the fact that wool does not stand alone on a low level, but that its fate is shared by the majority of large articles of consumption, for many of which the year 1892 also marks the lowest ebb in prices. That is a circumstance of which we will only say that it seems to stamp, not indeed the depression in its extreme, but a generally moderate range of value with a certain character of permanency. Of the more immediate causes of last year's very unfavorable results, several, such as failures and a deficient harvest at home, cholera on the Continent and the tariff legislation and its present uncertainties in America, suggest themselves; but the truest and also plainest explanation lies probably in the fact that the production of wool is still in the ascendant and that it forces the pace of the consumption at the cost of prices. In every transaction the bargain is with the buyer, and the seller in the abundance of supplies never has

a real chance of permanently asserting himself. There is indeed machinery enough and to spare to deal with all supplies, for in the keenness of competition the tendency of the industry has been to expand in order to make up in a large turnover for the smallness of profits. But this is only substituting an abundance of goods for an abundance of wool and does not touch the ultimate demand which it seems can at present be stimulated only by lower prices. We have had then, last year, an industry not supplied beyond its capacity and on the whole well employed, but securing, at best, very moderate and in many cases inadequate results, because constantly working against a falling market. The expectation of a turn for the better, which the very low range of values naturally keeps alive, off and on leads to a small rise being mistaken for a serious movement, and the modern practice of buying from hand to mouth emphasizes such a rise for a time, the absence of stocks compelling many to join who would otherwise wait. But the ground gained is almost invariably lost again. This has been characteristic of the market last year and indeed for some time: A low range of prices interrupted occasionally by spasmodic efforts at a rise, not resting on genuine demand, chiefly speculative and never outlasting in their integrity a series or even half a series of sales.

It need hardly be said how seriously the growers in the colonies are affected by the great depreciation of their produce, and how difficult it must be for them to adjust their costs of production and management to these low values. But it is not easy to see what, in the present condition of trade, could bring about an improvement except one of two things—either a great increase in the general spending power or a decided and unmistakable check to the growth of production. Of the former alternative there are at present few signs, but the latter is, we believe, in sight. There are indications that the expanding power of the great centers of production is reaching its limits. The home clips in Europe have long been stationary, and the same may now be said of the production in the United States. The River Plate clip rather fluctuates than advances, the average production of the past five years being but 5 per cent higher than that of the five preceding years. At the Cape, too, little progress has been made since 1888. But in Australia the production, aided by a succession of good seasons, has risen in a striking manner, the increase in the number of sheep being no less than 50 per cent in the short space of six years; and it is here that a check seems to be impending. The colonies of Victoria and New South Wales are reported to be fully stocked—in many cases overstocked. It is the same in such parts of Queensland as are used for sheep-growing, and though pastoral country in that colony is still unoccupied, there is very small likelihood of its being taken up in the present state of prices. With the increase in Australia arrested, the production of wool generally becomes practically stationary, and as soon as that fact is realized, some rise in the present exceptionally low value of wool can scarcely fail to follow.

LONDON, *January 9, 1894.*

A review of the past year shows on the whole unsatisfactory and disappointing results. The fine-wool industry has not prospered, nor has the year in its course brought the improvement in values which had been more or less confidently looked forward to on many sides, and which, it may truly be said, would at no time have been more welcome in the colonies than in this trying period of financial difficulties.

The year began under distinctly favorable conditions; prices were so low as to be practically safe, the industry was everywhere well employed, there were no stocks either of the raw material or of goods, and, better than all, no prospects of a serious increase in the supplies. A good forecast was therefore not without justification, nor can it be said that subsequent events have in any way belied the assumptions on which it rested. The supplies of the raw material have not only not exceeded but have actually fallen short of those of 1892, and as for the industry, however unsatisfactory the pecuniary results in many branches may be, its activity has on the whole been well maintained. If, nevertheless, the results have failed to come up to expectations, it is owing to factors which were certainly not apprehended a twelvemonth ago, namely, the financial disasters which the year had in store.

For the first four or five months the market took a course in accord with anticipation; it slowly gained ground and moved in fact in the right direction. But with the advent of summer, when the greatest pressure of supplies which the colonial sales now tend to concentrate upon the early part of the year was removed, when the coast seemed clear and everything led to the belief that matters would consolidate, the very reverse took place; business received a distinct check, and though the subsequent price fluctuations were not of a material kind, they yet all tended to weakness.

The causes for this are not far to seek. We will cite the American crisis first. It meant to the wool trade the almost complete cessation during the last six months of all American demand for both wool and woolen goods. The annual statistics from the United States are not yet to hand, and what quantity or sum this failure of demand represented to the Eurepean industry can not be given with accuracy. Possibly it is not extraordinarily large, as the first six months of the year were unaffected; but even if it is less than is generally imagined there can be no doubt about its being sufficient to seriously affect the general tone of the market. The tariff war between Russia and Germany, which also broke out in the summer, worked in the same direction. It considerably hampered the German industry by closing to it an important outlet and reduced the volume of its competition for the raw material. And while the export demand thus became contracted and increasing quantities of goods were thrown on the home markets, the consuming power of the latter was impaired by labor disputes—here in England, notably the coal strike—and by enormous losses in investments.

We will shortly allude to two other circumstances which, each in its way, has had a hampering influence. The first is the disproportion between the prices of wool and of tops. While wool has remained unchanged tops have in the course of the year experienced marked declines. The matter is complicated owing to the speculative character of the top trade and the absence of reliable data as to stocks, but there can be little question that the anomaly, however brought about, has been a very disturbing factor to spinners. The other point is the fashion which has favored the coarser classes of material at the expense of the finer ones. The manufacturers of the former have, of course, derived advantage from this, but for merino wool—and the preponderating colonial interest lies in fine wool—it has been an appreciable drawback.

The development of business has thus been impeded by various causes—some minor ones appertaining to the trade itself, but mostly and mainly extraneous—economical and financial. There is little doubt that but for them the year would have fulfilled its early promise and that some rise in values would have to be chronicled among its results.

For the past two or three months the new season in Australia has been in full swing and a considerable portion of the clip has passed into consumers' hands. The prices paid have been the same low prices which have been ruling here lately, and, except that the general tone is firm, nothing in these colonial transactions, nor in the state of the industry in Europe or America, shows so far any indication of a clear turn for the better.

The following gives the highest and lowest quotations during the last eight years of some leading descriptions of wool, the mean points, and the value in pence per pound as it stood on December 31:

THE EAST.

It is in dealing with the statistics of Eastern countries the greatest difficulty is encountered of securing even an approximation to a correct estimate of the number of sheep and their product in wool.. From the English consular reports I have prepared a statement of exports so far as they are given. No attempt has been made to reduce the weights to a common unit, as there is no guide for so doing, no common denominator for bales, packages, and bundles, all of which terms are employed. This compilation will be found in the appended tables. I have supplemented it by a summary of certain reports, submitted to the Department of State by U. S. consular representatives in Eastern countries in the year 1891. The subject is of interest from the standpoint of the wool manufacturers of this country, because of the important contributions of wools of the third class, derived from these countries. In 1893 more than one-fourth of the total importations of that class were obtained from the two countries, China and Turkey in Asia, and it is very probable the imports assigned to other countries were in reality produced in these or neighboring lands. I shall begin with the largest of the contributors, China.

CHINA.

Consul-General Leonard reported February 1, 1891, that the bulk of what is commercially known as China wool comes from Mongolia. The flocks vary in size from 500 to 2,000 head, and the wool comes to the market as ball, loose, rope and lamb's wool. Generally the wool is gathered by shearing; but in ball wool, which comes from Chi-li, the wool is combed with wide combs from the backs of the sheep and afterwards twisted up into balls. Rope wool is so called because it is made up in coils in the interior for transportation to seaboard. A bale weighs about 150 pounds avoirdupois. Until within a few years the exportation of wool from China was trifling. The following table shows

the amount exported in piculs of 133⅓ pounds avoirdupois each from Shanghai during the years 1880 to 1890:

YEARS.	Piculs.	Pounds.
1880	5,923·43	789,790
1881	7,277·51	970,334
1882	8,699·17	1,159,889
1883	13,742·54	1,829,005
1884	19,889·63	2,651,950
1885	24,344·88	3,245,984
1886	26,065·81	3,475,441
1887	38,570·14	5,142,685
1888	49,950·19	6,660,025
1889	73,906·49	9,854,199
1890	80,143·91	10,685,855

From the British Statistical Abstract I take the following figures, showing the imports from all China, exclusive of Hongkong.

CHINA, EXCLUSIVE OF HONGKONG.

YEARS.	Exports raw wool.		Imports manufactures of wool.	Average value of Haikwan tael.
	Quantity.	Value.		
	Piculs.	*H. taels.*	*H. taels.*	*s.* *d.*
1881	5,986	39,000	5,854,000	5 6½
1882	22,755	199,000	4,496,000	5 8½
1883	33,825	275,000	3,893,000	5 7¼
1884	34,799	269,000	3,710,000	5 7
1885	43,005	328,000	4,824,000	5 3½
1886	48,360	454,000	5,631,000	5 0½
1887	56,261	460,000	5,425,000	4 10¼
1888	81,789	654,000	5,098,000	4 8¾
1889	102,182	934,000	3,975,000	4 8¾
1890	98,739	853,000	3,643,000	5 2¼
1891	135,363	1,112,000	4,695,000	4 1¼

I should not omit to revert to the great and growing importance of the trade in sheeps' wool from northern China, described above. It is evident that this commerce may well assume huge dimensions and become one of the principal exports of Manchuria and Mongolia.

On this subject Her Majesty's consul at Tientsin says that every year wool is collected from more and more remote regions from Mongolia, the province of Kansuh, and northern Thibet. It is all brought to the town of Kuei Hwa Cheng, the great entrepôt for wool, where it is repacked and dispatched to Tientsin.

The difficulties of transport are great; sometimes, when camels are scarce, wool has to be left at Kuei Hwa Cheng for six months, waiting for the next season, when camels can be obtained.

The natives up-country exercise no care in sorting or packing the wool; dirt and sand are willfully mixed into the strands; and, although the foreign merchants at Tientsin, who buy by weight, deduct for all the dirt thrown out by the cleaning machines, still the practice continues, and a large quantity of sand is transported in the wool from distant localities to Tientsin, at a cost of something like 15*s.* per cwt.

In sorting out the sheeps' and goats' wool a small lump is occasionally found of exceeding fine quality, which would command a high price if it could be obtained in any quantity; but the first hands who collect the wool in the remote west have not yet found it worth their while to separate the different sorts.

Some years ago half a dozen merino rams were sent up to Mongolia. It speaks much for the expertness of the New York customs officials that in due course they detected the improvement in the wool, and made inquiries as to whether merino wool was exported from Tientsin.

It might have been expected that the carpets made locally of sheeps' and camels' wool would be more largely exported than is actually the case. The cheapest quality cost about 4*d.* per square foot.

There are no regular factories, the makers work in their own houses, and it is seldom that more than one carpet is made at once.

Left to themselves the Chinese work in the same groove, and make no attempt to improve, but under foreign supervision much better work could be turned out. With artistic designs, fast colors, and a neater finish, there is little doubt that a very superior article could be produced, and with such cheap materials and labor it seems as if a profitable trade could be developed. (*a*)

TURKEY IN ASIA.

From Turkey in Asia, the United States imported in 1893, 13,316,069 pounds of wools of class three, valued at $1,202,852. In March, 1891, the United States Consul-General, at Constantinople, Mr. Z. P. Sweeney, made a report on sheep and wool in Asiatic Turkey, from which I take the following extracts:

SHEEP DISTRICTS.

The whole of Asiatic Turkey may be considered as a wool-growing country, because every province of Asia Minor produces this article to a great extent. It is interesting to note that the quantity produced in every district seems to depend largely on the habits, character, and civilization of the inhabitants of the respective provinces. Thus the greatest exportation of wool in Turkey in Asia, according to the official statistics, is made from Mesopotamia, where the inhabitants are all nomads and have no other occupation than taking care of very numerous flocks of sheep and migrating during the whole year from one region to another, according to the climate and foraging conditions of the country.

FLOCKS.

Flocks of sheep are not at all as numerous in western and northern Asia Minor as in the valleys of the Euphrates and Tigris. This is, of course, due to the fact that

in those parts of Anatolia the inhabitants are much more occupied in cultivating the country than traveling all the year round with their tents and flocks of sheep. A relatively higher degree of civilization and less nomad life doubtlessly prevail among the people of Anatolia than those of the desert regions of Mesopotamia.

WOOL CLASSIFICATION.

Another important point which is generally worth noticing in Asia Minor is that the quality of the wool in each district seems to be influenced by the climatic and topographical conditions of the country. Thus the wool of the flocks of sheep of the plains of Mesopotamia, and which belong to the Arabs (these people inhabit the whole of the valley of the southern Tigris and are divided into *achirets*, or tribes, to whom belong the flocks of sheep), and which pass the winter outside, owing to the mild climate of the country, is of much finer and cleaner quality than the wool of the flocks of the north, viz, of the province of Koordistan, where the severe winter obliges shepherds to keep their sheep under peculiar roofs, which are called *aghel* in Turkish, and are always inadequate to cover the numerous animals, which very often lie in dirt, and thus the wool is deteriorated to a great extent.

WOOL-WASHING.

If we continue our examination by comparing the different samples of wool, we find that it is cleaner wherever there are several small rivers which the animals could cross. Wool is free from dust when the flocks live in mountainous regions. There is, for example, a far greater amount of dust in the goats' wool coming from the plains lying east of Konieh, or Iconium, than in that coming from Angora and other regions which are mountainous.

BREEDS OF SHEEP.

With regard to the different families of sheep in Asia Minor, it must be pointed out that there are actually very few differences among the races of various districts, and these differences can be divided principally into two distinct classes. First, the flocks of Anatolia (excluding Mesopotamia) belong, generally, to the family known in Asia Minor as "Caraman." * * * Second, the other principal family is that of Mesopotamia, but the sheep belonging to the same differ essentially, according to the different regions, and no general name is given to it. "Karadi" or "Karakash," "Awassi," "Mendelli," "Kerkouk," and "Djaff" are the names given to the different qualities of wool produced in Mesopotamia. The fact is that the flocks in Mesopotamia have been crossed with Persian sheep, of which they maintain the principal element in their blood.

EXPORTS.

It is reported that 35,000 bales are exported yearly from the whole district of Mesopotamia, and the greatest proportion of this quantity goes to the United States.

VILAYET OF ANGORA. (*a*)

* * * * * * *

BREEDS.—All the flocks of the Angora vilayet, about 500 in number, belong to the well-known Caraman breed, which in many respects resembles the crossbreed.

EXPORTS.—Out of the total production of 1,835,547 okes (*b*) during 1890, only one-third of the clip of the Angora district and half of the total clip of the districts of Kerchehir and Yoozgat have been forwarded to foreign countries, whilst the remainder, together with the whole production of the district of Cesarea, has

a Comprising the districts of Angora, Kerchehir, and Yoozgat.

b 1 oke=2.8 pounds.

been appropriated for local consumption. On the whole, the exports from this vilayet are decreasing, local consumption increasing every year, especially for the manufacture of carpets.

DOMESTIC USE.—The quantity of the clip retained for local and domestic manufacture is used in making curtains, canvases, carpets, rugs, covers, stockings, bags, and coarse overcoats.

WASHING AND SHEARING.—In this vilayet the wool is never washed on the backs of the sheep, but only after being sheared for the local use, so that it stands about 50 per cent of the original weight.

As regards exportation, we must state that washing is practiced, comparatively, only on a very small scale, because it does not pay the exporters.

EXPORTS TO THE UNITED STATES.—Nearly all the washed wool for export from this country is forwarded to the United States, the proportion in this case being about 60 per cent of the original weight. * * *

CLIP.—Each male sheep of this vilayetis estimated to give annually 1¾ okes of wool, whilst the females give only 1¼ okes. It is estimated that both males and females exist in equal numbers in the flocks. About 100,000 sheep are sent from this vilayet to Constantinople, Smyrna, and Brusa for consumption, and an equal number are killed for local demand, annually.

SHEARING.—The male sheep are sheared in the province from the 15th to the 30th of April and the females only towards the end of May. During the year 1890, besides the 1,835,547 okes, there were also 100,000 okes of wool sheared from the skins, as well as the autumn clip of 350,000 okes.

NUMBER OF SHEEP AND PRODUCTION OF WOOL IN THE VARIOUS DISTRICTS OF THE VILAYET OF ANGORA IN 1889 AND 1890.

NAME OF DISTRICT.	Number of sheep.		Production of wool.	
	1889	1890	1889	1890
			Okes.	*Okes.*
Angora	472,742	625,840	709,113	938,010
Kerchehir	185,093	184,781	277,639	277,171

Cesarea	132,169	140,421	198,253	210,631
Total	1,014,381	1,223,699	1,521,570	1,835,547

VILAYETS OF BASSORAH, BAGDAD, AND MOSUL. (*a*)

SHEEP AND WOOL.—The statistics of the above three vilayets, or provinces, give a total of 3,600,628 sheep for 1888, and 4,204,851 sheep for 1889, respectively. It must be observed that these figures, although drawn from official reports, can not be relied upon, because the official reports are based upon the taxes collected for every head of sheep, and as there are many nomad tribes who escape paying the tax by crossing the frontier into Persia when the collectors of the tax arrive and returning as soon as the officials have left, it is believed that the correct amount for the year 1889 is 6,000,000 sheep for the three vilayets mentioned.

From the aforementioned vilayets 34,800 bales of wool were exported in 1888 and 36,800 bales in 1889, the net weight of each bale ranging from 115 to 120 okes.

BREEDS.—The principal family of sheep living in the provinces of Bassorah and Bagdad is that of "Chipal." The main feature of this particular breed is that the wool is rather finer than the other kinds exported from Mesopotamia, the only drawback being the great proportion of colors existing in their wool. Only about 20 per cent of the flocks contain white sheep, the remainder being black, gray, fawn, and

a Comprising the districts of Bassorah, Amara, Kerbela, Bagdad, Suleymanie. Kerkok, and Mosul.

brown. The Chipal breed is very common in these two provinces. Roughly speaking, 80 per cent of the sheep of this region belong to this breed, the remainder to the Karakash breed, the wool of which is used for the manufacture of carpets, whilst the Chipal wool, known in the United States as "genuine Bagdad," is used in the manufacture of clothing.

In the province of Mosul the predominant breed of sheep is that of the vilayet of Diarbekir, viz, the Arab breed, the wool of which is known in the United States as "Awasi;" the other breed is the Karakash, already mentioned. The Arab, or Awasi, sheep are met with in the desert of Mesopotamia, whilst the Karakash sheep generally live near the high, mountainous region of the frontier, because, their wool being much heavier than the Awasi sheep, they can not bear the excessive heat of the desert, which they frequent during the winter season.

VARIETY OF WOOL.—It is interesting to note that the climate influences to a great extent the distribution of the different herds of sheep in this region; for instance, the more we get to the south the wool becomes finer and finer, changing from the Karakash to the Awasi, and from this last to the finest of all, the Chepal or Bagdad wool, which grows in the warmest districts of Asia Minor. In the same way the nearer we approach to the eastern and mountainous regions the wool grows coarser and coarser, so that the sheep found in the mountainous regions of Persia bear a wool which is heavier than the usual Karakash and is distinguished from this wool by the name of "Persian Karakash."

EXPORTS.—Before the opening of the Suez Canal the wool of these districts was sent to Aleppo and thence to Marseilles, which was the principal market for them. Lately, however, there has been a large trade with the United States, whereto large quantities are now being shipped direct from the Persian Gulf.

Exports from these districts are increasing every year, as local consumption is diminishing on account of the importation of European stuffs, which are growing more and more into favor and replace local manufactures.

Twenty-three thousand and seventy-five bales of wool were shipped to London direct from the Persian Gulf in 1889 and 22,400 bales in 1890, and were mostly consumed for the home trade in England, only a small part being shipped to the United States. * * *

WASHING.—In the vilayets of Bagdad and Bassorah the sheep, before being sheared, are washed to a certain extent in the rivers, whilst in the vilayet of Mosul the wool is only washed after it is sheared, so that it shows about 75 to 80 per cent of the original weight.

WOOL CLASSIFICATION.—The wool of the vilayet of Mosul is generally of the Karakash breed, whilst in Bagdad and Bassorah wool is of the Chipal breed. The proportion of these different qualities in the total exports of 36,800 bales for 1889 is as follows:

Chipal breed, 50 per cent, of which 80 per cent was colored and 20 per cent white; Awasi, 30 per cent, of which 80 per cent was white and 20 per cent colored; Karakash, 20 per cent, of which 80 per cent was white and 20 per cent colored.

NUMBER OF SHEEP IN EACH VILAYET FOR 1888 AND 1889.

Suleymanie	170,484	179,070
Imperial farms, excluded from official lists	63,000	120,000
Total	1,025,660	1,211,420

VILAYET OF DIARBEKIR. (*a*)

SHEARING AND WASHING.—The Arab sheep, before being sheared, are always conducted through rivers, which clean them to a certain extent, and the weight of the wool diminishes about 8 to 9 per cent.

Karakash wool is never washed when on the back of the sheep, but only after shearing, losing in washing from 25 to 35 per cent.

Arab wool very often is washed a second time after being sheared.

DOMESTIC USE.—About 150,000 okes are used for the same purposes as in the other vilayets.

MOHAIR GOATS AND SHEEP.—According to the official reports there were in this vilayet in 1889 1,084,000 sheep, 191,000 mohair goats, and 799,000 black-haired goats.

For the year 1890 there were 1,053,000 sheep, 186,000 mohair goats, and 751,000 black-haired goats. About 2,000,000 black goats and sheep are killed in the vilayet every year and sent away for consumption.

CLIP.—The total clip of this vilayet is estimated to be about 1,200,000 okes, composed of three distict qualities, viz, 40 per cent is the well-known Karadi, or Karakash, quality (the breed of sheep which produce this particular quality is known in Asia Minor under the name of "Kurdestan," and the wool is called "Kurd" wool); 30 per cent is composed of a particularly fine wool called Arab, or Awasi, wool, the finest production of the province; the remaining 30 per cent is the poorest of the whole production, which comes from all parts of the province.

BREEDS.—The Arab sheep are found to the south of Mardin, where they remain winter and summer, whilst the Karakash sheep emigrate in summer to higher regions towards the north of Mardin, near Diarbekir, because they can not support the excessive heat of the desert, their wool being much heavier than that of the Arab sheep.

To the south of Diarbekir, in the desert region which lies between Aleppo and Mosul, there are about 6,000 tents of nomad tribes which are constantly moving about and

a Comprising the districts of Diarbekir, Mardin, and Djizire.

whose sheep are not included in any of the official lists. Some of these tribes do not pay any tax at all, and others pay only insignificant sums as compared with the number of sheep they possess, which is estimated at more than 300,000 head, with a wool production of about 350,000 okes. This wool is sold by the tribes as they go on their journey through the different provinces.

VILAYET OF KASTAMOONEE. (*a*)

BREEDS AND WOOL.—The flocks of sheep in this vilayet also belong to the Caramania breeds, there being little difference between the respective clips of the various districts. The wool exported from the districts of Kankaree and Boli is the finest of all, being full growth and fine in quality.

CLIP.—The total clip may be estimated in round numbers at 600,000 okes for the whole province, of which 100,000 okes only are exported, whilst the remainder is appropriated for local consumption for the same purpose as in the province of Angora.

SHEARING AND WASHING.—The above exports include 10,000 okes of wool exported on sheepskins forwarded without being sheared to foreign counties. The wool is exported from this vilayet in its greasy state, and it is only washed for local use so as to lose about half the original weight of the sheared wool.

MOHAIR GOATS.—There are in this province about 554,840 mohair goats.

The following statement shows the number of sheep in each district of the vilayet of Kastamoonee in 1890:

Kastamoonee	169,704
Kankaree	122,406
Boli	149,601
Sinope	65,265
Total	506,976

VILAYET OF KONIEH, OR ICONIUM. (*b*)

NUMBER OF SHEEP AND EXPORTS OF WOOL IN EACH DISTRICT OF THE VILAYET OF KONIEH IN 1890.

DISTRICTS.	Exports of wool.	Number of sheep.
	Okes.	
Konieh	318,945	495,800
Teke	150,570	171,800
Hamid, or Sparta	70,950	98,400
Bordour	66,375	59,000
Nigdeh	178,600	195,000
Total	785,440	1,020,000

WOOL.—The total clip in this province is more than 1,500,000 okes, 785,440 okes of which are exported.

SHEEP.—Roughly speaking, the sheep are pretty evenly divided, half being males and half females. A male sheep yields yearly about 2 okes of wool, whilst the female yields not more than 1·5 okes per head. The average yield is about 1·5 okes per sheep per year. * * *

WOOL CLASSIFICATION.—There is but very little difference of quality between the wool of the vilayet of Konieh and that of Angora. This last name is given in Europe and America to Konieh wool, and in the United States all wool coming from western Asia Minor passes for Angora wool. * * *

a Comprising the districts of Kastamoonee, Kankaree, Boli, and Sinope.

b Comprising the district of Konieh, Teke, Hamid (or Sparta), Bordour, and Nigdeh.

SHEEP AND WOOL IN SYRIA. (a)

The Beirut consular district is divided into five vilayets, or provinces, viz: (1) Adana, with the city of Adana as capital and Mersine as its seaport; (2) Aleppo, of which the city of the same name is the capital and Alexandretta the principal seaport; (3) Beirut, with Beirut city as capital of the vilayet and principal seaport; (4) Mount Lebanon; and (5) Syria proper. Beirut city is also the port for Mount Lebanon and for the villayet of Syria, of which latter Damascus is the capital, the ports of minor importance being Tripoli, Sidon, Acca, and Haifa, all in the Beirut vilayet. These provinces, with the exception of the vilayet of Adana, compose what is geographically designated as Syria.

The vilayet of Beirut, with Mount Lebanon, and notably the vilayet of Aleppo and adjacent countries and the vilayet of Syria, are the most important wool-growing provinces within this consular district, as will be noticed from the following separate reports:

VILAYETS OF BEIRUT AND MOUNT LEBANON.

The area of the Beirut vilayet, according to statistics furnished by the engineer of the vilayet, is 4,971,000 hectares (12,283,341 acres), and that of Mount Lebanon, based upon information furnished by the Lebanon government, is 600,000 hectares (1,482,600 acres).

The number of sheep constituting a flock varies in every locality, but on an average it is composed of from 50 to 1,000 sheep. The total number of sheep in the Beirut vilayet and Mount Lebanon was estimated at 580,000 in 1890, exclusive of something like 200,000 or 300,000 head imported from the vilayets of Erzerum and Mosul for slaughter.

There are two varieties or breeds of sheep in this province, known as "Awassy" and "Moor," respectively. The former is distinguished from the latter by its long and straight wool, both white and black, and forms by far the largest proportion of the sheep raised; the other produces a reddish brown and shaggy wool. The Moor sheep is mainly kept for domestic purposes, notably in Mount Lebanon, and, when fattened, furnishes an excellent food during the winter months. * * *

The average annual quantity of wool grown within the Beirut vilayet and Mount Lebanon is estimated at about 2,000,000 pounds. By far the largest portion of this amount is exported to the United States, the balance being shipped to Europe (France and England) or used for local consumption.

The principal ports of export are Beirut and Tripoli.

The annual cost of keeping a sheep is variously estimated at from 58 to 89 cents, or an average of 73.5 cents.

The weight of each fleece varies from 3 to 7 pounds. The average price breeders receive per pound of wool is from 7 to 8 cents. Every 80 to 100 sheep are watched over by one shepherd, whose wages run from 18 to 25 cents daily, or an average of 21 cents.

In many districts sheep need no shelter in the vilayet of Beirut. In Mount Lebanon, however, they have to be housed at night during the short winter months. The loss of sheep and lambs by exposure or neglect is very small, but in times when diseases prevail the losses are severe. * * *

VILAYET OF SYRIA. (a)

Sheep are kept and wool is grown in every mutessarrifiate and caimakamiate in this vilayet, but notably in the districts of Joulan, Jebel-Druze, Balka, Hauran, Homs, and Hamah.

The total area of the province of Syria is 4,856,000 hectares (11,999,176 acres).

---

a From material partly furnished by United States Consular Agent Nasif Meshaka, of Damascus.

The breed of sheep kept for wool-growing and breeding purposes in this vilayet is called "Ghanam-El-Abiad" or "Awassi" (white sheep); in some places it is known as "Ghanam-El-Shakra." Five per cent of its wool is of a reddish and black color, the rest, as the name of the sheep indicates, being white. There is another variety of sheep known in Syria as "Moor," already spoken of in the Beirut report. It is imported from Erzerum for slaughter.

The number of sheep usually kept in flocks varies greatly; 100, however, is the average number generally watched over by one shepherd.

The exact total number of sheep in this vilayet it is not possible to ascertain. There is, however, a tax imposed on goats and sheep of 3½ piasters per head (15.4 cents), which produced the sum total of 5,257,134 piasters ($221,313.90) in the year 1890. It is estimated that two-thirds of this amount had been levied upon sheep; this would give a total of 1,001,359 sheep for the vilayet of Syria. * * *

Wool is gathered in fleeces, each fleece being carefully rolled up separately. The weight of a fleece is from 3 to 7 pounds in a good season; in a poor year it does not exceed 4 pounds. * * *

The different local designations of the wool grown in this province are the following: (1) The "Nouaimi," or "Joulani," raised by a tribe inhabiting the Julan district; (2) the "Belkawi," named after the locality known as Balka; (3) the "Jabali," grown in Jabel-Druze, in the mutessarrifiate of Hauran; and (4) the "Khaldi," raised by the tribe called Beni Khalid, inhabiting the mutessarrifiate of Hamah. The "Nouaimi" is superior in quality to the rest of the wool grown in this vilayet.

The general commercial name under which all these various kinds of wool are known is "Soury," or Syrian, and the principal markets in which the same is warehoused, bought, sold, and prepared for export are the cities of Homs, Hamah, and Damascus, in this vilayet, the ports of export being Tripoli and Beirut, in the Beirut vilayet.

The greater part of all the wool exported to the United States is unwashed. When washed it is generally shipped to either Marseilles or Leghorn. * * *

VILAYET OF ALEPPO. (*a*)

The vilayet of Aleppo is one of the provinces in Syria in which sheep are raised on a considerable scale.

The district of Aleppo, more properly speaking the mutessarrifiates of Orfa and Deir-el-Zor (the latter has lately been detached from the administration of the vilayet of Aleppo), are the localities where the raising of sheep and growing of wool acquire the greatest importance.

In the mutessarrifiate of Marash and in the caímakamiates of Aintab, Antioch, Killis, Harem, Djesser-el-Shoghr, and their dependencies sheep are also kept; but their number is limited, the peasants of these districts being farmers rather than shepherds.

The area of these vast tracts of land can only be determined geographically; they are uncultivated and inhabited only by Bedouins, i. e., insubordinate Arabic nomadic tribes, who traverse their entire extent, a part of which only belongs to the vilayet of Aleppo. These nomads shift from place to place in search of pastures, wintering under the open sky in the warmest regions and seeking the localities offering the best pasturage for their flocks.

In the colder districts of Marash, Aintab, Antioch, Killis, Harem, Djesser-el-Shogr, Idlep, etc., sheep are kept in caves during the winter, and are fed on a mixture of hay and straw.

The number of sheep which usually compose a flock varies greatly. Each family forms, out of the sheep they possess, one or more flocks, watched over by members of the family. Eighty to 100 sheep are generally confided to one person; sometimes more. Sheep intended for slaughter march in flocks of from 1,000 to 2,000 and even 3,000, with one shepherd for every 100 sheep.

---

a Prepared from material furnished by United States Consular Agent F. Poche, of Aleppo.

The total number of sheep which graze in the vilayet of Aleppo from spring till autumn, coming from Irak-Arabi and from the desert of Syria, is estimated by the provincial authorities at 2,500,000 in round numbers. The mortality in the year 1888–'89 has reduced this number to about 2,000,000, divided principally among the following tribes: Hadidi, Anezi, El-Weldeh, Beni-Said, Ghayar, Ewlad-Ali, Garamta, Aboo-Dibish, Aboo-Kemal, Aboo Leil, El-Mawali, El-Saab, Aboo-Halahel, Beni-Haled, Beni-Zed, El-Omerat, El-Majadmeh, El-Shaher, El-Neim, Aboo-Hassan, El-Baghara, El-Meshahdeh, Beni-Tai, and others less important.

All the sheep raised by these tribes belong to the breed called "Awas," originally from Bagdad, which, in crossing with other races, have lost the original fineness, but gained in the length of their wool. The best wools as regards fineness are those coming from sheep raised by the tribes called El-Tayawi, and El-Nêim, who take greater care of their flocks and give them, two months after the shearing and several weeks apart, two or three sulphate baths, and also administer to them small doses of sulphur internally. By this treatment the sheep seem to enjoy immunities from the skin diseases which influence the beauty of wool.

Next to the wool grown by these two tribes, which is limited in quantity, comes that of the Hadidi. The wool that the tribes Anezi grow, though a more brilliant white than that of the Hadidi, is of inferior fiber. * * *

The wool from the Aleppo vilayet is mostly exported, either washed or unwashed, to the United States and to Europe, a large portion going to Marseilles, whence it is again in part reexported to the United States. * * *

The wools grown in the vilayet of Aleppo are divided into seven principal classes: (1) The wool called "Hadidi," which embraces not only the wool grown on sheep raised by this tribe, but comprises also all that produced by the different tribes above mentioned; (2) the wool called "Anezi;" (3) "Deir-El-Zor;" (4) "Fellahi." These four categories are sold in the city of Aleppo, and three of them are known in Marseilles under the name of "unwashed Persian wool," the fourth, or "Fellahi," being designated as "red Persian unwashed." When washed, they are known under the commercial name of "Aleppo washed wools." Classes 5, 6, and 7 are called, respectively, "Arabi," "Barazi." and "Milli." The latter is by far the coarsest of these seven categories, while "Arabi" is superior even to "Hadidi," and is known in the market of Marseilles under the denomination of "unwashed Orfa." All three grades are usually to be found warehoused in the city of Orfa, in this vilayet.

Besides the varieties enumerated, wools coming from the Mardin district are also sold in the markets of this province. Mardin is a city in the vilayet of Diarbekir, adjacent to the vilayet of Aleppo, a considerable distance northeast of the city of Aleppo, but not far from Orfa. They comprise three categories of wool, viz, the "Awas," the "Caracash," and the "Kurdes." The first of the three is generally washed on the sheep's back by forcing the sheep to pass once or oftener through a stream of water. By this system, followed by that of the washing of the fleece at Aleppo before marketing, a result of between 60 and 70 per cent is obtained. The "Caracash" wool is also washed by the same process, only less thoroughly. The Kurdish wool arriving at Aleppo is sold and exported unwashed. * * *

The quantity of wool annually exported is estimated at about 2,200,000 kilograms (4,850,670 pounds) and divided among the following countries:

	Pounds.
United States	297,655
France	3,527,760
Turkey	540,188
Italy	330,728
England	154,339
Total	4,850,670

The wools exported to Turkey are generally sent to Smyrna and there mixed with the different varieties of that locality. They are reexported to the United States. * * *

VILAYET OF ADANA (ASIA MINOR).(*a*)

Properly speaking, most of the sheep kept in this province for wool-growing purposes come in flocks from the adjoining vilayet of Caramania for pasture and pass the winter mostly in the districts known as the mutes-sarrifiates of Selefkeh and Adana. The total area is roughly estimated at 40,000 square kilometers (9,884,000 acres.)

The flocks usually number from 200 to 300 sheep, watched over by two shepherds, and the best estimate of the total number of sheep is about 250,000. * * *

The wool grown in this province is not made into fabrics or cloths, but is wholly exported, principally to Marseilles, whence it is reexported to the United States; a small quantity is also shipped to Smyrna and Constantinople.

The commercial names of the Adana wool proper, produced by sheep kept on the plain of Yureli, are: (1) "Melemendji," 70 per cent of which is white and 30 per cent black; (2) "Karakayoli," 75 per cent being black and 25 per cent white; and (3) "Kosserauli," of which 90 per cent is black and only 10 per cent white.

In quality it ranges in the order given, and the name or breed of the sheep which produces it is called "Caramania."

The total quantity of wool produced in this district is estimated at 350,000 to 500,000 pounds, and the average weight of a fleece is from 6 to 8 pounds. To this 500,000 pounds must be added about 750,000 to 1,000,000 pounds of wool coming into this province from the adjacent vilayet of Caramania, which is sold in Mersine for export under the commercial designations of "Cesarea" and "Koniah" wools. About 85 to 90 per cent of these wools are of a yellowish or dirty white color, the rest being black. * * *—Erhard Bissinger, United States Consulate, Beirut, April 16, 1891.

Consul Jewett, in January, 1891, reported the following table, showing the number of sheep and goats in the province of Sivas:

NAME OF KAZA.	Sheep.	Goats.	Mohair goats.
Sivas	707,946	38,536	6,618
Azizieh	141,530	66,684	1,302

Alijura	15,366	34,221	.....
Total	1,071,265	965,055	61,010

a Prepared from material furnished by Acting United States Consular Agent A. Kenn, of Mersine.

Vice-Consul Clark, of Jerusalem, reports the total number of sheep in the three provinces of his jurisdiction to be as follows:

Gaza, 2,000; Nabloos, 3,000; and Hebron, 5,000. All are of the same kind, called the Barbary broad-tailed sheep. The clip of 1889 was about 350 cantars (210,000 pounds), while that of the year 1890 was about 300 cantars (180,000 pounds). The whole of the wool is shipped to Smyrna, and what is exported is never washed, being mixed with better qualities of Asiatic wool.

1886	132,130	31,711,604	35,312	6,350,731
1887	109,164	52,749,315	30,447	6,698,408
1888	131,743	44,858,606	28,054	5,610,923
1889 (9 months)	126,806	48,820,510	18,185	5,440,622

It will thus be seen that the increase in the shipments, if it can be called an increase, is not of sufficient importance to be entitled to consideration. If there is, likewise, some increase in the official value of the wool, it is only an apparent increase, owing to the fact that it is now stated in Argentine currency instead of gold.

WOOL EXPORTS.—The following table shows the countries to which the sheepskins and wool clip of 1888 were shipped:

COUNTRIES.	WOOL, UNWASHED.		SHEEPSKINS.	
	Quantity.	Value.	Quantity.	Value.
	Kilograms.	*Dollars.*	*Kilograms.*	*Dollars.*
Germany	30,335,537	10,328,569	1,745,907	349,181

Total	131,743,339	44,858,606	28,054,616	5,610,923

It will be borne in mind that this wool was all shipped in the dirt—one-third being wool and two-thirds of it being dirt; so that, when figured down to hardpan, the product of the Argentine Republic for 1888, with its 70,000,000 of sheep, was only 98,807,505 pounds of washed wool, a much smaller amount than this country has hitherto been receiving credit for. Indeed, as a wool-producing country, these figures place the Argentine Republic below the United States; since, according to our census of 1880, our product of washed wool from 40,000,000 of sheep was 155,681,951 pounds. In other words, while the Argentine sheep yield an average of 1½ pounds of clear wool to the fleece, those of the United States yield almost 4 pounds to the fleece.

The wool shipped to the United States, as given in the foregoing table, was exclusively the Cordova carpet wool, it being the only class that it is possible to send to our market at a profit under our present tariff laws.—U. S. Consul E. L. Baker, December 22, 1889.

WOOL INDUSTRY.

For many years to come, the leading industry of the Argentine Republic must continue to be the raising of sheep and the production of wool. The history of sheep-farming dates back to 1550, when the Merinos were introduced from Spain; but it received no attention whatever from the early settlers of the country. Even as late as 1840 sheep were of no value in a commercial point of view. They were allowed the run of the pampas as a cheap, but not a desirable, article of food. The wool was not worth the expense of carting it to town, and it was often used for litter.

The first great impulse was given to the industry about thirty-five years ago, when a few Scotch and Irish sheep-farmers, seeing the wonderful possibilities which the Argentine Republic possessed for growing sheep, began to improve the stock by the importation of the finer Negretti and Ram breed.

In 1852 the number of sheep in the entire Republic was 5,500,000; but with the refinement of the wool a foreign market sprang up, and in 1860 the number had increased to 14,000,000. Then followed our civil war, which caused an unprecedented demand for foreign wools and sent the price up to fabulous figures. Everybody

that could raise money enough to buy a flock of sheep went into the business, and in 1867 the number of sheep was estimated to be 40,072,312. In 1877 it had reached 48,498,688 and in 1888 it was 66,701,097, according to the official estimates. The great seat of the wool industry is the province of Buenos Ayres, the rich, succulent, grasses of whose boundless pampas afford natural pasturage to the foot of the Andes; but the other provinces have all a few sheep. The following table shows the number of sheep in each province and territory:

PROVINCES AND TERRITORIES.	Native.	Mixed.	Pure blood.	Total.
Provinces:				
Buenos Ayres	12,980,544	38,224,204	353,002	51,557,750
Santa Fe	1,004,255	1,973,127	.....	2,977,382

Pampa	600,292	1,044,305	25,796	1,670,393
Rio Negro	232,120	55,820	.....	287,940
Terra del Fuego	280	.....	2	282
Total	24,322,214	42,002,871	381,012	66,701,097

There are no inconsiderable numbers of sheep, also, in the territories of Chuput, Santa Cruz, and Neuquen, but they were not included in the last census of 1887.

There also 47,738 llamas in the province of Jujuy employed as beasts of burden, while the number of guanacos, vacuñas, and alpacas, as they roam wild over the far pampas and mountain slopes, can not even be estimated.

It appears from the foregoing returns that in the province of Buenos Ayres there are 171 sheep per square kilometer and in the entire Republic 22 per square kilometer. The average weight of ewes is 20 to 25 kilograms and of rams and wethers 30 to 35 kilograms.

Tho number of sheep in the Argentine Republic is equal to 17,787 per 1,000 inhabitants.

VALUE OF SHEEP.—The value of the sheep in the Argentine Republic is thus stated by Sr. Carrasco, director of the census:

Native sheep	$36,067,750
Mixed breeds	104,846,082
Pure blood	6,319,870
Total	147,233,702

CONDITION OF THE INDUSTRY.—It would seem from the foregoing figures that the sheep industry of this country is not quite so flourishing as it was a few years ago. Relatively, since the agricultural resources began their development, it is not so

important as it has been; but it is not possible to say if there has been any retrograde, as the returns of sheep are only based on estimates and calculations, and every person who undertakes to publish statistics makes use of such figures as he may have at hand.

Thus, Mr. Mulhall, in his Handbook of the River Plate, estimated the number of sheep in 1884 at 70,896,000; while the President, in his last message in 1888, four years later, put the number at 70,453,665; and now Sr. Carrasco places the number at 66,701,097, nearly 4,000,000 less. While the industry may not actually be on the decline, there are several reasons which would indicate that there is a temporary decrease in the actual number. In the first place, the losses from floods, foot rot, and starvation for the last two or three years are estimated by many millions; and, in the second place, there is now a steady market in Europe for mutton carcasses. But even so the Argentine Republic has a larger number of sheep than any other country in the world, Australia following with 58,052,180 and the United States with 48,322,331. Sr. Carrasco puts the value of the flocks at $144,233,702, while Mr. Mulhall estimates it at only $136,000,000, about $10,000,000 less; and he distributes the industry among the different nationalities as follows: Argentines, $73,000,000; Irish, $30,000,000; Scotch, $7,000,000; Basques, $20,000,000; total, $136,000,000.

WOOL CLIP COMPARED WITH OTHER COUNTRIES.—The wool clip of the country bears a very small proportion to the number of sheep. This is seen from the estimate of the world's clip for 1886:

COUNTRIES.	Number of sheep.	Total wool clip.	Clip per sheep.
		Pounds.	*Pounds.*
Argentine Republic	69,000,000	261,000,000	3·8
Australia	66,000,000	390,000,000	5·8
United States	48,000,000	210,000,000	4·2
Cape Colony	11,000,000	52,000,000	4·7
European countries	194,665,000	665,000,000	3·4
Other countries	19,000,000	76,000,000	4

From this it will be seen that the yield is 3·8 pounds of "dirty," or unwashed, wool; and, by being always thus shipped in the grease, River Plate wool suffers more from shrinkage than either Australia or Cape Town, as the net results are as follows:

COUNTRIES.	Shrinkage.	Net yield.
	Per cent.	*Pounds.*
Argentine Republic	65	91,000,000
Australia	44	220,000,000
Cape Colony	30	36,000,000

I have heretofore called the attention of the Department to this fact, and stated that, as a wool-producing country, "these figures, according to our census of 1880, place the Argentine Republic really below the United States in clean yield."

VALUE OF ANNUAL YIELD.—In regard to the value of the wool clip, including fleeces and sheepskins, I have no way of reaching it except by taking the tables of exports. The following are the figures of the last ten years:

YEARS.	WOOL.		SHEEPSKINS.	
	Quantity.	Value.	Quantity.	Value.
	Tons.	*Dollars.*	*Tons.*	*Dollars.*
1881	103,876	31,446,495	32,339	4,639,437
1882	111,009	29,978,960	22,353	4,231,718
1883	118,403	29,600,918	26,564	5,035,886
1884	114,344	32,005,819	24,938	5,484,952
1885	128,393	35,950,111	31,336	6,267,377
1886	132,130	31,711,604	35,312	6,350,731
1887	109,164	52,749,315	30,447	6,698,408
1888	131,743	44,858,606	28,054	5,610,923
1889	141,769	56,709,774	36,376	11,386,593
1890 (9 months)	102,550	70,447,903	18,522	9,426,559

It is necessary to state that the values for the last four years are stated in paper currency, which now is only worth about 40 cents to the dollar.

TO WHAT COUNTRIES EXPORTED.—The countries to which the wool clip of 1889 was exported will appear from the following table:

COUNTRIES.	WOOL (UNWASHED).		SHEEPSKINS.	
	Quantity.	Value.	Quantity.	Value.
	Tons.	*Dollars.*	*Tons.*	*Dollars.*
Germany	34,295	13,718,318	1,240	388,176
Belgium	30,578	12,231,472	1,114	348,718
Brazil	11	4,424	.....	.....
Spain	11	4,713	53	16,604
United States	5,106	2,042,506	.....	.....
France	61,244	24,497,670	27,715	8,674,931
Italy	1,615	646,269	3,010	942,305
Holland	14	5,952	.....	.....
Portugal	21	8,462	.....	.....
Great Britain	4,796	1,918,426	2,014	630,477
Uruguay	1,672	668,884	943	295,268
Not named	2,406	962,678	287	90,114
Total	141,769	56,709,774	36,376	11,386,593

The wool included in the foregoing returns was all fine clothing varieties except that which was shipped to the United States. The latter was carpet wool, raised from "criolla" sheep in the upper provinces and shipped from the port of Rosario to Boston.

In 1890 Mr. B. Lorenzo Hill presented certain estimates on the wool interests of Uruguay to U. S. Consul Hill at Montevideo. The number of sheep in October, 1889, was estimated at 12,000,000, or 30 per cent less than 1888. The wool clip was estimated at 42,000,000 pounds, of the qualities of Merino and English, and their cross called Mestizo. The value of the clip was 17 cents a pound on the average. It was exported to France, Germany, England, and a small quantity to the United States. The average yield of wool per sheep is about 3½ pounds. The percentage of dirt and grease in wool is from 25 to 30 per cent. The grade of wool has been improving very considerably the last few years. Foreign sheep are being introduced, not extensively, but steadily. The wool inclines to Merino, English, or Lincoln, and the Downs, and their cross.

a Since the year 1864 a considerable quantity of wool has each year been imported into Victoria across the Murray from the Riverina district of New South Wales, for export by railway to Melbourne and shipment thence. Prior to 1872 no precise record of the quantity so introduced was kept at the customs. It has, however, been ascertained that at least 13,000,000 pounds of wool, valued at £972,000, crossed the Murray into Victoria in the year 1870, and the following amounts in the years named:

YEARS.	Quantity.	Value.	YEARS.	Quantity.	Value.

1891	90,776,713	3,372,154	903,657	164,805,907	7,165,092
1892	86,144,501	3,134,917	655,411	165,590,377	6,619,141

Latterly a much larger proportion of greasy wool has been exported than formerly (*a*), showing a reduced value, it is true, but one of much less extent than when the wool is considered as a whole, without reference to its condition when exported. The following table shows the quantity and declared value of greasy wool exported in the years 1880–1890:

YEARS.	Quantity.	Value.	Per pound.	YEARS.	Quantity.	Value.	Per pound.
	Pounds.	£.	*d.*		*Pounds.*	£.	*d.*
1880	76,808,471	3,616,981	11.3	1888	99,685,415	4,022,032	9.7
1885	83,927,788	3,478,404	9.9	1889	113,699,150	4,560,861	9.6
1836	82,473,370	3,324,839	9.7	1890	113,157,230	4,742,739	10.1
1887	91,635,136	3,538,195	9.3				

The quantity of greasy wool, it will be observed, exported in 1890 was much higher than in any previous year shown except 1889, and the total value of such wool was higher than in any of those years. The average price of greasy wool in 1890, although higher than in the previous five years, shows a decline as compared with 1880, of $1\frac{1}{5}$ *d.* a pound, or of about 11 per cent. (*b*)

a The proportion of greasy to all kinds of wool exported was 68 per cent in 1880, 79 per cent in 1885, 76 per cent in 1886, 80 per cent in 1887, 84 per cent in 1888 and 1889, and 85·5 per cent in 1890.

b Hayter's Victorian Year Book, 1890–'91.
